Driver Bit Sizes

Square Drive (and "Combo" Square Drive) screws are designed so that the driver bits fit snugly into the recess. If they don't, you're probably using the wrong driver bit.

As a guide, our Square Drive screws use the following driver bit sizes, except as noted within the catalog. (In special cases, a non-standard recess is used. For instance, #7 and #8 trim-head screws normally have a #1 recess in order to avoid breakage problems with the undersized head).

Those color bars you see in the driver bit guide below are repeated in the screw price chart so it's easy to match the driver bit to the screw.

Finally, there are really only two sizes of driver bits in common usage: #1 and #2 Square. They fit 90% of the screws you are likely to use – screw sizes #6, #8, and #10. Other bits fit screws designed for rather specialized applications. In fact, the #4 driver bit is such a rare beast that it is virtually manufactured to order. We don't carry screws to fit the bit, but we do carry the bit!

Driver Bit Color Codes

Screw Size	Driver Size	Hand Driver Color (Normally)
#4	#0 Bit	Light Yellow
#5, #6, #7	#1 Bit	Medium Green
#8, #9, #10	#2 Bit	Red
#12, #14	#3 Bit	Black
5/16" & up	#4 Bit	Uncoded

Bit Tip Dimensions

Bit Size	Max	Min	Fraction
#0	0.071	0.0696	1/16+
#1	0.091	0.090	3/32+
#2	0.1126	0.111	7/64+
#3	0.133	0.1315	1/8+
#4	0.191	0.1895	3/16+

The Square Drive Advantage

The Square Drive screw was developed in Canada in 1908 and has been used extensively by US-based commercial furniture manufacturers, as well as the mobile home industry, since the 1950s. It's become the preferred drive type for woodworkers worldwide, and McFeely's is proud to have supplied small cabinet shops and hobbyists for over 35 years!

Here are three reasons to give Square Drive a try:

1. Maximum driving torque, which reduces driver bit "cam-out"

You'll always get maximum torque transfer from the driver, allowing you to pull uncooperative joints tight on the first try! The screws fit the bit so tightly that "cam-out" is virtually eliminated. Unlike when you use a Phillips driver, you won't have to worry about scratching your masterpiece!

2. Decreased "wear and tear" on your driver bits

Driver bits wear out when they "spin" in the screw recess, rounding off their corners and eventually making them useless. Square Drive screws are less prone to "spinning," which helps prolong the life of your driver bits. Plus, only two driver sizes are required to fit the most common Square Drive screws. Oh yeah, did we mention that they last longer, too?

3. Strength, Strength, Strength!

These screws were engineered to meet the demanding requirements of the furniture manufacturing industry. Stronger than steel, McFeely's® screws are heat-treated to reduce breakage, resulting in higher quality screws than found in most local hardware and big box stores. Why use inferior screws when you can use what the professionals use?

The Square Drive Advantage

Square Recess
"The Original"

Combo
Square recess with an advantage

Phillips
Screws prone to cam-out and virtually obsolete

Torx/Star
Many deck screws use this recess

Slotted
Prone to cam-out

HexDrive
Can be male or female hex

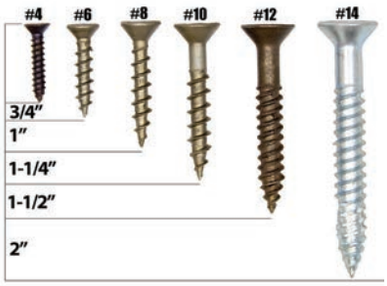

Posi-Drive
Used in euro screws for hinge and drawer slides

Pricing is subject to change at any time due to market fluctuations.

Screw Size Comparisons

Not sure which size you need? The drawings below are as accurate as possible to help in deciding which size is required for your job. In addition, the following guidelines may help you select the proper size:

#4 Designed for very, light duty small crafts, jewelry boxes, hinges, etc. Available in 3/8" to 3/4" lengths.

#6 Light duty designed for small crafts, hinges and drawer slides, children's furniture toys, light duty jigs and fixtures, etc. Available in 1/2" to 1-1/2" lengths.

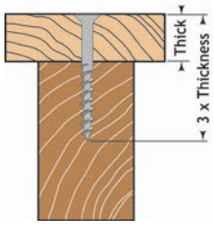

#8 General furniture construction, cabinets, light construction. Good all purpose screw, for furniture construction, cabinets and light construction in 5/8" to 3" lengths.

#10 General construction screw for heavy-duty furniture, outdoor projects, decks, lawn furniture, boat building, etc. are available in 1/4" to 4" lengths.

#12 & 14 For heavy-duty construction, hanging solid-core doors, etc. Available in 3/4" to 6" lengths in selected styles.

Screw Length

Unfortunately, there is really no hard and fast rule concerning the appropriate screw length. Sometimes you don't have much choice as to length because of the joint configuration. In general, the screw should always go through the thinner piece first and thread into the thicker piece.

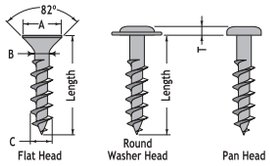

In choosing length, try to have about two-thirds of the screw threaded into the secondary piece, as shown. As the thickness of the lumber or fastener length increases, this ratio can be reduced so that only half of the shank is threaded into the secondary piece. Not coincidentally, only two-thirds of the shank is threaded on most of our 1" and longer screws.

Having said that, our ProMax® screws are designed with the perfect thread configuration for common joints. In general ProMax® screws have a longer than standard unthreaded shank length to ensure that the screw doesn't cross thread at the joint..

Screw Dimensions

We've listed screw dimensions for Production Screws in two forms – a table showing the maximum and minimum decimal dimensions, and a table showing the maximum fractional dimensions. NOTE: The fractional dimensions are the closest approximations to the actual decimal dimensions.

	"A" Flat Head		"A" Pan Head			"A" Round Washer Head			"B" Body Dia		"C" Thread Dia

A Word About Drill Bits

Drilling the correct pilot hole

In addition to their superior performance, Square Drive screws are also easier to install than most "garden variety" hardware store screws. Since the screw shank is straight throughout its entire length (except for the point), drilling a pilot hole with a straight drill bit yields excellent results. The reduced shank diameter at the head means an enlarged body hole isn't necessary. Finally, the straight bit doesn't require the critical depth control needed with a tapered bit.

If you're still using the old style, cut-thread wood screws, tapered-shank drill bits are the only way to go. They fit the profile of the screw almost perfectly, so they provide maximum holding power. In one step, they drill the proper size hole for both the shank and the threaded portions of the screw. The only caution – make sure the hole depth matches the screw penetration into the second piece of wood! Otherwise, the screw may not develop full holding power.

Drill Bit Size Recommendations

Drill bit selection, for Square Drive screws and other fasteners, should take into consideration the material's properties. When using harder materials, or "soft" screws, larger pilot holes are required.

The table is a starting point – a quick technique is to hold a drill bit up to the shank of the screw. If you're breaking screws, try enlarging the pilot hole – even 1/64" will make a difference. Normally, the proper bit is the same size as the shank between the threads. In practice, use a slightly larger bit for hardwoods and a slightly smaller one for soft wood. The root diameter of a Square Drive screw is smaller than that of a standard "wood screw;" pilot recommendations are also smaller.

Square Drive Screws (Use Brad or Standard Point Drill Bits)

Screw	Hardwoods	Softwoods	Plug Sizes
#4	5/64 Pilot	1/16 Pilot	1/4
#6	7/64 Pilot	3/32 Pilot	3/8
#8	1/8 Pilot	7/64 Pilot	3/8
#10	9/64 Pilot	1/8 Pilot	1/2
#12	5/32 Pilot	9/64 Pilot	1/2
#14	11/64 Pilot	5/32 Pilot	1/2

Standard Wood Screws (Using Taper Point Drill Bits)

Screw	Hardwoods	Softwoods	Plug Sizes
#4	7/64 Pilot	3/32 Pilot	1/4
#6	9/64 Pilot	1/8 Pilot	3/8
#8	11/64 Pilot	5/32 Pilot	3/8
#10	13/64 Pilot	3/16 Pilot	1/2
#12	7/32 Pilot	13/64 Pilot	1/2
#14	1/4 Pilot	15/64 Pilot	1/2

SCREW TECHNICAL DETAILS

Standard Thread Styles

Deep Thread: Characterized by a reduced-diameter shank, resulting in a deep thread profile. A single-lead thread means that one revolution advances the screw one pitch. (Pitch is equal to 1 divided by the number of threads per inch. For a screw with 10 threads per inch, one revolution will advance the screw 1/10" into the wood). The deep-thread form provides superior resistance to pull out. The example shown here is the standard hardened-steel Square Drive screw. Typical part number series include FSL, FPL, FRL, etc.

Wood Screw-Style Thread: A single-lead, extra thick thread that is used primarily on solid brass or silicon bronze screws to accommodate the limitations of these soft materials. Unlike the traditional wood screw thread, the shank is of uniform diameter throughout most of its length. (Many wood screws are tapered; see Tapered Wood Thread below).

Double Lead: Two threads are wrapped around the shank. One revolution advances the screw two pitch lengths – advantageous on long screws or in situations requiring rapid assembly. Drywall screws typically use this thread, since pull out strength isn't as important as speed. These screws lack the pull out resistance of deep-thread screws. Typically, #8 and #10 screws 4" and longer use this thread because of the increased strength afforded by the larger shank

Tapping Style Thread: Also known as "Type A" or "Wood Tapping," this is basically a sheet-metal-type thread. It is a single-lead, fine-thread design (meaning more threads per inch). Also, the thread form is basically an "equilateral" triangle, instead of the special "flattened" triangular thread used for "deep" threads. Generally, the entire screw shank is threaded.

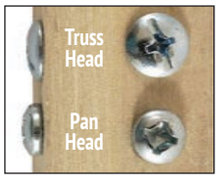

Tapered Wood Thread: Unlike modern extruded thread screws, cut-thread wood screws have a uniform diameter throughout the length of the shank. That is because the screw threads are cut into the shank so that they increase in depth toward the point. This gives the illusion of a tapered screw. Available in solid brass and bronze only.

Head Style

Flat Head: This is the most common screwhead type used for general fastening when the screwhead will be flush with the surface or when it will be counter sunk and the hole plugged. Flat heads are generally an 82° taper but may also have a bugle-style taper. Also available in the widest range of sizes, platings and materials. This type of screw may be used with a trim washer to convert to a "pan head." The one screw to have if you can choose only one!

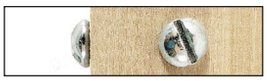

Pan Head: Pan heads are dome-shaped and protrude above the surface of the wood. The flat surface under the head is called the bearing surface and this head style is often used to attach metal or plastic hardware parts to wood. The higher head profile provides a deep recess that makes this head style easier to drive. The flat bearing surface also reduces over-penetration when the head is used directly against wood surfaces.

Truss Head: This head style is very similar to the pan head but has a lower profile and a slightly larger bearing surface. Since the head profile is lower, the recess is shallower and sometimes is more difficult for the worker to keep the drive tool engaged in the recess. Some drawer slides require a lower head height so the screw head will not interfere with the passage or the slide roller. The lower head is also less obtrusive when seen in the finished product. Most 8-32 machine screws used for attaching drawer knobs and pulls have a truss head design.

Trim Head: The trim head screw resembles a finishing nail in both appearance and function. The head for a #4 screw is used on either a #6 or #7 screw permitting the screw to countersink itself, just like a finishing nail. The small head size requires extra care with the driver bit.

Round Washer Head: A washer is formed as part of the head itself, providing a larger bearing area that is especially useful when fastening soft materials. They are commonly used when hanging kitchen and bathroom cabinets and are often used for pocket-hole joinery in exterior projects.

Super Round Washer Head: Known as drawer front screws because of their common use in attaching drawer front to box style drawers, Available in three sizes: #8 x 1", 1-1/8", and 1-1/4".

Traditional Wood Screw vs. Modern Production Screw

The difference between a traditional wood screw and a modern production screw is found in the sizing differences between the diameter of the screw shank and the screw threads.

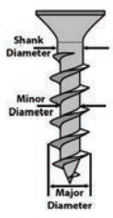

Traditional Wood Screws: The shank diameter on this screw exactly matches the outside dimensions of the threads. Threads on these screws are deeper near the point and begin to shallow as they get closer to the unthreaded shank or screw head. Tapered drill bits are needed with this type of screw, as the pilot hole should fit the outside shank diameter of the screw almost perfectly. Creating this tight fit on traditional wood screws yields maximum holding power.

Modern Production Screws: The shank diameter is actually smaller than the major diameter but larger than the minor diameter. The overall reduced shank diameter results in a deep thread profile offering great holding power. Drilling a pilot with a straight drill bit yields excellent results because the shank of the screw is straight throughout its entire length. The advantages of this are that straight bits do not require the same critical depth control needed with a tapered bit.

- Minor Diameter: Measurement of the body of the screw between the threads (one side to the other) – Smaller than major diameter and shank diameter
- Major Diameter: Measurement of the outside of the thread (one side to the other) – Larger than shank diameter and minor diameter
- Shank Diameter: Measurement of the bare shank (one side to the other) – Larger than minor diameter but smaller than the major diameter

McFeely's

Fastener Materials

It shouldn't surprise you to hear that there is no single best material for making screws, just as there is no single best fishing lure or garden fertilizer. It all depends upon the application. Of course, hardened-steel screws are the workhorse for many situations but are entirely unsuitable for most exterior applications unless properly coated or plated. The following overview shows what materials are available.

Unplated Hardened-Steel screws are the most popular. They will not be visible or exposed to corrosive conditions. Their Color variations from almost pure black to bronze to silvery gray does not affect quality. It is simply a result of pross variable interaction as simple as the screw's location on the heat treated furnace conveyer belt. All McFeely's® unplated screws receive a dry lube coating , which reduces driving torque requirements but provides virtually no corrosion-resisitance. Hardened steel screws are the base stock for all of our plated screws.

Unplated Hardened Steel

Stainless Steel provides the ultimate corrosion-resistance for most woodworking projects. They are softer than our hardened-steel screws because stainless steel is not generally heat-treatable – the wire must be soft enough to be formed yet hard enough to provide the desired strength. We carry stainless steel in a variety of grades. **Note** that not all grades are designed to be completely "stainless!"

Stainless Steel (305)

Solid Brass screws are also very soft and virtually demand a carefully sized pilot hole to eliminate installation breakage. (Pre-threading the hole with a steel screw helps minimize this problem). A Square recess really makes a difference with these screws. The softness of the brass greatly increases cam-out problems with most other driver types, a situation neatly overcome by the Square recess.

Solid Brass

Silicon Bronze screws are primarily used for marine boat building, although many people have used them to build decks made of Western Red Cedar or Redwood because the screws will eventually blend into the color of the wood. As pictured, screws right off the production line are generally the color of a fresh penny. After they've been around awhile, they oxidize and darken.

"Oxidized" "Fresh"
Silicon Bronze

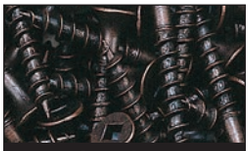

Fastener Finishes

Selecting the proper finish for your screws is a new experience for many woodworkers. After all, most of the time you don't have a choice! If you don't like bright zinc, or it isn't suitable, it's just tough luck. We offer a wide variety of finishes and materials to make sure you have the most appropriate fastener for your task! The index at right identifies which screw types are available in selected finishes.

Black screws have a dull, graying black appearance. It is a common surface preparation for further coating or painting. It is porous with excellent adhesion and the standard finish for drywall screws. This coating is stronger than the oxide, so the screws do not rust on the 3–4-week boat ride but it does not have the same shinny finish.

Black

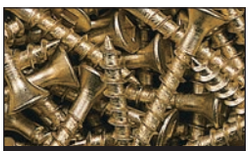

Statuary Bronze is also a decorative finish designed to match the antique appearance of old cabinet hardware. It's primarily, dark bronze with highlights of copper. Highlights increase on screws exposed to wear or abrasion.

