9.1.06 – 10.31.06

Slip clutch protects gears and helps prevent kickbacks

FastFix saw blade changing system

Tool-less adjustment for zero play on the guide rail

Precise depth adjustment to the millimeter

Splinter guard for clean cuts on both sides of blade

TS 75 EQ PLUNGE SAW

Cut through your workload like never before with Festool's new TS 75 plunge-cut saw. Take on bigger projects with our largest cutting depth yet – 2 15/16" or 2 3/4" with the included guide rail. And with 13 amps of adjustable power, the TS 75 has plenty of muscle to spare and so will you, since it weighs less than 14 pounds. A limit stop and slip clutch drastically reduce the effects of kickbacks, making the TS 75 much safer to use. The splinter guard and guide rail make glue-ready cuts a reality. Add it all up and you have a fierce, versatile saw that's easy on the user and tough on everything else. To learn more about the TS 75 and the entire Festool system, contact us or visit your local Festool dealer today.

TS 75 EQ

PLUNGE-CUT SAW

Nearly 3" cutting depth and pure power at your fingertips.

Cut through your workload like never before with Festool's new TS 75 plunge-cut saw. Take on bigger projects with our largest cutting depth yet – 2 15/16" or 2 3/4" with the included guide rail. And with 13 amps of adjustable power, the TS 75 has plenty of muscle to spare – powerful enough to cut through steel doors. And it won't tire you out as quickly since it weighs less than 14 lbs. A limit stop and slip clutch drastically reduce the effects of kickbacks, making the TS 75 much safer to use. The splinter guard and guide rail make glue-ready cuts a reality. Add it all up and you have a fierce, versatile saw that's easy on the user and tough on everything else. To learn more about the TS 75 and the entire Festool system, contact us or visit your local Festool dealer today.

Superior ergonomic design makes this powerful saw nearly effortless to work with.

Rotating dust extractor connector.
360° degree rotation makes it exceptionally easy to adjust the dust extractor to suit your working position.

FastFix saw blade changing system.
The saw blade can now be changed in just a few moves. The allen key is stowed on-board so everything you need is at your fingertips. This new system is quick, safe and easy to use.

Triple motor bearing.
The triple bearing of the motor improves running smoothness and extends the service life.

Exact depth setting.
Allows the cutting depth to be set quickly. The easy-to-read scale allows settings to be accurate to 1mm.

Zero-play guidance.
Once the saw is on the guide rail, no tools are required to adjust the jaws for accurate, zero-play guidance.

Easy-to-reach limit stop.
Always within reach, the limit stop prevents the saw from jolting back when plunged into the material.

Spring-loaded riving knife.
Always there when you need it, always hidden when you don't. The spring-loaded riving knife retracts into the housing automatically when the saw is plunged into the material.

Slip clutch.
With the TS 75, if the saw blade jams, the sliding clutch prevents saw kickback, thereby increasing safety.

Splinter guard on both sides.
The attachable splinter guard and the guide rail make splinter-free cuts on both sides of the blade. This eliminates the need for time-consuming finishing work.
