

Q: Why is the MFT/3-Kapex work height shorter than previous version MFT tables?

A: The MFT/3-Kapex work height allows for an ergonomic work height for use with the Kapex sliding compound miter saw. This work height also brings the base of the Kapex to the perfect level to use the MFT/3 as an extended work support system.

Q: How does the MFT/3-Kapex compare to the old MFT 800?

A: The MFT/3-Kapex is designed to complement the Festool system approach while serving primarily as a stand for the Kapex. It shares a similar indexed grid hole system for clamping operations and serves as a durable, portable, and versatile work platform.

Q: Is there hardware to make the MFT/3-Kapex into an MFT/3?

A: For full MFT functionality the MFT/3 offers greater surface area and capacity so logically there is no hardware to convert the MFT/3-Kapex into a MFT/3.

Q: Do all the clamps work with the MFT/3-Kapex?

A: The FSZ 120 & FSZ 300 screw clamps, the FS-HZ 160 quick clamps, and the clamping elements are all compatible with the MFT/3-Kapex.