Statuary Bronze

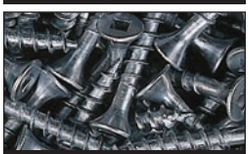

Yellow Zinc resembles bright brass plating but appears more iridescent. It offers a modest amount of corrosion-resistance (approximately 100 hours' salt spray to 10% red rust). It is basically a secondary "colored" plating that is plated on top of a clear zinc base, hence the additional corrosion protection.

Yellow Zinc

Bright Brass is a purely decorative finish designed to generally match the color of most cabinet hardware. It provides little corrosion-resistance. Although in highly acidic woods like Red Oak, it can prevent the dark blue stains that sometimes form around an unplated screw.

Bright Brass

Clear Zinc is another largely decorative plating, although it does offer a salt spray rating of 10% red rust to about 50 hours. A good choice for interior applications when working with acidic woods like Red/White Oak or when the screw will be countersunk and plugged. It is a poor choice for most exterior applications.

Clear Zinc

NoCoRode Plus is one of the more corrosion-resistant plating we offer. In manufacturer conducted, salt-spray testing, it has exceeded 1,800 hours. Thus, making it almost 20 times more corrosion-resistant than standard yellow zinc plating. ... stainless! Unlike the plating on hot, dipped galvanized screws, NoCoRode Plus doesn't chip. You won't find the recesses full of plating material that makes the fasteners useless. Best of all, the plating is tan colored, so it "blends" with many pressure-treated materials.

"I thought I could make up any shortage by buying similar screws at the local home-improvement store. Driving 3" screws is no fun when they are too soft or the recess doesn't fit tight enough, even with the bit shipped with the screws. Don't know what the difference actually is, but McFeely's hardware just works better."

Dubya, Claremore, OK

SCREW ASSORTMENTS

A

Wood Worker Screw Kit for Your Shop A

Limited Quantities - Get them while supplies last!

Once you use McFeely's square-drive screws, you will wonder how you got along without them. But not all square-drive screws are alike. Field tested in the demanding furniture manufacturing industry, McFeely's Square-drive screws are stronger and easier to drive. Unlike inferior screws, McFeely's screws are far less likely to break or to have head-stripping issues.

Deep Thread: Characterized by a reduced diameter shank resulting in a deep thread profile. A single lead thread, meaning that one revolution advances the screw one pitch. (Pitch is equal to 1 divided by the number of threads per inch. For a screw with 10 threads per in., one revolution will advance the screw 1/10 in. into the wood.)

The deep thread form provides superior resistance to pull-out.

Our Unplated Dry Lube finish is a dry to the touch lubricant that offers a reduction in driving torque and a finish that does not interfere with dust collection systems or bleed during the staining process of fine woodworking. McFeely's offers a wide variety in Unplated Dry Lube or "lube" finish. More economical than plated parts they are a popular choice with professional woodworkers. They are a brownish color that allows them to blend well into wood.

Once you use McFeely's square-drive screws, you will wonder how you got along without them. But not all square-drive screws are alike. Field tested in the demanding furniture manufacturing industry, McFeely's Square-drive screws are stronger and easier to drive. B

"Getting to Know Them" Assortments B

Our flat-head steel assortments provide a fine introduction to the Square Drive screw. Each assortment includes screws of just one wire diameter. Included are 100 screws in each of six different lengths (600 screws in all), a ¼" power driver bit, and a hand screwdriver. The power driver bit will fit a Jacobs® chuck, a screwdriver, or the Make-it- Snappy® quick change chuck system.

Optional heavy-duty plastic storage bins are self-stacking for workbench convenience or may be wall-mounted using the optional brackets. In either configuration, they are easily carried to the job site. Screws are boxed. **Specify bin color:** Green, Red, Yellow or Blue. Imported.

Note: All of our assortments contain only Robertson® Square Drive screws. Combo Drive screws are not included in the flat head assortments.

FSC-6054	Screw Wax	$8.06

E

FastCap® PowerHead Screw Kit F

Try out our popular FastCap Power Head Screws and related items in this screw assortment. The 9/16" Diameter Head Won't "Pull-Though" and FastCaps fit perfectly. Anyone that has worked with Melamine, particle board, or MDF knows how easy it is to overdrive a screw and sink it well below the surface. FastCap's PowerHead screws have big 9/16" diameter heads designed to prevent that very thing. Nibs beneath the head allow the screws to seat perfectly flush, or to be left proud of the surface. In most cases, the self-drilling Type 17 auger point allows them to drive easily in hardwoods and softwoods, without the need for a pilot hole. When used with FastCap's FlushMount Drill Bit, the screw head can be hidden perfectly behind a peel-and-stick FastCap. Imported.

Kit Includes: (1) ProHold, (1) PVC Sample Color Chain, (1) Plastic Case w/ Adjustable Compartments, (20) .42" screws Phillips or #1 square drive combo, (15) 1.125" screws, (15) 1.25" screws, (15) 2.5" screws, (12) 3" screws, (12) 3" screws for Metal Studs, (10) 3.5" screws, (10) 4" screws, (16) 3/8" white FastCaps, (6) 9/16" white FastCaps, (6) 9/16" Almond FastCaps, (6) 9/16" Hardrock Maple FastCaps, (6) 9/16" Unfinished Red Oak FastCaps, and (6) 9/16" Unfinished Maple FastCaps

Auger Point 305 Stainless Assortment A

Most woodworkers don't need stainless steel screws very often. That's why there aren't any around when they're needed, and any project requiring just a few stainless steel screws will be too urgent to delay until the next order from McFeely's! Avoid the frustration, put one of these 305 stainless steel screw assortments in your workshop so you'll have them on hand! You'll get 600 of our auger-point flat head stainless steel Square Drive screws – 100 screws in each of six popular sizes, plus a hand screwdriver and #2 driver bit. Optional bins stack or wall mount. Screws are boxed. **Specify bin color:** Green, Red, Yellow, or Blue. Imported.

BINS-BRKT	Wall Brackets	$13.31

Black Flat-Head Screw Assortment B

Black screws are an excellent finish for both decorative and functionality.
The black finish comes from a chemical "conversion coating" for metal, where the surface is subjected to an electrochemical or chemical process, leaving a coating on the metal and converting it into a protective and decorative coating. This process adds an additional level of mild corrosion resistance along with the aesthetic or decorative appearance and minimizes the reflection of light off the surface.
Plain or non-plated screws can have a variation in appearance that occurs at the time of heat-treating. The appearance can vary from a silver-gray steel look to a bronze look. This variation in appearance does not affect the performance of the screw.
INCLUDES:
(100) - 0604-FSB - 6 x ½ in. Wood Screws
(100) - 0605-FSB - 6 x 5/8 in. Wood Screws
(100) - 0606-FSB - 6 x ¾ in. Wood Screws
(100) - 0610-FSB - 6 x 1 in. Wood Screws
(100) - 0612-FSB - 6 x 1-¼ in. Wood Screws
(100) - 0614-FSB - 6 x 1-½ in. Wood Screws
- HX-0125 - #1 x 2 in. Green Square-Drive bit
- KLT-0661 - #1 x 4 in. Klein Hand Driver

Part #	Recess Style	Bit SIze	Qty/Pk	Price
0600-FSB-A	Square	#1	1	$55.77

#6 Head Dry-Lube Wood Screw Assortment C

Once you use McFeely's square-drive screws, you will wonder how you got along without them. But not all square-drive screws are alike. Field tested in the demanding furniture manufacturing industry, McFeely's genuine Robertson® Square-drive screws are stronger and easier to drive. Unlike inferior screws, McFeely's screws are far less likely to break or to have head-stripping issues.
The deep thread form provides superior resistance to pull-out.
(100) - 0604-FSL - 6 x ½ in. Wood Screws
(100) - 0605-FSL - 6 x 5/8 in. Wood Screws
(100) - 0606-FSL - 6 x ¾ in. Wood Screws
(100) - 0610-FSL - 6 x 1 in. Wood Screws
(100) - 0612-FSL - 6 x 1-¼ in. Wood Screws
(100) - 0614-FSL - 6 x 1-½ in. Wood Screws
- HX-0125 - #1 x 2 in. Square-Drive bit
- KLT-0661 - #1 x 4 in. Klein Hand Driver
- Set of Bin Labels

POWER DRIVER BITS

Wire Detent

Color Coded Driver Bits™ E

Tough two-piece design for long life, 1" to 6" lengths for convenience

Our best hex shank power driver bits are perfect for use in drill chucks or magnetic bit holders (wire detent only). Their unique two-piece design features a hardened tip swaged into a mild steel body, giving each bit maximum strength and durability. Driver sizes #0, #1, and #2 have durable-colored plating for easy identification. Imported.

F

Double Ended Square Drive Bits F

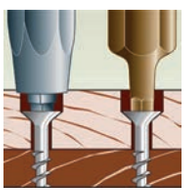

Talk about convenience! When you need to change bit sizes, pop the bit out of the drill chuck, flip it around, and tighten the chuck, and you're ready to go again. Be careful! When putting these in your drill, the internal workings of some drill chucks have a tendency to "eat" the end that is in the chuck if inserted to full depth! These bits have a standard ¼" hex body and are approximately 1-½ "L. **Note:** These are only designed for use directly in the drill chuck. They do not have a ball or wire detent and do not fit the 4-in-1 hand drivers!

Part #	Description	Price
HDQ-1020	#1 and #2 Double Bit	$5.55

Reduced-Shank Square Drive - Ball Detent

Reduced-Shank Square Drive - Wire Detent

Reduced Shank Square Drive Bits G

Extended tip protects pilot holes

Has your driver bit ever destroyed the wood surface around a countersunk #4 or #6 screw? Standard power driver bits are sometimes too large to fit into a ¼"-dia–countersunk hole to drive a recessed screw (see illustration). The driver bit body makes a mess of the wood surrounding the hole. Normally, this is only a problem when using a ¼"-dia. countersink with #4 and #6 screws. The solution is simple – use a driver bit with an extended tapered tip. One-piece bits are usually a disappointing compromise between the need for a hardened tip and a durable body, but a special heat-treating process makes these stronger.

Part #	Size	Bit Size	Price
HRS-0010	#0 x 1"	#0	$0.57
HRS-0020	#0 x 1-15/16"	#0	$1.13

HRS-0320	#3 x 2"	#3	$0.99

Combo Ball Detent Bit

Combo Wire Detent Bit

H

Bosch Combo Bits H

Bosch recently introduced the next generation of Combo Bit drivers. The patented P2+R2 driver bit will run both #2 Phillips and #2 Robertson Square Drive bits without changing drivers. Made from S2M-grade steel for durability, the unique tip engages and securely drives screws with Robertson Square recess, Phillips recess, or Combo recess. One-bit drives are almost two-thirds of the screws you will ever drive. Available in a 1" insert bit singly or in a 15-piece bit set. It is also available in a powerstyle ball detent bit at 1-½"L or 2" L. Imported.

Part #	Description	Price
HCD-2000	1" P2R2 Insert Bit 15-Piece Set (wire detent)	$11.98
HCD-0220	2" P2R2 Power Bit (ball detent)	$1.30

POWER DRIVER BITS

NoCoRode Ball Detent

NoCoRode Driver Bits A

Undersized bits designed for our NoCoRode Plus screws

NoCoRode Plus screws have significantly more plating on them than most other corrosion-resistant screws, and that's the way we want it. The extra thickness increases the fastener's life considerably. However, because of production variables, the coating is sometimes thick enough to affect driver bit fit. We would instead go a little overboard than underplate the screws and shorten the fastener's life. NoCoRode Drivers have slightly undersized tips and fit the plated recess of a NoCoRode Plus screw perfectly. Imported.

Part #	Size	Bit Size	Detent Type	Qty	Price
HX-0212	#2 x 1"	#2 NoCoRode	Wire	(1) Each	$1.51

Ball Hex Drive Wire Detent Bit

Ball Hex Drive Bits D

Reach the "unreachable" screw!

It's amazing how often a product is assembled in such a manner that major disassembly is the only way to access the one fastener standing between you and success. These nifty, ball-ended bits fit standard hex recess fasteners but allow the driver bit to access the recess up to the 25° off-axis. Imported. **Note:** The nature of the ball tip reduces driver-bit strength!

Phillips® ACR® Ball Detent Style | Phillips® ACR® Wire Detent Style

Phillips® ACR® Bits E

If you have to use them, use the best!

Even die-hard Square Drive woodworkers need to remove Phillips screws occasionally. When that happens, Phillips ACR is the only way to go. Ribs on the driver tips improve the grip and help prevent cam out. Note that the screw sizes listed below are not absolute. The overlap between #2 and #3-bit sizes is due to the variation in screw head styles and the amount of material available for the recess. Imported.

Tech Tip

A Word on Driver Bits

Depending on the driver size, bits are available in lengths from 1" to 6". Note that 1" L wire detent bits are designed exclusively for use in magnetic bit holders; longer ball detent bits fit any bit holder using the standard 1/4" hex ball detent design. Do not use ball detent bits in standard magnetic bit holders designed for wire detent bits. **The ball detent causes them to become permanently stuck!** Don't ask us how we know that.

Pricing is subject to change at any time due to market fluctuations.

Hex Drive Ball Detent Bit

H

Hex Drive Wire Detent Bit

Hex Drive (Allen) Bits H

Used in appliances, autos and machinery

Hex (Allen) recess fasteners have been used in a wide variety of machinery products for many years and are commonly found in RTA (ready to assemble) furniture. These bits are available in 1"L wire detent (insert) style bits as well as 2"L (nominal length) power driver bits for direct use in quick change chucks or Jacobs®-style drill chucks. They are also known as "socket head insert bits." Imported.

PoziDrive Ball Detent

I

PoziDrive Wire Detent

PoziDrive Drive Bits I

Popular for Euro-style hardware

Euro-style hardware has become virtually standardized on the PoziDrive recess for mounting everything from drawer slides to hinges. In addition, most adjustment screws on Euro hardware are PoziDrive as well. While a Phillips driver can be used, most woodworkers will find that a PoziDrive bit will provide more positive engagement and satisfactory results. Imported. **Note:** Some #10 screws take a #2 bit, and some require a #3 bit.

J

One Way Screw Remover/Installer J

Tamper-Resistant, Irreversible and Clutch head security screws are names for screws with Truss head that has special features that allow it to be tightened using a flat blade screws driver. Half of the slot is replaced with a slop that allows the screw to be driven clockwise and not removed because of the slop on the sloping head face when turning counterclockwise. These types of screws are designed to be a permanent attachment and never undone. Circumstances happen, and these screws need to be removed using a common screwdriver that will fail because of the head design. This tool can be used to install and remove these types of screws as well as stripped hex bolts and nuts.

Is Bigger Always Better?

Drill drivers are best for precision work, smaller holes, and screws under three inches. They offer adjustable speeds and a clutch for control. Impact drivers, on the other hand, are built for speed and power—ideal for repetitive tasks or driving fasteners over three inches. While powerful (1,300+ in/lbs torque, 3,200 BPM), impact drivers lack a clutch and can easily overpower small jobs. Use a drill driver when accuracy matters, and reserve the impact driver for heavy-duty work to avoid damaging materials, bits, or fasteners. Right tool, right task—it'll save time, tools, and your patience.

FLAT-HEAD SCREWS

A

B

Flat-Head Steel Screws A

Try the real thing!

Flat Head Steel Screws One Square Drive/Combo screws are heat-treated for exceptional strength. Most sizes have a deep thread pattern that gives them incredible holding power. For easier installation, these screws receive a special "dry-film" lubricant to help reduce driving-torque requirements. They are unplated, so the color varies from black to steely gray.

Clear Zinc and Yellow Zinc Plated Flat Head Robertson Square Drive C

Clear zinc plated screws have the bright silvery finish common in wood screws and bolts. They offer mild corrosion-resistance. They are ideal for visible interior uses or when the material fastened is subject to staining from unplated fasteners (such as Red or White Oak lumber). Whether it's for their brassy yellow color or for the increased corrosion-resistance compared to clear zinc-plated screws, yellow zinc is one of our most popular styles. An additional plating step gives them a characteristic "yellow" color and more than doubles their corrosion-resistance. They are a popular alternative to brass-plated screws because of their corrosion-resistance and similar coloration. These are heat-treated and then plated for moderate corrosion-resistance.

NoCoRode Plus Flat-Head Screws D

Economical solution for when you're not using lifetime materials

These hardened steel screws are plated with our NoCoRode Plus finish for superior corrosion resistance. Compared to normal zinc plated screws, this makes them an exceptional value for most nonmarine exterior applications. Due to usage variables, we cannot guarantee the screws against corrosion. Use NoCoRode undersized driver bits for best results. Imported.

NoCoRode – More Corrosion Resistance "Plus" Camouflage!

Our unique NoCoRode plating process is now more corro-sion-- resistance than ever, especially in a process designed to provide industry-leading resistance without the recess buildup that makes installation so frustrating. Using these screws with Cedar or Redwood siding generally results in staining. Stainless screws are a better choice..

FLAT-HEAD SCREWS

A

B

Black Flat Head Screws A

For that high-tech look or when you don't want to see a silvery screw head, black coated screws are just the ticket. Black coating offers very little corrosion-resistance, so use in humid environments. Wood with a high moisture content or highly acidic woods like White Oak may result in discoloration. Black coating does not result in a true solid black color but may result in a slight bronze or copper color showing through the black oxidation. Imported.

Solid Brass Flat-Head Square Drive Screws B

These cut thread solid brass Square Drive screws are ideal for installing solid brass cabinet and door hardware. As soft as brass is, you need all the advantages of a Square Drive to avoid damaging the screws, the hardware or the woodwork! Since they are solid brass, the screws are easily buffed to a high gloss. Just spray them with a quick coat of clear lacquer to preserve the shine. Imported.

Tech Tip

Pre-Thread the Hole

When installing solid brass or silicon bronze screws, clamp the work together tightly, drill an undersized pilot hole (1/64" to 1/32" under), then drive a steel screw (like our FSLs) of the same size as the brass screw to cut threads. Remove the steel screw and install the correct screw, being careful not to over-torque it. Lubricate the screw before installation with FastCap screw was FSC-6054. An alternative to pre-threading is to drill a pilot hole larger than the screw shank by 1/64" to 1/32".

McFeely's

Boat Building Silicon Bronze Flat Head Screws C

Designed specifically for boat building, these marine grade silicon bronze screws have cut threads and the full body diameter shank preferred by boat builders. Unlike our rolled thread steel screws with their reduced shank, the shank diameter below the head is the same diameter as the outside of the threads. This completely fills the clearance hole normally drilled for the shank, thus creating a seal. Made of marine grade alloy 651 silicon bronze for dependable corrosion- resistance. Remember to drill a body hole for the screw shank and a pilot hole for the threads. All screws are threaded for two-thirds of the shank. Imported.

Tech Tip

Cut Thread vs. Rolled Thread

Cut thread is the oldest way of making screws. These are called "Traditional Screws." Cut thread uses a larger diameter wire and cuts material away for the thread. Cut threads generally require tapered drill bits to ensure proper holding power. The only cut thread screws we carry are the Flat Head Slotted Brass FSW, the Silicon Bronze Boat Building Screw SFC, and the Brass Cut thread BFC lines. Rolled thread, or "Production Screws," uses smaller wire and rolls the wire through dies to squeeze the threads onto the shaft. Rolled threads produce threads proud to the shank of the screw. This is what is called "Deep Threads," and it tends to hold better with thread depth consistent along the shank. Using a Straight Drill bit for the pilot hole gives the Deep threads holding power along the entire length of the threads. If you use a Tapered Drill bit to drill pilot holes for Production Screws, only the threads near the point will be holding your work together.

FLAT-HEAD SCREWS

A

B

Flat-Head Wood Screw Solid Brass A

These screws have Traditional machine-cut threads with a tapered shank, so occasionally there are clamp marks on the shank beneath the head. Also, since the threads are cut from uniform diameter wire, threads near the head are not full depth and do not come to a sharp point.

Brass screws provide a more aesthetically pleasing look as it offers a softer tan coloring that works well with wood. Typically, they are used when building furniture or installing doors, etc.

Stripping brass screws occur when working with wood, so we recommend using a Tapered Drill Bit to match the shank to drill a hole into the material first. The use of a pilot holes that are the same diameter as the unthreaded part of the brass screw helps avoid stripping and ensures the screw offers maximum strength and load capacity.

Brass is inherently a softer metal, and as a result, more care must be used to avoid damaging the recess and the screw. It is also beneficial to use a screwdriver that fits the head of the screw exactly.

Please remember that brass is fairly soft and requires carefully drilled pilot holes to avoid breakage problems.

SPAX T-STAR plus Flat Head B

Multi-Purpose Structural Screws

A multi-purpose structural screw with functional qualities that let you drive faster, install easier, and reduce splitting wood. The SPAX® T-STAR plus Flat Head has a patented MULTIhead that countersinks the screw head flush in the wood. The exclusive SPAX ®T-STAR plus Drive offers superior bit engagement to prevent stripping and damaging your screw.

Big Timber BTX Exterior Multi-Purpose Wood Screw C

Big Timber - Mountain tested since 1945. Professional Grade Fasteners for Pros and Weekend Warriors have secured our place as the top fastener brand.

Heat-treated hardened steel for high tensile strength and high shear strength

Triple Layer ACQ Compatible Bronze Coating for Exterior or Interior use

Deep Six Lobe Star Drive Recess reduces cam out end load

Handles 2X the torque as Phillips or Square Drive while extending the life of the bit

Underhead cutting nibs to aid in self-countersinking

Aggressive knurl enlarges hole to reduce splitting and drag to help draw lumber together

V Cut notches on threads to cut fibers for easier insertion at lower torque

Type 17 tip for faster precise starts which eliminates "walking" -Provides easier insertion without pre-drilling

Aggressive thread for great withdrawal strength

Structural Wood Screw - Backed by certified independent testing (TER 1911 01)

International Building Code and International Residential Code Compliant

SPAX® SCREWS

SPAX® – The Next Generation of Advanced Screw Technology

It takes a special screw to make us sit up and take notice! After all, McFeely's(R) has been in this business for more than 30 years. Spax (R) screws have a unique and patented technology, precision German engineering, and usefulness in a broader range of materials from softwoods to plastics to thin sheet metal. They definitely grabbed our attention. At McFeely's, we like to call the SPAX screw the "fastener of the future." What makes this screw so innovative is its combination of a fully-threaded shank (for most versions) with a patented serration pattern, a patented head style called the MULTIhead™ (DHX, FYX and #10 and smaller FZX), and a patented point called the 4CUT™ (which eliminates predrilling and splitting because of its square end that divides wood fibers on DHX, FYX, CBX, PZX and #10 and smaller FZX). SPAX screws are available with a flat, trim, or pan head and clear or yellow zinc plating or stainless steel. Imported.

SPAX® Advanced Screw Technology:

Countersinks the head flush in most materials

Quicker and easier fastening

Eliminates pre-drilling and splitting of wood fibers

Tech Tip

A Cautionary Note on Usage

The combination of the 4CUT (tm) point and serrated thread is compelling enough to eliminate pre-drilling unless you're driving in masonry or sheet metal thicker than 24 ga. The fully threaded versions of the SPAX® screw do not allow for as much adjustment. As you may be accustomed to having. The thread forms mechanical attachment in both horizontal and vertical planes. While this is great for fastening items overhead, you may want to measure twice before using these screws. They're advanced fasteners for advanced woodworkers. There are few screws, if any, that provide as sound a joint as these!

Trim Head with Cutting Ribs

T-STAR plus Drive

Patented Serrations

Unique Cut™ Point

T-Star plus Trim Head Screws for MDF and Fiberboard

SPAX T-Star plus zinc trim head MDF/Fiberboard screws are specifically designed to prevent splitting in medium density fiberboard (MDF) and hardwoods without pre-drilling. Our T-Star trim head specialty screws are also effective for attaching lightweight, high-density polyurethane trim.

- UNIQUE CUT™ Point and patented thread serrations prevent splitting without pre-drilling.
- T-Star plus drive provides superior bit engagement.
- Mini flat head / trim head design with cutting ribs under the head allows for a clean look flush or countersunk installation.

C

Spax® Lag Screws C

Goodbye Conventional Lags!

SPAX PowerLags offers the industry's largest selection of code-recognized structural wood-to-wood fasteners. Featuring SPAX patented thread technology, they require no pre-drilling and drive faster and easier than conventional lags and other structural screws.The washer-like head of the screw enlarges the contact surface on the workpiece, thus guaranteeing considerably higher tightening torques compared to a countersunk screw. The SPAX washer head enables better tightening of joints between pieces of wood. The washer head is available for SPAX screws with an outer thread diameter of 5.0 mm.

SPAX Interior Lag Screws, Washer Head, Yellow Zinc, T-30 Star Drive

D

Goodbye Conventional Lags!
SPAX PowerLags offers the industry's largest selection of code-recognized structural wood-to-wood fasteners. Featuring SPAX patented thread technology, they require no pre-drilling and drive faster and easier than conventional lags and other structural screws.
Washer head: The washer-like head of the screw enlarges the contact surface on the workpiece, thus guaranteeing considerably higher tightening torques compared to a countersunk screw. The SPAX washer head enables better tightening of joints between pieces of wood. The washer head is available for SPAX screws with an outer thread diameter of 5.0 mm.
SPAX® 4CUT® point: The 4CUT® point enables fastening without pre-drilling (depending on the wood). This is achieved through its special screw tip. The arrow shape pushes through the wood fibers, ensuring a fast grip. This effectively prevents the material from splitting and reduces the insertion moment. For hardwoods, we recommend pre-drilling even when using SPAX with 4CUT.

#8 ProMaster® Round Washer Head Sawtooth Screws A

A *Actually cut their own threads!*

ProMaster® flat head screw performance is now available in #8 round washer head screws and in a variety of plating to suit almost any application! Sawtooth threads near the tip help the screw cut its way into the wood and increase holding power. Pilot holes are still recommended for fine cabinetry, though. Screws act like a wedge to force the wood fibers apart. The pilot hole removes the excess material, so the screw's sole function is clamping. Primarily decorative for interior applications in acidic woods like White Oak, the black coating and the yellow-zinc and statuary-bronze plating provide some protection against staining. Use NoCoRode Plus mechanically galvanized screws for economical corrosion resistance in exterior applications, and use the dry lube screws where the fastener is not exposed. Due to usage variables, we cannot guarantee these screws against corrosion. Currently available in #8 only. Imported.

PROMASTER® & WASHER-HEAD SCREWS

#10 Deep Thread Round Washer Head Screws B

Round washer head screws are great for hanging kitchen cabinets, attaching furniture hardware, and thousands of other applications requiring an oversized, flat-bearing surface under the head. When the screw will be exposed or subject to a humid environment, choose a plated screw. Yellow-zinc plating and black coating are primarily decorative but do provide some protection against staining in acidic woods like White Oak. Of course, for exterior applications, our NoCoRode Plus mechanically galvanized screws provide economical corrosion resistance with a salt spray rating of more than 1,000 hours. Due to usage variables, we cannot guarantee these screws against corrosion. Imported.

PAN, TRUSS & DRYWALL SCREWS

A

18-8 Stainless Steel Pan Head Screws A

Stainless steel Square Drive pan-head screws have a flat surface under the head to ensure that they won't pull through softer materials. They are ideal for attaching metal hardware that does not have a countersunk hole. Use a slightly oversized pilot hole to avoid breakage in hardwoods, such as White Oak, Teak and Maple. **Note:** these have a sheet-metal-type thread. Imported. While supplies last.

B

O'Keeffe's® Working Hands Cream B

Dry wood is good, dry hands are not

Handling wood can play havoc on the hands. Not only do you take the risk of splinters, you also have the moisture sucked out of your skin, leaving them cracked and split. Get back to softness with O'Keeffe's Working Hands, a nongreasy, odorless glycerin-based hand cream. The cream penetrates through the skin to soften and heal without forming a greasy layer on top. Odorless. 3.4-oz. tub.

PAN, TRUSS & DRYWALL SCREWS

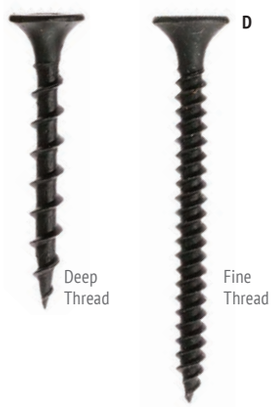

Drywall Screws D

Really!

These genuine drywall screws are designed to attach sheetrock (drywall or gypsum board) to wood or metal studs and come complete with a Phillips recess and bugle head. Incredible, for installing sheetrock (with an automatic screw gun), the Phillips recess works better than a Square recess – mainly because it cams out so quickly! Square Drive screws hold onto the driver bit so well that it is hard to set the screw at a depth that doesn't tear the paper, so a disadvantage becomes an advantage! Use deep-thread drywall screws for wood studs and fine-thread drywall screws for 20 – 25-ga–steel studs.

Plated Pan/Truss Head Steel Screws E

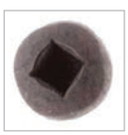

Sheet metal threads work great in wood, too!

Pan-head and truss-head Square Drive screws are flat under the head to provide maximum bearing area. Truss-head screws have a slightly lower head profile than pan-head screws, and the #6 truss heads use the deep particleboard thread rather than a sheet-metal thread. Black oxide plated screws are a favorite of stereo loudspeaker builders, who use them for attaching "drivers" to the mounting boards. Imported.

Tech Tip

Wood Screws are designed for use in furniture manufacturing operations and other demanding industries using hardwoods and other "tough." materials. "Drywall" screws are designed to penetrate a layer of powdery Drywall and a soft, wooden, or thin metal stud. They have a thinner shank (a #6 shank with a #8 head) than Traditional or Production Screws, which makes them more prone to snapping off over torqued when driving them into hardwoods. The threads are a different design than other woodworking screws. Since the entire shank is threaded, this will not allow the pieces being joined to pull together; instead, they may be pushed apart. Drywall screws were originally made for driving into Metal Studs in Commercial Buildings, and the point is shaped to pierce that metal as it's being driven. For this reason, they are hardened, making them more brittle and snap easier. Last, the "Bugle Head" is designed to dimple the layer of paper on the Drywall, spreading the load across the surface for more holding power.

GRK FASTENERS™

R4™ Multipurpose Screws A

All-purpose interior and exterior screw

GRK's R4™ screws have some of the most advanced technology around for faster screw driving with a whole lot less effort and no pilot holes required. Pilot holes are only needed if the building-material manufacturer requires it. Always check with the manufacturer's literature for installation recommendations. The patented nib design under the head acts like a saw blade with six self-contained cutting pockets. So, you can countersink these screws into even the hardest of exotic woods. The threads are extremely aggressive, so they can even be used on fibrous material like OSB. The screws 2" and longer also have a "CEE" four-threaded portion that enlarges the hole, reducing friction and increasing the "drawing strength" for the nonthreaded portion. The longer screws are much easier to drive. These screws can be used in all woods and plastic applications without shredding or cracking the surface. The 90° angle under the screw head fits perfectly into pre-countersunk holes for hardware brackets, making these great for hinges and locks. They can also be used for decking, stairs and general residential construction. Equipped with star drive recess. Stated lengths are "soft conversions" from metric lengths. Some sizes are available in 305 stainless steel. All of the GRK stainless steel products come with a limited lifetime warranty against staining and rusting. Imported. *WC=W-Cut, ZT=Zip Tip, CEE="CEE" Thread

Cabinet™ Screw B

The GRK Cabinet™ screw is specifically designed for cabinet construction and installation with a #8 head - thin enough to prevent splitting, and lengths from 1-¼" to 3-1/8." They have a built-in washer head to press flush against any cabinet surface for a secure installation. These cabinet screws have self-tapping fine threads with a W-Cut thread for low installation torque and a Zip-Tip point for easy installation. Pilot holes are only needed if the building-material manufacturer requires it. Always check with the manufacturer's literature for installation recommendations. In some cases, short cabinet screws have been used in vinyl-siding installation. For this purpose, all cabinet screws are coated with GRK's exclusive Climatek™ corrosion protection for exterior use. *WC=W-Cut, WC=W-Cut, ZT=Zip-Tip

McFeely's

RSS™ Rugged Structural Screw C

The Rugged Structural Screws (RSS™ for short) are made with specially tempered steel to provide high-tensile, torque and shear strength. Use these screws wherever you might otherwise have chosen lag screws. The extra-sharp threads and point bite into wood, reducing the splitting you sometimes get. They have a built-in washer head to reduce "pull through" or dimpling into the timber when tightened. RSS™ screws that are 3-1/8" and longer have a six-threaded CEE thread that enlarges the screw hole for the nonthreaded portion of the fastener, thus allowing the wood to settle easily and increasing the screw's drawing strength. The CEE thread also reduces the likelihood of splitting the wood and the friction on the screw shank which can result in lowering the driving torque. Like the R4™ screws, pilot holes are not required for these screws, because the #30 star drive will deliver approximately 650 ft.-lb. of torque, eliminating the need to drill a pilot hole. Pilot holes are only needed if the building-material manufacturer requires it. Always check with the manufacturer's literature for installation recommendations. Use these screws for attaching ledger boards, constructing retaining walls and for timber framing. The shorter versions can be used for installing wire-diamond mesh for stucco buildings. Self-tapping, Zip Tip™ cut thread design allows for less torque and no predrilling. Also available in 305 stainless steel, which has a limited lifetime warranty against staining and rusting. The ¼ screw head diameter is .533, the 5/16 screw head diameter is .620, the 3/8 screw head diameter is .689". Imported. *WC=W-Cut, ZT=Zip Tip, CEE="CEE" Thread

GRK Caliburn Screws D

GRK Caliburn Concrete screws are professionally engineered with a patented thread so that they can be removed and re-inserted into the same pilot hole numerous times. These flat head screws have a countersinking head and are Climatek coated for corrosion-resistance. One 3/16" x 5-½" carbide-tipped drill bit is included with each 50 pack of screws. These are ¼" flat head screws and are driven by a T-30 star drive bit. Imported.

GRK FASTENERS™

Trim RT Composite

Trim RT Composite SS

A

Trim RTW Composite

Trim FIN

Trim FIN SS

Trim FNW Composite

Trim-Head Screws A

The GRK trim-head screws have the smallest head on the market and are offered in lengths from 1-5/16" to 5". There are several types of trim-head screws available from GRK: Trim RT Composite™, Trim RT Composite™ Stainless Steel, FIN/Trim™, and the FIN/Trim™ Stainless Steel. The stainless steel screws are 305 grade. Pheinox Stainless Steel is GRK's one-of-a-kind stainless. It is hardened and rust-free and maintains the quality you have come to expect from GRK products. All GRK stainless steel products come with a limited lifetime warranty against staining and rusting.

All can be used for interior and exterior applications; however exterior applications are best served with the stainless steel options. Pilot holes are only needed if the building-material manufacturer requires it. These trim-head screws are best suited for window and door jambs and composite decking. FIN/Trim is an excellent choice for most fine-carpentry applications. GRK modified its innovative FIN/Trim Head Screw to include reverse threading under the head of the fastener and called it the "RT Composite Trim™ Head Screw" that is ideal for composite-decking construction. After extensive testing, GRK has found that the reverse thread on the RT Composite Trim Head Screw helps the screw disappear beneath the surface of the composite material, reducing or eliminating the dimple that sometimes appears when using the FIN/Trim Screw. GRK's RT Composite Trim Head Screws are recommended for most composite-decking projects and climates. The reverse-thread feature is available in sizes from 2" to 3-1/8". Additionally the trim screws are available with a white Climatek™ coating as Trim RT WHT, Trim RT WHT Stainless Steel and Trim FIN WHT. The only difference is the color.

Always check with the manufacturer's literature for installation recommendations. The self-tapping W-Cut thread design prevents most material splitting and the Zip-Tip™ point assists in easy driving. **For best results, trim screws should be driven at half speed. To prolong the life of the #10 bit, do not use an impact driver on the #8 Trim Head screw. All screws are imported.**

GRK Trim-Head Climatek™ Coated Fasteners B

The GRK Trim head screws have a small head for fine trim applications including decking and trim casings and moldings.

Features:

- Steel Core for strength
- White Climatek™ coating for corrosion resistance. (Stainless Steel is recommended for wet or oceanside environments)
- Reverse threading near the fastener head helps prevent bulging on the board surface as the screw head is set.
- Self-tapping W-Cut thread design prevents most material splitting
- Zip-Tip™ point assists in easy driving.
- Installation Notes:
- Trim screws should be driven at half speed.
- Care should be taken not to overdrive fasteners. Backing out over-driven fasteners will result in bulging in the board's surface.
- McFeely's recommends using either a driver drill with adjustable torque settings or a driver bit with depth-stop
- To avoid over-driving fasteners and to prolong drive bit life, McFeely's does not recommend use of an impact driver.
- Pilot holes are only needed if the building material manufacturer requires it. Always check with the manufacturer's literature for installation recommendations.

COMPOSITE DECK SCREWS

A

The Go-To screw for virtually all Composite Decking and Trim Boards A

The Deck-Drive DCU Composite Screws are engineered to provide a cleanly seated screw head which blends in beautifully with various composite deck boards. The features engineered into the screw provides excellent drive performance with a cleanly set screw head.

Features:

- 316 Stainless Steel with Color Coated Head
- Tri-lobe thread design cuts through composite material with minumal damage
- Six-lobe Star Drive helps prevent Cam-out and head stripping
- Cap Head prevents mushrooming
- Reverse Upper Threads push material back into screw hole.
- Match screw colors to your premium composite, PVC or encapsulated decking material with our guide found in McFeely's University by folloing the QR Code below. You will have a choice of 305 and 316 Stainless Steel or coated screws designed for outdoor use.

McFeely's

McFeely's® Self-Drilling Bugle-Head Wood Screws, 305 Stainless Steel, Square Drive B

B

You'll be amazed at the difference an auger point makes on a Stainless Steel screw! Great for use with pressure treated wood, or premium materials like Redwood and Western Red Cedar because they are truly self-drilling.

Features:

- 305 stainless steel
- #2 Robertson Square Drive Recess
- Type-17 Self-Drilling Auger Point
- Head diameter is 0.344"

Hint: To avoid any potential for splits, be sure to test or pre-drill when you install at the end of a board.Imported.

McFeely's® Flat Head Wood Screws, C

Beat the rust without going bust!

C

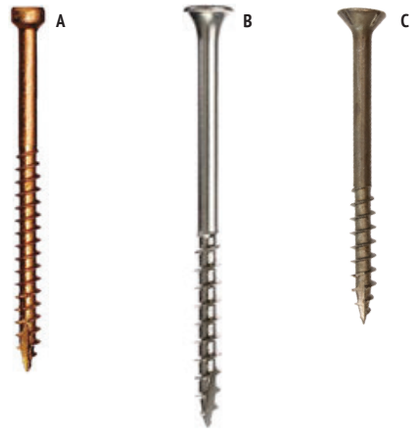

These hardened steel screws are coated with our NoCoRode "Plus" finish for superior corrosion resistance compared to normal zinc-plated screws making them an exceptional value for most non-marine exterior applications. Imported.

Features:

- Hardened steel core for strength
- NoCoRode coated for corrosion resistance
- Genuine Robertson Square Drive
- Use NoCoRode Undersized driver bits for best results. They are specially designed with undersized tips that fit the recess of NoCoRode PLUS plated screws perfectly.

NATURAL WOOD SCREWS

PROMAX DECK SCREWS

Which Screw Should I Use?

Selecting the best fastener for any decking job requires answering three easy questions: What decking material will be used? Will the deck be exposed to a corrosive environment? Finally, how thick is the decking material? The decking material and the environment dictate the choice of fastener material. Galvanized screws work well with pressure-treated decking, while Redwood or Western Red Cedar decks are usually built with stainless steel screws to prevent staining around the screw heads. The new artificial decking materials, such as Trex® polymer wood, can be fastened with either galvanized steel, ceramic-coated, or stainless-steel screws. Tropical wood decking, such as Ipe, Pau Lope™, or Teak, is generally secured with stainless-steel screws for virtually a lifetime of maintenance-free service. The corrosive atmosphere of a seaside location dictates a minimum of type 305 stainless-steel fasteners, regardless of the decking material used. Docks, because of their more severe service requirements, should be built with type 316 stainless-steel screws. Screw material also dictates the screw gauge required. Our hardened-steel NoCoRode Plus screws are strong enough that #8s are adequate for most applications, while the softer stainless steel normally requires a #10 screw. If you are in an area that experiences extreme weather conditions or the structure may experience unusual loads, consult a Licensed Professional Engineer for design assistance. The fastener length is easiest to determine since the thickness of the decking itself governs it. For standard 2x4s or 2x6s, a 3" L fastener is required, while 5/4x4s or 5/4x6s only need a 2-½" L fastener. With rare exceptions, it's that simple. The following table lists fasteners commonly used for decking applications:

Pressure-Treated (ACQ)
1023-FP5, 1027-FP5 ProMax® Stainless Steel Auger Point (Self-Drill)
1024-FA5, 1030-FA5 Type 305 Stainless Auger Point (Self-Drill)
0823-FPT, 0827-FPT ProMax® NoCoRode Plus Dekkers™ (Self-Drill)
0824-FCT, 0830-FCT NoCoRode Plus Standard Point

Western Red Cedar, Redwood, Teak, Ipe, Pau Lope™
1023-FP5, 1027-FP5 ProMax® Stainless Steel Auger Point (Self-Drill)
1024-FA5, 1030-FA5 Type 305 Stainless Auger Point (Self-Drill)
1024-SFB, 0930-SFB Type 305 Stainless Headcote Auger Point Painted Head

Seaside Applications
1024-SD6, 1030-SD6 Type 316 Stainless for Seaside Docks
1024-FA5, 1030-FA5 Type 305 Stainless for Inland Decks

ProMax® is a registered trademark of McFeely's® Square Drive Screws

ProMax® Optimized Thread Length™: What It Means and Why You'll Like It!

Deck screws are a good example of Optimized Thread Length™. The screws commonly used to install 2x4s or 2x6s for decking are 3" L and have 1" of unthreaded shank. Since 2x4 and 2x6 deck material is 1-½" thick, the threads bridge the joint, as shown, resulting in either an uneven or unsightly surface or screws that are over-driven trying to "pull the board down." ProMax screws are different. Thread length is optimized to eliminate cross-threading. Plus, the 1/8" L system allows the use of the most extended possible screw.

GRK Climatek™ Coated Trim Head Screws A

Best for Natural Wood

The GRK Trim head screws have a small head for fine trim applications including trim casings and moldings. These screws are designed to work best with natural wood. Not recommended for composite materials.

Features:

- Steel core for strength
- Climatek coating for corrosion resistance. (Stainless Steel is recommended for wet or oceanside environments)
- Thread design with natural woods in mind.
- Self-tapping W-Cut thread design prevents most material from splitting
- Zip-Tip™ point assists in easy driving.

Imported.

ProMax™ Optimized Thread Length™ B

Bugle Head

As most woodworkers know, as of January 1, 2004, the pressure-treated lumber industry has voluntarily switched from CCA chemical processes to alternative treating methods such as ACQ. While significant testing has been performed on galvanized screws to ensure their compatibility with the new treatment processes, to date, stainless steel is the only corrosion-resistant material to have gained widespread acceptance for use with these new materials. ProMax Stainless Steel screws are the ideal choice for use with these new materials. **Note:** Stainless steel has inherently lower strength compared to hardened steel. ProMax™ Stainless Steel screws are all #10's, which provides roughly the same torque strength as the #8 ProMax NoCoRode screws. Made in Taiwan / China. Unthreaded Length 1-5/16".

Part #	Size	Screw Length	Thread Type	Recess Style	Qty/Pk	-K Qty/Pk	-M 1,000/Pk	-C 100/Pk

ProMax™ Optimized Thread Length™ C

Flat Head

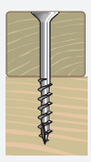

Whether you are building some great looking 2 x 4 furniture or doing a bit of light framing, ProMax™ Optimized Thread Length™ screws will make construction easier. The extra long unthreaded shank prevents cross-threading or jacking without the need for a clearance hole, and the 1/8 in. length system allows the use of the longest screw possible without fear of backside protrusion. These Square Drive screws have self-drilling auger points, self-countersinking nibs, and a light "lube" finish suitable for interior, non-visible applications. Unthreaded Length 9/16 in.

McFeely's Professional Grade. Professional Results.

McFeely's ProMax® Wood Deck Screws, NoCoRode PLUS, Flat Head, Square Drive D

ProMax Optimized Thread Design to Reduce Board Jacking

D

Features:

- ProMax Screws have a longer, un-threaded shank. Why? This feature prevents board jacking, that annoying problem when a board rides up the threads of the screw and causes the board to raise. For example: A 2-3/8 in. screw used to install 5/4 in. decking needs slightly more than 1 in. of smooth shank, while a 2-7/8 in. screw used to install 1-½ in. thick 2x stock needs more.
- Self-drilling auger points
- Self -countersinking nibs,
- NoCoRode "Plus" corrosion-resistant finish.

Use NoCoRode Undersized driver bits for best results. They are specially designed with undersized tips that fit the recess of NoCoRode PLUS plated screws perfectly. Made in Taiwan / China

McFeely's Deck Drive Screw - 305 Stainless Steel, Flat Head E

E

These screws are designed for exterior applications and are a good choice for natural wood decks.

Features:

- 305 Stainless Steel Corrosion-Resistance
- 4-corner thread for reduced driving resistance
- Self-countersinking nibs under the head
- Best for natural wood applications

Imported. **Not for salt air exposure. Use 316 stainless steel if near the ocean or wet environments.**

Deck Screws, 316 Stainless Steel, Flat Head F

Superior Corrosion Resistance for Extreme Environments

F

If you are building in a seaside, poolside, or dockside environment, you need to use 316-grade stainless steel fasteners to achieve adequate corrosion resistance. These screws not only meet that requirement, but they feature the easy-to-use Star or 6 Lobe recess design to virtually eliminate cam-out. Imported.

8 x 2 in. Kreg® Deck Screws, Stainless Steel

Perfect for ACQ-treated lumber!

These 2 in. (51 mm) long Stainless Steel deck screws were specifically designed for use with the Kreg Deck Jig™ Hidden Deck Fastener System. The 2" long screws work well both in ¾" and 1-¼" lumber. (nominal thickness dimensions)

Features:

- Flat-bottom head seats in the bottom of the counter-bore and won't split the workpiece
- Square-drive Driver Bit for the solid driver engagemen
- Stainless Steel provides needed corrosion-resistance in harsh environments such as those of a poolside, an oceanside or of salt spray
- Self-drilling auger point for faster, easier driving
- The flat bottomed screw head is designed to fit into a counter bore hole made by the Kreg stepped-driver bit that is part of the Kreg Deck Jig Hidden Deck System.

Stainless Steel provides needed corrosion resistance in harsh environments such as a poolside, an ocean-side or of salt spray. By its nature, stainless steel is softer than coated steel screws. Do not over torque when driving.

Part #	Size	Screw Length`	Thread Type	Recess Style	Qty/Pk	Price

Self-Drilling Wood Screws, 316 Stainless Steel, Trim Head D

When it comes to resisting corrosion in the harsh conditions encountered around salt water, passivated 316 Stainless Steel is the undisputed champ. Its high Nickel content, together with a small percentage of Molybdenum, make it exceptionally resistant to corrosion. This is the very best choice for all construction exposed to salt spray. Remember that even 316 stainless steel is more prone to breakage than the hardened steel screw you are used to using. **Note** the non-standard head diameters (0.230). Drive carefully!

Features:

- The trim-style head is less noticeable on the decking surface
- Type-17 Self-Drilling Point
- Coarse threads on approximately 2/3 of the shank draw the decking and other material tightly to the framing.
- Type 316 stainless steel for seaside, poolside, or other harsh applications

Predrilling is recommended near board ends to prevent splitting. Made in Taiwan.

SPAX® Double ThreadLok™ Trim-Head Deck Screws, 304 Stainless Steel E

Engineered for wood deck board and railing baluster applications

Unique Double ThreadLok design pulls and holds boards tight, preventing screws from backing out and boards from squeaking as lumber dries out.

Features:

- Double ThreadLok tightly locks boards together.
- Combination Square / Phillips Drive
- 304 Stainless Steel for excellent corrosion resistance
- Patented Multi-Head nibs helps countersink head
- Patented Serrated Threads for faster easier driving
- Patented 4CUT™ Point - No Pre-drilling, No Splitting
- German Designed - Made in USA.

Deck-Drive DWP Wood SS Screws G

The Deck-Drive DWP Wood SS screw is a powerful fastening solution for deck, dock and general exterior applications where extra corrosion protection is needed. With its specially designed sharp point and unique box-threads, the DWP is ideally suited for the majority of wood used in today's deck boards. Choose Type 316 stainless steel for waterside environments. Check on line to visualize your color choice. Colors vary by different manufacturers.

Simpson Strong-Tie 316 Stainless Exterior Trim-Head Wood Screw H

For Natural Wood and Demanding Seaside, Salt Spray, or Poolside

These Exterior Wood Screws are designed for natural wood with 316 stainless steel to stand up to demanding environments. The Type-17 point eliminates the need for pilot holes with the exception of screws drilled near the end of boards. There may be long lead time for delivery and color varies by manufacturer. GR=gray, TN=tan, BR=brown, WH=white, RD=red.

Features:

- Trim style head is less noticeable on the decking surface
- Type-17 point cuts wood fibers for fast starts and reduced lateral pressure which helps prevent splitting.
- Coarse threads approximately 2/3 of the shank to draw the deck boards tightly.
- Six lobe star drive helps prevent cam out and head stripping.
- 316 Stainless Steel for superior corrosion resistance at a seaside, a poolside, or a salt-spray environment.
- Painted heads help screw head blend in with deck board.

Trim style head is less noticeable on the decking surface. Use 316 Stainless Steel for superior corrosion-resistance at the seaside, the poolside or the salt-spray environments. Painted head help screw head blends in with the deck board. Check on line for color selection as choices vary by manufacturer. These may have a long lead time for delivery.

STRUCTURAL SCREWS

FastenMaster® ThruLOK™ Construction Fastener A

The ThruLOK™ system can be used for applications replacing traditional carriage and through bolts for multi-ply beams, deck posts, carrying beams and more. It combines the strength of a through-bolted connection with the speed of a LOK™ fastener with no predrilling required.
Note: Point of fastener must engage in ThruLOK™ nut to the "MIN" line or beyond.
Features:

- Installs with an 18 volt cordless drilL
- No drill bits or wrenches required
- Galvanized coating meets IRC ACQ corrosion requirement
- Lifetime performance guarantee

McFeely's Galvanized Hex Cap Bolts B

Bolts have a big advantage over screws in many applications: joints don't depend upon threads cut into the wood for their strength. Galvanized bolts offer some corrosion resistance and can be used for indoor applications or arid environments. For water and especially salt-water applications, stainless steel should be used. Made in Taiwan.

FastenMaster® LedgerLok™ Ledger Fasteners C

LedgerLok™; fasteners are designed to attach a deck ledger board to a house without predrilling. These heat-treated screws provide higher shear values than traditional ½" lags. A proprietary multi-coat finish is guaranteed not to rust for the life of your project, even in ACQ treated lumber (saltwater applications excepted). A 5/8" dia. washer head prevents the fastener from countersinking into the wood. Use a 5/16" hex nut driver. Consult your local building codes for appropriate use. LedgerLok meets ICC AC233. LedgerLOK should be installed using an impact driver or high torque, ½" variable speed drill (at least 18V if cordless). Choose the proper length LedgerLOK so that threads fully engage the rim material. Bring washer flush to the ledger- do not countersink. Not for use in masonry or concrete. Made in USA.

Corrosion Resistance for the Big Jobs! D

Lag Screws are designed for the really big jobs-building docks, decks and wharfs. Installed properly, they have outstanding holding power, and do not need to be re-tightened frequently, as is sometimes the case with bolted connections. We offer these tough lags in either 18-8 stainless steel or hot-dip galvanized. All ¼ lag screws have a 7/16" hex head. Imported.

Lag Screws E

Lag Bolts are really just over-sized screws - way over-sized! That makes them perfect for tasks that are even too big for a #12 screw, especially exterior jobs. Unfortunately, lag bolts up to the task that could handle challenging environments have been almost impossible to find. Now you don't need to redesign your project to get around the lag bolt problem. These tough lag bolts are plenty strong (up to 30% more torque capacity than standard steel lag bolts), with all the corrosion resistance of 18-8 stainless steel. Imported.

STRUCTURAL SCREWS

A

SPAX® PowerLag® Screws, Washer Head, HCR® Coated A

Goodbye Conventional Lags!

SPAX PowerLags offer the largest selection of code-recognized structural wood-to-wood fasteners in the industry. Featuring SPAX patented thread technology, they require no pre-drilling, and drive faster and easier than conventional lags and other structural screws. **Features:** Low-profile, large diameter head design allows for outstanding clamping force and improved aesthetics. Deep T-Star drive offers excellent bit engagement without requiring a "special" driver bit. HCR Coating is approved for use in treated lumber. Code listings ICC-ES No. ESR-1782. Technical evaluation report 1711-01 deck ledger application. Heat treated to Grade 5 durability. Patented thread serrations require up to 40% less driving torque to increase installation speed while helping prevent cracking in logs. Built-in washer head designs eliminate the need and extra cost of a separate washer. German Designed - Made in USA.

B

SPAX® PowerLag® Screws, HCR® Coated, Washer Head, Raised Hex Drive B

Goodbye Conventional Lags!

SPAX PowerLags offer the largest selection of code-recognized structural wood-to-wood fasteners in the industry. Featuring SPAX patented thread technology, they require no pre-drilling, and drive faster and easier than conventional lags and other structural screws. **Features:** Raised Hex Drive provides maximum driver engagement, especially when using larger diameter/longer length parts in harder wood species. SPAX HCR Coating is approved for use in treated lumber. Code listings ICC-ES No. ESR-1782. Technical evaluation report 1711-01 deck ledger application. Heat treated to Grade 5 durability. Patented thread serrations require up to 40% less driving torque to increase installation speed while helping prevent cracking in logs. Built-on washer head designs eliminate the need and extra cost of a separate washer. German Designed - Made in USA.

Simpson Strong-Tie C

Designed for lag-screw replacement - Structural Wood-to-Wood Connections including Ledgers

Features: These stainless-steel screws require no pre-drilling in most applications. 316 Stainless Steel for maximum corrosion resistance including dockside applications. Can be used for ledger applications. Meets 2012 and 2015 IRC® and IBC® code requirements for several common wood framing applications. "Box" thread design with raised ridge technology significantly reduces driving torque and installation time. 0.66 in. diameter washer head, ½ in. raised hex head, 0.276 in. thread size, 2.95 in. thread length.

C

GRK® RSS Outdoor Structure Screws D

The Rugged Structural Screws (RSS™ for short) are made with specially tempered steel to provide high tensile, torque and shear strength. Use these screws wherever you might otherwise have chosen Lag Screws. The extra sharp threads and point bite into wood reducing the splitting you sometimes get. They have a built in washer head to reduce "pull through" or dimpling into the timber when tightened. RSS™ screws which are 3-1/8" and longer have a six threaded CEE thread that enlarges the screw hole for the non-threaded portion of the fastener, allowing the wood to settle easily and increasing the screw's drawing strength. The CEE thread also reduces the likelihood of splitting the wood and the friction on the screw shank which can result in lowering the driving torque. Like the R4™ screws, pilot holes are not required for these screws because the #30 Star Drive will deliver approximately 650 ft-lb. of energy, eliminating the need to drill a pilot hole. Pilot holes are only needed if the building material manufacturer requires it. Always check with the manufacturer's literature for installation recommendations. Use these screws for attaching ledger boards, constructing retaining walls and for timber framing. The shorter versions can be used for installing wire diamond mesh for stucco buildings - self-tapping, W-Cut thread design and Zip-Tip™ point. These 305 Stainless Steel screws have a limited lifetime warranty against staining and rusting. Imported.

D

STRUCTURAL SCREWS

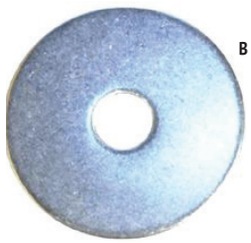

A

Big Timber Construction Lag Screws A

Big Timber Structural Corrosion Resistant Construction Lag Screws. Mountain Tested since 1945.

- Heat-treated hardened steel for high tensile strength and high shear strength
- Triple Layer ACQ Compatible Bronze Coating for Exterior or Interior use
- Deep Six Lobe Star Drive Recess reduces cam out end load. Handles twice the torque as Phillips or Square Drive while extending the life of the bit
- Built-in washer head for increased pull-through strength
- Under head cutting nibs to aid in self-countersinking
- Aggressive knurl enlarges hole to reduce splitting and drag to help draw lumber together
- V Cut notches on threads to cut fibers for easier insertion at lower torque
- Type 17 tip for faster precise starts which eliminate "walking" and provides easier insertion without pre-drilling
- Aggressive Thread for great withdrawal strength
- Structural Lag Screw backed by certified independent testing (TER 1907 01) (Acceptable alternative to galvanized lag screws)
- International Building Code and International Residential Code Compliant

B

Extra Thick Washers B

Extra thickness prevents distortion

Ever wonder why bolted connections in pressure treated lumber loosen? The wood fibers are not strong enough to prevent crushing. Standard washers are so thin that they deform as the wood beneath them compresses over time, so the joints eventually loosen. The solution is to distribute the load over a wider area. Use a washer "stiff" enough to avoid deformation (tighten several times as the wood dries). These 1/8" thick, super duty stainless steel washers won't deflect and distort as common washer do. They're available in an oversized diameter to further help distribute clamping loads. **Caution:** Stainless steel and the zinc in galvanized steel are very dissimilar and will react to each other. Do Not Mix bolts and washers of dissimilar metals. See McFeely's University for more information.

McFeely's

McFeely's® Fillister Head Pocket-Hole Screws C

Versatile fasteners for hardwoods or softwoods, cabinetry or construction!

Pocket hole joinery is a popular method for building everything from fine furniture and kitchen cabinets to window frames and deck railings, but you've got to use the correct screws for the best results!

All of our pocket-hole screws share several essential features. **First**, a self-tapping "auger" point prevents the screw from forcing the rail and stile apart as it advances from part to part (standard screw points can raise a chip between the parts, resulting in a gaping, unprofessional joint). **Second**, the unthreaded portion of the screw shank is adequately designed to help prevent cross-threading. **Third**, the screw heads are large enough to avoid wood fiber crushing, and they're flat underneath to prevent splitting. **Finally**, our screws are extremely strong to avoid breakage during assembly.

For traditional cabinetry using ¾" to 1-¼" material, choose our standard #6 fine-thread screws for hardwoods and #6 coarse-thread screws for softwoods. Our beefier #8 Super-Eight™ coarse-thread screws can be used in both materials as well as MDF and particle board. When building with 2x construction lumber or pressure-treated materials, use our exclusive PocketMax® screws, which are extra long, have an oversized head to minimize crushing in softwoods, and an extended unthreaded shank necessary to avoid cross-threading Use a clutch-equipped drill on low speed to install these fasteners! Imported.

PocketMax® 305 Stainless Steel Flat-Top Pan-Head Pocket-Hole Screws D

The ultimate pocket-hole screw for exterior use!

Now, you can build fences, gates, lawn furniture, deck railings, and even decks using pocket hole technology without worrying whether the fasteners are up to the task. These stainless-steel pocket-hole screws are specifically designed for exterior applications. They have beefy #10 shanks for strength, deep threads for superior holding power, and auger points for easy installation. That beefy shank diameter provides enough strength to join two pieces of Ipe decking quickly but still works with the standard 9/64"-dia–pilot hole provided by a Kreg® pocket-hole drill bit. Since stainless steel is softer than unhardened steel, the extra shank diameter compared to the average #6 or #7 screw assures that the screw is strong enough to work in tropical hardwoods or pressure-treated lumber. Use a clutch-equipped drill to install these fasteners! Imported.

Part #	Size	Unthreaded Shank Length	Thread Length	Bit Size	Thread Type	Qty/Pk	Price

Kreg Blue-Kote™ Pocket-Hole Screws E

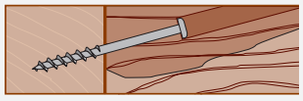

Blue-Kote™ pocket hole screws feature a three-layer, high-grade, anti-corrosion coating. The first layer is a zinc layer to protect the hardened steel inner screw from corrosive environments. The second layer inactivates the zinc and creates adhesion between the base coat and the Blue-Kote layer. The Blue-Kote layer is a baked ceramic, which is chemically inert, so rust can't form on the surface. Enough of all that chemical talk; the gist is that Blue-Kote screws are 400% more weather-resistant than the "ol" Kreg® Sun-Seal screws, and they have a Square Drive recess for positive bit engagement. Imported.

Pocket-Hole Joinery: What You Need to Know!

Pocket-hole joinery is popular because it is a fast, robust, easily adaptable, precise assembly method. Joints are as strong as mortise-and-tenon joints and can be made in a fraction of the time. Award-winning Kreg Jigs® uses a 3/8 in. counterbore bit with an 11/64 in. pilot to drill a 15° angle into the first piece. With the joint tightly clamped, a special self-drilling pocket-hole screw is placed in the pocket and driven tight to complete the joint. Pocket-hole screws feature an auger point to prevent raising a chip between the two parts during assembly, ensuring a tight joint. A large pan-head with a #2 Square recess and extended unthreaded shank enable this screw to draw the two members of the joint tight,

Tech Tip

Plugging a Pocket Hole

Plugging a Pocket Hole Pocket-hole plugs are cut at an angle so that they sit perfectly flush on the top of the screw head when fully inserted. A small amount of plug will remain above flush and must be trimmed off with a handsaw or sanded.

Steps to Plug a Pocket Hole:

1. Drill a hole to adequate depth, and drive screw to secure joint. Tip: Set the depth collar on your drill bit approximately 1/8" further from the step of the drill to ensure that the screw the head will be deep enough for the plug to cover the pocket hole fully.
2. Glue and place. Place a fair amount of glue into the bottom of the pocket and around the perimeter of the plug. Press into place, and wipe away excess glue.
3. Trim or sand off excess plug. Softwoods can often be made flush with an orbital sander, while hardwoods will most likely require trimming with a flush-cut handsaw before final sanding.

Pricing is subject to change at any time due to market fluctuations.

POCKET-HOLE SCREWS

Blue-Kote™ Screw Kit E

Blue-Kote is the next generation of corrosion-resistance screws. The chemical process bonds three layers to provide corrosion resistance that has a salt spray rating of 1,000 hours. All screws in this kit are #8 head with #2 Square Drive. This kit, in a hard-plastic case, includes the four most popular length pocket-hole screws. Imported.

Kreg XL Pocket-Hole Screws I

XL Pocket-Hole Screws are optimized for use with the Kreg Pocket-Hole Jig® XL, the Kreg Jig HD, and 1 ½ in. and larger stock. These large 2 ½ in.-long #14 hardened-steel screws provide incredible shear resistance and have a Protec-Kote™ finish with three anti-corrosion layers for long-term moisture resistance. These screws use a #3 square driver.

CABINET INSTALLATION/HARDWARE SCREWS

McFeely's® Recex Combo Drive Painted-Head Cabinet Hangers

Put the finishing touch on your cabinet installation

Details make the difference. Hang cabinets with these painted-head screws, and you will really make an impression – because the screw head won't! The sanded or white painted finish draws less attention than a shiny silver screw head and lets the customer know you have looked after even the smallest detail. Specially designed for hanging cabinets, only 1-½" of the shank is threaded to prevent the cross threading that reduces holding power– Extra-large 7/16"-dia. The Truss's head spreads the clamping load out so the screw does not bury itself in the hanging strip. Type 17 points helps prevent wood splitting when driving the screw. Head height is 1/16". Imported.

Part #	Size	Painted Header Color	Bit SIze	Thread Type	-K Qty/Pk	-C 100/Pk

FastCap® PowerHead™ Screws D

9/16"-dia. head fits under FastCaps - the perfect cabinet-mounting screw

Anyone that has worked with melamine, particleboard or MDF knows how easy it is to overdrive a screw and sink it well below the surface. FastCap's new PowerHead screws have big 9/16"-dia. heads designed to prevent that very thing. The size increases the holding power by 4x that of a normal screw head, while the flat surface helps to hide the screw with a screw cap. Nibs beneath the head allow the screws to seat perfectly flush (use an impact driver drill for flush installation) or to be left proud of the surface. The self-drilling Type 17 auger point allows them to drive easily in hardwoods and softwoods as well, without the need for a pilot hole. When used with FastCap's FlushMount Drill Bit (part # FCS-6050), the screw head can be hidden perfectly behind a peel-and-stick FastCap. Imported.

McFeely's® Super Round Washer Head Oversize Drawer Front Screws E

Adjust drawer fronts the easy way!

We call these super round washer head screws, "The only thing you will ever need," once you use them for attaching a few drawer fronts. You'll soon agree with us. The oversize head has about a ½" dia. – 22% larger than standard heads – so it spreads out the load and allows for adjusting drawer-front alignment for perfect gaps at every opening. Type 17 point helps prevent wood splitting when driving the screw. Imported.

Cabinet Installation Made Simple

With a bit of preparation and a general understanding of the objective, installing cabinets is not a big deal! The objective is to secure the cabinets to the building and provide level work surfaces. Ideally, the installation should ensure that work surfaces stay level for many years. In most applications, cabinets have a 3/4 in. hanging rail, and the wall will be 1/2 in. drywall over studs. Install 2x6 blocking between studs during wall construction to make attachment of the cabinets significantly easier. Install base cabinets on blocking made of plywood strips rather than the standard 2x4 base to keep work surfaces level as the structure ages. Plywood is dimensionally stable, whereas framing lumber can shrink considerably as it dries out – as much as 3/16 in. in width! Use 10 x 3 screws when attaching cabinets to wall studs, or use 2-1/2 in. L screws when attaching to 2x6 blocking. We carry several suitable fasteners for this purpose (but you already knew that, didn't you?). For a finished appearance without resorting to screw caps or plugs, the 10 x 3 truss head cabinet hanging screw is prefinished with a clear zinc-plated, white, or sand-colored head. The large bearing surface of a 10 x 3 rounded washer head screw helps prevent crushing of the hanging strip, and the screws are available in a range of finishes. To match the cabinet interior more closely, our #10 flat heads can be driven flush and covered with screw caps or driven through a trim washer (which also increases the bearing area). Clear, zinc-plated, yellow, zinc-plated, or stainless-steel screws are recommended for kitchens and baths to minimize discoloration. The method used to fasten cabinet boxes together depends mainly upon the type of cabinets used. Face frames are generally joined by attaching the stiles using #8 flat-head steel screws. The screw should penetrate a minimum of 1 in. into the second stile. The hole may be plugged for a finished appearance. Once the faces are flush and tight, predrill the pilot hole (7/64 in. to 1/8 in.), flip the drill guide out of the way, and drive the screw tight while the cabinets remain clamped in position. European cabinet boxes are joined with panel connecting screws, which fit through predrilled 32mm system shelf pin holes on the inside of adjoining cabinets. Once the hole for attachment is selected, drill through with an 8mm bit, align the boxes, and slip the connectors in place.

Pricing is subject to change at any time due to market fluctuations.

Professional Grade. Professional Results.

CABINET INSTALLATION/HARDWARE SCREWS

McFeely's® "Euro" Mounting Screws F

5mm drawer-slide mounting screws

Now you can install Euro-style drawer slides using either Square Drive or standard PoziDrive. These screws are made specifically for use with the European 32mm cabinet components and perfectly fit the standard mounting holes on Grass® drawer slides, as well as most other brands. For best results, use our 5mm self-centering pilot-hole drill (#MS-6006). Packages of 16 provide the correct quantity to mount Euro-style drawer slides. Imported.

McFeely's® Undercut-Head Screws G

Designed for Euro drawer slides

Flat head screw heads don't seat properly in the Euro-style drawer-slide mounting holes. This screw's undercut head matches the slide-material thickness of Grass Euro slides as well as most other brands, so the screw seats properly. Use our self-centering bit (#MS- 5107) to predrill for at least two mounting screws on each slide before drilling all of the mounting holes. Zinc plated screws have a #2 Phillips drive. Imported.

G

Part #	Size	Qty/Pk	Price
0604-FPU-MN	#6 x ½"	1000	$20.23
0604-FPU-C		100	$4.78
0604-FPU-D		16	$4.50

6 x 5/8 Self-Drilling Screws H

Mount slides without predrilling!

These screws have sharp, self-drilling points to minimize predrilling. For best alignment, however, use a self-centering bit (#MS-5107) for at least two of the mounting holes on the cabinet half of the slide. That will keep everything in place should one of the screws wander. It is nickel plated with a Phillips drive. Imported.

Fastening MDF & Melamine Particleboard

Most man-made materials used in cabinetmaking are basically composed of wood dust in a resin matrix – there is no traditional grain structure to resist withdrawal forces. Fortunately, there are solutions:

Confirmat screws were developed specifically for edge-to-face joining of particle-based products like melamine board. They have deep threads on an oversize shank, a clearance-hole diameter shoulder beneath the head, and a head that is just slightly larger than the shoulder. Installation requires a special three-step drill bit, but the result is a tight, strong joint.

RTA screws make stronger joints than cabinet-connecting screws, but the construction is "fussier." The screws have large wafer heads, blunt tips and machine screw threads that mate with small cylindrical cross-drilled barrel nuts. Installation requires precise drilling of two blind holes, but the system can be used with many materials and joint conditions.

If assembly speed and cost are important, use an extra-long cabinet screw, such as our FSL or ProMax® series screws. Predrill when working close to the edge (even when using auger point screws), since man-made materials are prone to crumbling. Note that it is best to consider this a permanent clamp while an adhesive is curing, rather than a primary fastener.

Assemble melamine cabinets easily

Do you assemble melamine cabinets? Do you work with particleboard or Medium-Density Fiberboard (MDF)? These unique clear zinc coated fasteners have been specially designed to make your life easier! The large shoulder beneath the head locks the shank in position to minimize the possibility of board failure. An extra-long stem on the specially designed screw cap fits a hole in the drive recess, preventing most accidental removal. Screws require a pilot hole through both pieces of material. Use the 7 x 50mm (approx. 2") screws with ¾" materials and the 5 x 40mm (approx. 1-½") with ½" materials. Imported.

CABINET ASSEMBLY SCREWS

Cabinet Connecting Screws C

Standard European Cabinet construction uses 2 rows of blind holes located on 32mm centers on each side panel. This 32mm or Euro-Style construction system allows for easy customization of the cabinet. Shelf pins, drawer runners and other accessories are all based on the 32mm measurement. Connecting European Cabinet boxes is easy with these connecting screws. Drill out the appropriate 8mm holes, insert the threaded rod through the holes in both boxes then tighten by attaching the caps to both ends, exactly aligning the cabinets. For different panel thicknesses, choose the proper length screw from the list below.

RTA Connecting Bolts D

Connecting bolts and barrel nuts make strong joints

You've probably built some "ready to assemble" (RTA) furniture that used this fastener. A connecting bolt is popular because it creates strong joints, doesn't depend on the poor fastener holding power of end grain and it is virtually impossible to assemble the joint incorrectly. Its a real advantage in the RTA market. Joint construction is easy. Drill a ¼" clearance hole into the end grain for the connector screw. Then, drill an intersecting 13/32"-dia. hole for the 3/8"-dia. barrel nut. Drop in the barrel nut, align it to the connector-bolt hole, slip in the connector screw, then tighten with a 4mm Allen wrench, and you're done. **Critical details:** The connector bolt head is 15mm (a bit less than 5/8") in diameter and 3/32" thick. The holes in the barrel nuts are offset ¼" from the bottom. Imported.

JCBW Screws E

Joint Connector Bolt Wood screws (JCBW) are ideal when you need a strong right-angle joint with a decorative, low-profile head. They are commonly found on "ready to assemble" (RTA or KD) furniture. Roughly equivalent to a #14 wood screw, these screws have deep threads for exceptional holding power. **Predrilling for these screws is a must:** 3/16" for softwoods, 7/32" for hardwoods. Head is 17mm (approx. 11/16") dia. x 2mm (5/64") high and has a decorative beveled edge. Install using a 4mm hex driver, plated with low-carbon steel. Imported.

Trim Washers A

Decorative or functional

Trim washers have many uses. They can dress-up screw heads when you need to leave them exposed, or to "convert" a flat head screw to a round washer or pan-head type screw when the screw cannot be countersunk. They also help distribute the load over a wider area when fastening soft materials. Use them as eyes, headlights or other decorative effects on toys and craft projects. We stock these in three sizes (#6, #8, #10) and three finishes. Each pack contains 100 trim washers. Imported.

Brass Threaded Inserts B

Deep external "knife" threads

These work well in most hardwoods, plywood (chamfer the entry hole to minimize veneer lift), furniture, storm windows, crating and cabinetry. They may be installed using a flat-bladed screw driver, but either the dedicated installation tool or a homemade tool will generally provide better results.

Threaded Inserts & Tee Nuts

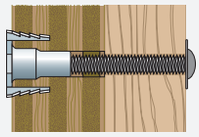

Both threaded inserts and "tee" nuts allow you to put durable threads in materials that are either too thin to effectively thread or are too soft to allow for repeated assembly and disassembly. Popular in the Ready To Assemble (RTA) furniture industry, both types of hardware are easy to install and offer significant design flexibility when using materials such as plywood or MDF.

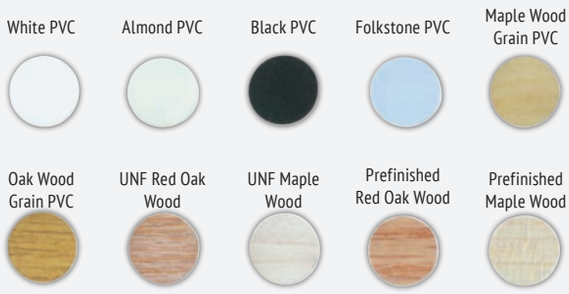

Threaded inserts look like short, thick walled tubes that have screw threads on both the inside and outside. They are installed by drilling a pilot hole and screwing in the insert. Some inserts may be installed using flat bladed screwdrivers, which are prone to slipping. However, most inserts require the use of special piloted drivers, which help prevent slippage. Threaded inserts hold best and are easier to use when installed in the side or face of the grain. They are actually threaded into the material rather than pressed in place like "tee" nuts, the load may be applied from either face.

"Tee" nuts also provide internal threads but have a flange with protruding stakes which lock into the wood, holding it in position and preventing rotation. "Tee" nuts must be installed such that the flange is pulled against the wood when a load is applied. If installed backwards, the "tee" nut will simply unseat when a load is applied. Installation is simple, just drill the appropriate-size pilot hole and pound the nut into position.

Due to variables in the printing process, the colors in the photograph may not match the caps exactly.

Stainless Threaded Inserts C

These stainless steel inserts are best used in hardwoods where the material density supports the shallow external threads. The inserts are slightly tapered on each end ("lead") for installation ease. Install using a driver (listed below). Imported.

FastCap® Peel-and-Stick Screw Caps

Super convenient, and they really stick!

Unlike most self-adhesive products, these peel-and-stick screw caps really stay stuck! A high-performance acrylic adhesive actually increases bond strength as it cures (maximum strength is achieved at seven days, but you can hardly peel them off after 10 minutes!). The adhesive is totally waterproof and withstands temperatures of -30° to 250°F. These screw caps are available in PVC and finished or unfinished natural wood veneers. The caps are 9/16" dia. PVC caps are .025" thick; unfinished wood caps are .019" thick; and prefinished wood caps are .024" thick. Each sheet contains 52 low-profile caps that may be affixed directly to the surface. For a nearly invisible installation, flush mount them using the FastCap FlushMount bit. **Note** the grain and color selection are also critical to achieving a virtually invisible application.

Squeeeeek No More® B

Removes the squeak from the top! Use with carpeted, hardwood, or vinyl flooring.

Squeaky floors can be a pretty effective and "broken curfew detector" in the middle of the night! For most people, though, a squeaky floor is an aggravation they've learned to live with. Squeeeeek No More® uses an innovative screw that locks the squeaky flooring to the joist, then breaks off below the surface. Simply place the alignment fixture over the carpet or exposed wood flooring, and drive one of the special screws through the fixture and into the floor. When it bottoms out, use the guide to snap the screw off below the surface, which locks the floor to the joist. It's very effective and very fast!

Kit Includes:

- Squeeeeek No More Joist-Finding Screw for carpets
- Carpet Drill Guide and stop jig
- Hardwood Floor Drill Guide with 3 stop heights
- 50 Yellow Zinc Plated Screws with break off scoring.

Follow the instructions carefully, especially, with respect to pilot hole sizes in hardwood applications.

Part #	Description	Price
SNM-3230	Carpeted Floor Kit w/ 50 Screws 3 & Driver Bit w/ Stop	$24.95
SNM-3251	50 Scored 3-1/8" Screws	$10.20

ALLIGATOR® Solid Wall Anchors Hold a Ton...and a Half C

Not just another blue anchor!

Unlike old-fashioned blue plug-type anchors, ALLIGATOR anchors mold into the imperfections of the hole for superior holding power. The anchor stays in place when the fastener is removed, and they can be used in both hollow and solid walls. For maximum grip in dense materials (concrete for instance), use the same size screw or lag bolt as the pilot drill. In brick or softer masonry, use a screw in the middle range; for drywall or very soft materials, veer toward the low end of the range. Screws are not included. Made in USA. **Note:** The "F" in the part number indicates the flanged version.

WallClaw Anchors G

The WallClaw Anchor has a finish nail starter and a blade-like body that quickly penetrates drywall with minimal damage to the wall. It is easy to install and works in both ½" and 5/8"; drywall. This means that the holding strength of the drywall is stronger - up to 90 lb. in ½" drywall and 125 lb. in 5/8" drywall! No drilling is required and they are easy to remove easily, too. The hole is small so it is a quick patch over. WallClaw anchors are 2" in length.

G

STAINLESS STEEL SCREWS

A

Self-Drilling, Self-Tapping Screws A

One screw drills, taps and fastens!

They are used extensively for sheet metal! These screws have special points that drill through the steel sheet metal quickly, then self-tap the hole and pull everything together securely. Available in 305 (18-8) and 316 stainless steel for ultimate corrosion resistance. When building in a seaside environment, use 316 stainless fasteners for adequate corrosion resistance. Imported.

Part #	Size	Hex	-K 1,000/Pk	-C 100/Pk

H63-1230	#12-14 x 3"	5/16 in.	#3	$633.87	$85.85

What About Those Point Sizes?

Self-drilling/self-tapping screws must be matched to the thickness of the material they will fasten to work properly. Unlike fasteners selected by length and diameter, these screws are specified by point size. The self-drilling point must be through the material before the self-tapping begins, so the drill point must be longer than the combined thickness of the materials being fastened. The screw will crossthread if the materials are separated when tapping begins and will cause thread stripping or drive stalling.

Gauge	Thickness
12	.1017"
14	.0713"
16	.0566"
18	.0451"

B

410 Stainless Steel Self-Drilling Self-Tapping Trailer Decking Screws B

These self-drilling countersinking stainless steel screws are designed for attaching plywood or solid-wood decking to the metal frames of truck trailers. Wings protruding from the shank cut a clearance hole, then fold up when they hit the metal decking. They work with a total metal thickness of 7/64" to 13/64". Use 2" screws for 1"-thick decking and 2-½" screws for 1-½" thick decking. Imported.

C

D

410 Stainless Steel Bugle-Head Screws C

Perfect for fastening wood, plywood and OSB panels to lighter steel studs

Like our higher-capacity F41 line, these bugle-head screws are perfect for attaching plywood panels to steel studs. The bugle-head design gives superior holding power and drives flush with work surfaces, while the tapping thread and #3 drill point help ensure that the joint between wood and lighter steel is strong. Imported.

410 Stainless Steel Self-Drilling Self-Tapping Trim-Head Screws D

Steel studs have revolutionized segments of the building industry, but how do you attach wood siding or trim boards if you don't want seriously corroded fasteners? These trim-head screws have a #3 self-drilling point which, when used with light-gauge steel, is designed for a total material thickness of .035" to .100". They're made of 410 (magnetic) stainless steel, so expect some slight discoloration. Imported.

McFeely's

410 Stainless Steel Concrete Screws E

Now there is a self-threading concrete fastener designed specifically for exposed exterior applications. Whether you are mounting a sign, locking down a park bench, installing a handrail, or just fastening a bottom plate, you won't need to worry about corrosion. Unlike most grades of stainless, the 410 series is hardened, making it perfect for these masonry fasteners. Life is full of trade-offs, though, and these screws are not as corrosion-resistant as the more common grades of stainless steel. It isn't unusual for the screws to have a very light red tint after exterior exposure. **Note:** A 5/16" hex head requires a nonstandard 5/16" diameter pilot hole. Imported.

Stainless Steel Cement Board Screws F

Now use 316 or 410 stainless steel Square Drive screws to attach fiber cement board siding, trim, or backer board to wood sheathing or wood/metal studs! Fastening the new fiber cement board products, including siding and backboards with standard drywall screws or nails, can be difficult and cause problems after installation. Screws and nails often break or bend over time. Aggressive nibs under the head of these cement board screws help them countersink flush (crucial with installing siding), and a self-drilling point helps them penetrate rigid cement board easily. Imported.

305 Trim-Head Self-Drilling 305 Stainless Steel Screws G

You'll be amazed at the difference an auger point makes on a Stainless Steel screw! Great for use with pressure-treated wood or premium materials like Redwood and Western Red Cedar because they are truly self-drilling. Passivated type 305 stainless steel provides even more corrosion resistance than the usual type 304 stainless (a bit of extra nickel helps).
Be sure to test or pre-drill when installing at the end of a board to avoid potential splits.
The shallow, #1 recess of Trim screws requires caution to avoid cam-out - pilot holes are recommended in most materials.
Not suitable for marine/oceanside use. Imported.

STAINLESS STEEL SCREWS

A

305 Stainless Steel Star Drive Screws A

These are just like the FT6 and the TT6 screws above, only in 305 stainless. They have the same flat head, six-lobe star drive recess, and unique four-corner thread with a raised-ridge design that significantly reduces the driving torque needed to sink them into even the hardest of woods. They also feature a self-countersinking nib under the head to ensure they are driven flush with the wood surface. While not the Square Drive that McFeely's is famous for, the Star Drive reduces cam-out when driving into tough, dense wood. If you are not seaside, save some money and use 305 stainless. Imported.

B

316 Stainless Steel Star Drive Screws B

Superior corrosion resistance for seaside construction

If you are building in a seaside environment, you need to use 316-grade stainless steel fasteners to achieve adequate corrosion resistance. These screws not only meet that requirement, but they also feature the easy-to-use star drive, or six-lobe-recess design, to virtually eliminate cam-out. The difference between Star Drive and Square Drive is essentially a matter of personal preference, but both offer superior performance! These Screws feature a unique "four-corner" thread that significantly reduces driving torque. Perfect for pressure-treated lumber and hardwoods, such as Mahogany and Ipe. Imported.

C

18-8 Stainless Lock Washers D

The simple way to prevent loose joints

Lock washers (or more properly, helical spring-lock washers) look as if they are broken but are actually very short coil springs that help prevent loosening due to vibration. In general, if a bolted joint is supposed to clamp materials together, adding a lock washer is worthwhile. Lock washers must be used in combination with a flat washer to be effective.(Dimensions below are rounded to the nearest fraction.) Imported

ProMax® Flat-Head Steel Screws A

Working with 2x4s? ProMax® screws make it easier!

Whether you are building 2x4 furniture or doing a bit of light framing, ProMax Optimized Thread Length™ screws will make construction easier. Extra-long unthreaded shank prevents cross-threading or jacking without drilling a clearance hole, and the 1/8"L system allows the use of the longest screw possible without the fear of back-side protrusion. These Square Drive screws have self-drilling auger points and self-countersinking nibs. Light lube coating for interior, non-visible applications. Imported.

ProMax® 305 Self-Drilling Stainless Steel Screws B

Optimized thread length prevents bad joints

ProMax stainless steel Optimized Thread Length™ screws are perfect for installing long-life premium decking materials, such as Trex® composite wood or Ipe tropical timber. They're also ideal for fastening the ACQ pressure-treated construction lumber where corrosion is a concern. The revolutionary, extra-long unthreaded shank makes sure threads cannot bridge the joint and cause jacking or fastener breakage. The auger point helps minimize predrilling. These ProMax stainless steel screws are roughly as strong as our #8 ProMax Steel NoCoRode Plus screws. These screws are not for use on docks or decks in a seaside or marine environment. Imported.

DECK FASTENERS & DECK BUILDING SUPPLIES

Cepco BoWrench® Deck Tool C

BoWrench is the easiest and fastest way to straighten an ornery board. Place one end over a joist, snug the clamp against the board to be moved, and pull the handle. The unique clamping action holds the board in position so that you can use both hands to screw it down. BoWrench is about 24"L and is suitable for use on all 2x or smaller joists. Optional BoWrench tongue and groove blocks protect the edges of T&G flooring and plywood. Under-Deck Fastening Systems for use with Fastening systems like Deckmaster and Shadoe. Track
Designed to fit over 1-½" wide joists with one of the above-mentioned fastening tracks without damaging track
Tilt the gripper and lower onto the joist
Tool is operated in same fashion

FSC-6027	Jig-A Deck	$29.22

Decking Screw System

Create a better, more-beautiful deck with the Kreg® Deck Jig™. This concealed-fastening system works together with Kreg Deck Screws to allow you to install decking without visible fasteners, so all you see is the beauty of your decking instead of a bunch of screws. The Deck Jig features hardened-steel guides to drill precisely positioned pilot holes, and to guide Deck Screws to attach decking from the edge solidly and invisibly—whether you're using solid-wood or composite deck boards. The Deck Jig makes drilling the stepped pilot holes and driving screws easy in all situations thanks to three hardened-steel guides — one at 90° to the board edge, and two at opposing 45° angles — that allow easy access when working near walls, as well as when creating strong joints where boards butt together end to end. The stepped drill bit creates a perfectly positioned pocket hole and clearance hole for the Kreg Deck Screw, while a stop collar ensures prefect drilling depth. After drilling, just drop a Kreg Deck Screw — an integral part of this concealed-fastening system — into the same guide, and then drive it with the included square-drive driver bit. It's equipped with a stop collar, too, to ensure that the self-tapping, case-hardened screw gets driven to the perfect depth. The aggressive threads bite securely into the joist while the smooth upper shank and flat-bottom head work together to pull the deck board tightly into place. The Deck Jig Concealed-Fastener System works with composite decking, as well as solid-wood decking such as cedar, hardwoods, and pressure-treated wood — kiln-dried after treatment (KDAT) recommended.

HEAVY-DUTY DECK FASTENERS

Carriage Bolts A

Carriage bolts have a nice, smooth, snag free head that is perfect for outdoor projects, deck furniture and even the deck itself. We offer top quality carriage bolts in both 18-8 stainless steel and in hot-dip galvanized. Use stainless steel carriage bolts in seaside applications or where corrosion resistance is important. Use hot-dip galvanized carriage bolts for freshwater docks, inland decks and other outdoor structures. Torque washers are recommended for use with softwoods like pressure treated lumber.
Caution: Stainless steel and the zinc in galvanized steel are very dissimilar and will react to each other. Do Not Mix bolts and washers of dissimilar metals. See McFeely's University for more information.

ThruLOK® B

An innovative structural-fastener system

ThruLOK® is a (patent pending) three-part fastening system from FastenMaster for structural wood-to-wood with the strength of a through-bolted connection. It includes a PaddlePoint™ fastener, a LOK-Nut and an engineered washer. When properly installed there is no predrilling required. First put the ThruLOK washer on the screw with the teeth of the washer facing away from the screw head. Using a ½" drill (use an 18V if using cordless), drive the ThruLOK until the washer and hex head are just above (about ¼") the wood and the point of the screw barely sticks out of the other side. Thread the ThruLOK Nut onto the point, and hand tighten until the nut is flush with the wood. Tighten with the drill. Repeat to match code compliant fastening pattern. **Note:** Point of fastener must engage in ThruLok Nut to "MIN" line or beyond.

Part #	Description	Price
FMTHR-6146	ThruLok 6-¼" Screw Bolt System (6)	$25.95
FMTHR-61424	ThruLok 6-¼" Screw Bolt System (24)	$95.99
FMTHR-0076	ThruLok 7" Screw Bolt System (6)	$29.99
FMTHR-00724	ThruLok 7" Screw Bolt System (24)	$102.84
FMTHR-0086	ThruLok 8" Screw Bolt System (6)	$39.85
FMTHR-00824	ThruLok 8" Screw Bolt System (24)	$99.99

Heavy Duty Hex Nuts C

Easy to forget, hard to build without!

For some reason, it is surprisingly easy to forget that you need hex nuts if you are building with either carriage bolts or hex-head cap screws! Heavy-duty hex-head cap screws and carriage bolts are great for exterior projects, but you need to use the correct nut, too. These heavy duty hex nuts are the perfect match for our stainless steel and hot-dip galvanized fasteners. **Note:** Stainless steel sometimes "galls" (seizes) when tightened under a load, especially with larger fasteners. To prevent this, apply Markal "Anti-Seize", which also works well with standard steel threaded fasteners.
Caution: Stainless steel and the zinc in galvanized steel are very dissimilar and will react to each other. Do Not Mix bolts and washers of dissimilar metals. See McFeely's University for more information.

C

HEAVY-DUTY DECK FASTENERS

Heavy Duty Hex -Head Cap Screws A

Joints don't depend upon threads cut into the wood for their strength. Exterior projects like decks and docks often use lots of bolts but require hard to find fasteners with significant corrosion-resistance. These heavy duty hex-head cap screws are made of corrosion-resistant 18-8 stainless steel or hot-dip galvanized steel, for use on demanding exterior projects. Use "Anti-Seize" on larger sizes to prevent galling.

Caution: Stainless steel and the zinc in galvanized steel are very dissimilar and will react to each other. Do Not Mix bolts and washers of dissimilar metals. See McFeely's University for more information.

Imported.

Epoxy-Coated Gutter Screws B

Put them up to stay - the easy way!

These 7" screws are designed for 5" gutters when used as replacements for gutter spikes or for new installations. As a replacement, the existing holes in the gutter may be reused – the screws will thread nicely into the old nail holes. For new construction, you'll need to use the screw itself and a hammer to tap a clearance hole through the gutter at each screw location. Use a ferrule or block of wood as a backup to avoid crushing the gutter. When the gutter is raised into position, each screw will already be in proper position. Our gutter screws have a #3 Square recess, a painted head to match the gutter and a galvanized shank to minimize corrosion. Two standard packages are available, each including an equal number of gutter screws, gutter ferrules and one #3 driver bit for an electric or cordless drill.

Part #	Description	Color	Bit Size	Qty/Pk	Price
GS-5310	7" Screws & Ferrules for 5" Gutters	White	#3	10	$28.48
GS-5325		White	#3	25	$49.94

GS-6325		Brown	#3	25	$49.86

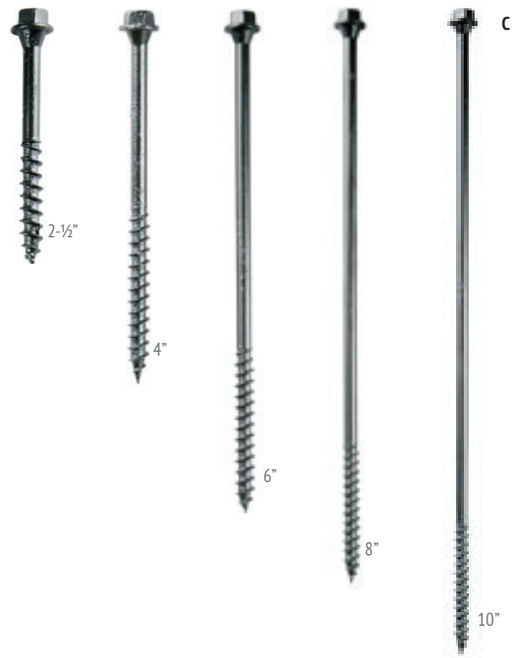

TimberLok® Extra-Long Hex Drive Screws C

Epoxy-coated steel

Log home builders first used this innovative fastener to anchor one log to the next. Deck builders, landscapers, contractors and others needing an easy-driving, heavy-duty fastener have adopted it as their own. Extra-deep threads maximize holding power in softwoods, and the large heads provide plenty of clamping force. Select a screw that is approximately 2" longer than the thickness of the material you are fastening through for best results. These screws have a hex head, a 3/16" dia. shank, 2" of thread and use a 5/16" hex nut driver. Steel epoxy-coated TimberLok screws have a slippery black epoxy coating for corrosion resistance, but will likely discolor when used in Redwood or Western Red Cedar.

EXTRA-LONG SCREWS

Wafer-Head Screws

A

Spider Drive Hex Bit

HeadLok® Extra Long Wafer-Head Screws A

Perfect for landscape timbers, heavy construction and log home insulated panels!

Wow! These super-long screws will make you put your hammer away forever! No more drilling ½" holes for rusty rebar, then slugging away with a sledge hammer for hours. With a self-drilling point, these screws go into pressure-treated lumber like a hot knife through butter. They won't back out like nails and they offer substantially greater holding power. The new Spider™ Drive (like an 8-point star) works great (you get a free bit with each pack of 25, 3 bits per carton). The 3/16" shank has approximately 2" of ¼-dia. threads and an oversize 5/8"-dia. x 1/16"-thick head. A special black epoxy corrosion-resistant coating is extra slippery. Use of these screws in Redwood or Western Red Cedar is likely to result in discoloration.

B

Extra Long Hex & Washer Head Drive Screws B

Stainless steel for corrosion resistance

316 stainless steel hex-head extra long screws are perfect for seaside exterior construction where access is difficult or corrosion resistance is important. They offer superior corrosion resistance and strength compare to 305 stainless screws. Their feature is a lobed thread design for reduced splitting and driving resistance. Thread diameter is .188. For more robust projects use the SDH screws with a thread diameter of .276 and a ½ hex head. Imported.

Plaster Washers E

Fix sagging plaster!

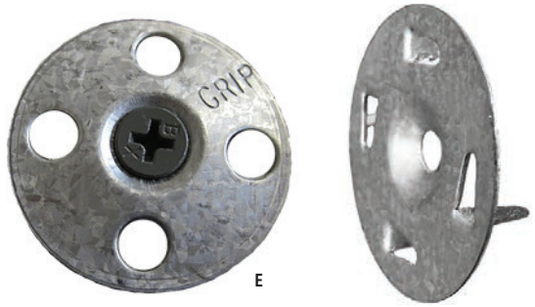

Use these handy washers with any #8 flat-head screw to spread the load and pull the plaster back against the lath. A special corrosion-resistant coating helps to prevent bleeding, and four holes promote the base coat bond with the washer. Plain plaster washers are used for most repairs. Use pronged washers with rigid foam insulation to prevent spinning during installation. Washers are 1-¼" dia. and measure about .024" thick (less than 1/32"). Use a #6 or #8 drywall screw – 1-5/8" L.

Part #	Description	-M 1,000/Pk	-C 100/Pk	-D 25/Pk
RWP-1200	Plaster Washers – Plain	$112.28	$15.34	$5.78
RWP-1250	Plaster Washers - Pronged	$112.28	$17.19	$6.45

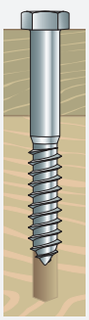

Tech Tip

Installing Lag Screws

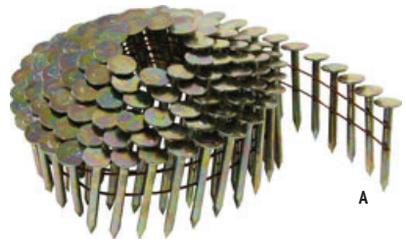

Lag screws are made of unhardened steel (or stainless steel, which is also unhardened but stronger than the mild steel used in standard lags). That means that lag bolts are soft and can easily be over-torqued and broken during installation. Worse yet, if such a thing is possible, is that many users mistakenly think that because of their size compared to standard screws, lag screws do not need pilot holes. Unfortunately, the wedging action of a large-diameter lag screw will quickly split most lumber! For best results, drill a pilot hole for the threads and a clearance hole for the shank. Drill the pilot hole through both pieces at one time for alignment, then enlarge the pilot hole to the clearance-hole size in the piece being fastened..

Lag Bolt	Pilot Hole	Preferred Cl Hole	Loose Cl Hole	Tight Cl Hole
1/4"	3/16"	15/64"	1/4"	7/32"
5/16"	7/32"	5/16"	21/64"	19/64"
3/8"	9/32"	23/64"	3/8"	11/32"
1/2"	3/8"	31/64"	1/2"	15/32"

GALVANIZED COLLATED NAILS

A

Fits most standard 23 gauge pin nailers

Pins, Brads or Trim Nails: What's the Difference?

Unlike screws, nails use a counterintuitive gauging system whereby the larger the number, the smaller the fastener. A 23-gauge pin is 0.025" in diameter, an 18-gauge brad is 0.041" in diameter with a 0.075" head, and a 15-gauge trim nail is 0.072" in diameter with a 0.10" head. Collated pins and brads are generally square cross-sections for easier collation and reduced feeding problems. Pins are headless and are typically used for very light assembly or to position things while an adhesive dries. However, installing crown molding and baseboards with a 23-gauge pin is becoming more common. Brads have small heads and are generally used to fabricate built-up moldings or for light assembly. Trim nails have a larger head than brads, usually "D" shaped or clipped, and are used for more structural applications, such as trimming doors or windows.

Pins, Brads & Trim Nails A

Top quality for consistent performance

GREX headless pins, headed brads, and trim nails are the perfect complement to your GREX or similar pneumatic tool. While the precision wire grading, superior collation, and precise alignment may not be evident at first, they certainly will be once you try a few strips in a tool. 100 per strip. Imported.

Shoot Galvanized and Stainless Steel Nails with Your Pneumatic Nail Gun!

Decks, siding, roofs – oh my! Where you live and the building materials dictate the type of nails you need to secure your decking, siding, or shingles. While the relative corrosion resistance of galvanized nails works for most applications, you may need stainless to keep your professional reputation pristine. If you work with Redwood or Cedar or are close to an ocean, stainless is the way to go! Locate your gun and note the code listed. Any product with the same code will fit! Do not substitute. Partial packages cannot be returned unless they are defective.

Pricing is subject to change at any time due to market fluctuations.

Siding & Ring-Shank Decking C

Siding nails are smaller in diameter and have smaller heads than the standard "threaded nails" above, making them less obtrusive – perfect for "blind nailing" of tongue-and-groove siding as well. These nails have a blunt point to minimize splitting and a cross-hatched head to blend with the texture of the wood. Their smaller size makes them ideal for use with premium decking materials, such as Redwood and Western Red Cedar.

Finish (Trim) D

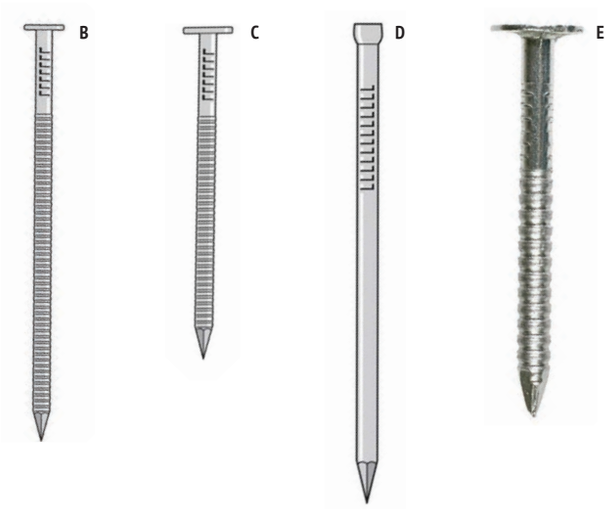

Stainless steel finish nails have a small head, body and a smooth shank, making them ideal for installation of exterior trim. They are easily "set" with standard nail sets for total concealment. In fact, in many cases, the wood fibers will simply swell back over the set nail for a no-putty installation. These nails have a blunt point to minimize splitting.

Part #	Nail Size	Length	Gauge	Shank Diameter	Head Diameter	Hardwood Pilot	-K 25lb Pk	-V 5lb Pk	-C 1lb Pk

Ring-Shank Roofing E

What could be better than stainless steel nails for attaching roofing slates? These ring shank nails have exceptional holding power in wood and plywood and a sharp diamond point for drivability.

All You Need to Know About Stainless Steel Nails

Photos courtesy of Swan Secure Products

Stainless steel nails make more sense than ever in today's world of acid rain, pressure-treated building materials and tight economics. Unlike galvanized and coated nails, stainless steel's corrosion resistance is uniform through and through, and it offers protection that isn't compromised by installation procedures that will crack, chip, or abrade coated or galvanized nails.

Naturally, stainless steel is most often used in projects where exposure to weather is most severe. However, even in mild environments, the tannic-acid levels in Redwood and Western Red Cedar will rapidly cause staining with most coated nails, and even galvanized nails will eventually succumb and leave ugly stains. Pressure-treated lumber also causes deterioration of galvanized nails as the zinc coating combines chemically with the copper salts used in the pressure-treating process.

Stainless steel nails can help avoid the need to replace siding or decking every few years because of unsightly discoloration or fastener failure. While stainless steel nails are obviously more expensive than ordinary galvanized nails, the difference is small when considering the total cost of construction and the security in knowing that the job is done right the first time.

Why Two Different Grades?

The reason is simple: common 304 stainless offers significant corrosion protection in all but the harshest environments. For applications exposed to large concentrations of salt, such as seaside docks, decks or buildings, 316 stainless offers more protection through its increased nickel content.

What About Strength?

Stainless steel nails are STRONG! Wire tensile strength ranges from 125,000 to 145,000 psi. The ultimate lateral strength of stainless nails is about 20% higher than that of ordinary plain steel nails; stiffness is about equal.

About the Shank Style

"Ring shank" nails are most popular because they offer superior resistance to withdrawal. Annular rings on the shank act like one-way barbs as the nail enters the wood, locking it in securely. "Ring shank" nails are not suitable for use where substantial shear, racking or lateral loads are present.

Note: Pilot holes are rarely needed with stainless steel nails, any more than they are needed with common steel or galvanized nails. However, you can eliminate splitting wood or bending nails by predrilling. Generally, pilot holes should be ¾ of the length of the nail used, for best results.

GUTTER SCREWS

A

B

C

Gutter Screws

Gutter Screw enables you to replace old popping gutter spikes once and for all. Super-sized threads, wider than gutter spikes, tightly fill old, worn spike holes. This heavy-duty screw gives unmatched holding power, even in old spike holes.

Part #	Description	Price

7 in. Gutter Screws, Star Drive *Qty:50* A

T-30 drive virtually eliminates cam-out during hard-to-reach installations. Durable UV-resistant head paint. Thick base coating guaranteed not to rust or react with aluminum. FREE driver bit included. Made of Steel.

1470-GS-WH	7 in. Gutter Screws, White	$59.95
1470-GS-BR	7 in. Gutter Screws, Brown	$59.95

7 in. Pan Head Aluminum Gutter with 5 in. Ferrules *Square Drive!* B

#3 square drive virtually eliminates cam-out during hard-to-reach installations. Durable UV-resistant white and brown head paint matches most gutter systems. Thick galvanized base coating guaranteed not to rust or react with aluminum. FREE driver bit included. Made of 2024 Aluminum.

GS-5310	White - Qty:10	$28.48
GS-6310	Brown - Qty:10	$28.48
GS-6325	Brown - Qty:25	$49.86

7 in. Aluminum Gutter Screw, Hex Head C

#3 square drive virtually eliminates cam-out during hard-to-reach installations. Durable UV-resistant white and brown head paint matches most gutter systems. Thick galvanized base coating guaranteed not to rust or react with aluminum. FREE driver bit included. Made of 2024 Aluminum.

Titen Hex Head Concrete Screws E

The Titen Turbo screw anchor features an innovative Torque Reduction Channel to trap drilling dust where it can't obstruct thread action, significantly reducing binding, stripping, and snapping without compromising strength. The patented reverse thread design enables smooth driving with less torque while providing superior holding power. The Torque Reduction Channel also allows more space for dust to help prevent anchors from bottoming out in smaller-diameter screw holes. The Titen Turbo screw anchors feature a serrated leading edge to cut into concrete or masonry, and a pointed tip for fast, easy installation in wood-to-concrete and wood-to-wood anchoring applications.

410 Stainless Steel Concrete Screws F

Now there is a self-threading concrete fastener designed specifically for exposed exterior applications. Whether you are mounting a sign, locking down a park bench, installing a handrail, or just fastening a bottom plate, you won't need to worry about corrosion. Unlike most grades of stainless, the 410 series is hardened, making it perfect for these masonry fasteners. Life is full of trade-offs, though, and these screws are not as corrosion-resistant as the more common grades of stainless steel. It isn't unusual for the screws to have a very light red tint after exterior exposure. **Note:** A 5/16" hex head requires a nonstandard 5/16" diameter pilot hole. Imported.

GREX NAILERS, PINS & BRADS

A

2" 18-ga. Pneumatic Brad Nailer A

Presenting the Green Buddy (TM), a game changer in a very serious game!

We admit it—the 18-ga. Brad Nailer is the go-to nailer on your bench or in your toolbox, but try to find a decent one these days. Presenting the Green Buddy™, a game changer in a very serious game. From trim carpenter to cabinetmaker, Green Buddy™ will be the differentiator as you master your trade. It's the solution if you're looking for control, precision, performance, and dependability. The patented Integrated-Safety™ accurately drives at any angle, while the narrow nose gets you into tight spaces. Posit-Fire™ and Posit- Lock™ ensure that nails are driven to the correct depth time after time with no jamming. Dual-firing options allow sequential or contact firing modes. Auto trigger lockout prevents empty firing and alerts you when you need to reload. A swivel air coupler keeps your air hose tangle-free, and a rear exhaust directs airflow away from your face. The powerful motor drives 2" brads into hardwoods. In pursuing excellence, we've done our part – from designing to constructing the Green Buddy™.

Part #	Price
GRX-1850GB	$309.00

B

GREX 34° 15-ga. Pneumatic Trim Nailer B

Drive up to 2-1/2" nails in tight spots

GREX's 15-ga. The angled trim nailer has all the power you need to install hard- or softwood moldings or fasten particleboard, even when using 1"- to 2-½ "L nails. It weighs just 5.2 lb., minimizing fatigue, which is particularly important when working overhead or in tight quarters. The "slide-in" reloading system holds up to 100 nails per charge so that you can get plenty of work done between refills. Jams are cleared quickly by removing the quick-release nose cover, which also features a rubber safety tip to prevent marring the workpiece. Exhaust air is easily directed away from the operator by rotating the top-mounted port. The AF64 trim nailer includes a heavy-duty carrying case, a small bottle of lubricant, and safety glasses.

Part #	Description	Price
GRX-AF64	AF64 15-ga Trim Nailer, 1" to 2-½"	$325.00

C

Pneumatic Full Round Head Framing Nailer C

Fires 2" to 3-1/2" x .113", .120", .131", and .148" dia. shank nails

The GREX 21° framing nailer is designed for job sites. It accepts full round head, plastic strip collated nails in four shank sizes, so you can shoot the nails you need without changing guns or adjusting guides. Changing a convenient depth dial quickly sets nails to the proper depth. Loading more nails is fast and convenient, thanks to the top-load magazine. Pull back on the loader spring, drop in the nail strip, and release the loader – a handy window indicates when you are running low. "Spikes" on the safety foot help position the gun for toe-nailing and activate the trigger for contact firing. Includes a high-impact plastic storage case, safety glasses, and a small container of air-tool lubricant.

Part #	Description	Price
GRX-9021	SF9021H Full Round Head Framing Nailer	$439.00

D

E

23-ga. Pneumatic Pin Nailers

2" pinner shoots industry's longest pins and attaches hardwood mouldings almost invisibly!

GREX 23-ga. Pinners shoot a fastener that is virtually impossible to detect. Instead of clamping furniture moldings in place while the glue dries, let a few strategically placed pins do the work. There is virtually no need for filler before finishing, saving time and reducing problems caused by color mismatches as the wood ages. Top-rated GREX pin nailers are compact and lightweight (just 2.7 lb.) with a slim profile for maximum maneuverability. The new P650L has a lock-out feature to prevent dry shots when the magazine is empty. Shoots pins from ½" to 2" long. Both automatically adjust to suit the loaded fastener length. Their narrow nose design allows access into tight spots, and nose covers are removed easily if a jam occurs. Both tools have a double trigger to help prevent accidental firings, and their rear-mounted exhaust is silenced. Magazine-indicator windows help you know when it's time to reload. The P645L drives 23-ga. pins from ½" to 1-¾"L, while the P635 drives 3/8" to 1-3/8"L pins. Both tools feature magazines that automatically adjust to fit the selected length, narrow nosepieces for maneuverability, removable nose covers to clear jams, double triggers to prevent accidental firings, and silenced, rear-mounted exhausts. The P635L prevents firing when less than six pins remain in the magazine. These tools include a heavy-duty carrying case, safety glasses (except model P635L), and a small bottle of air-tool lubricant. Imported.

Part #	Description	Price
GRX-L650 D	P650L 23-ga Pin Nailer ½" to 2" w/ lockout	$489.00
GRX-P635 E	P635L 23-ga Pin Nailer 3/8" to 1-3/8" w/lockout	$218.00

Pricing is subject to change at any time due to market fluctuations.

GREX NAILERS, PINS & BRADS

Staplers F

Choose from three styles that cover a range of stapling needs and staple sizes

Built for high performance with power and a quick air-recycling time, these staplers are ideal for light trim moldings, drapery cornices, and roofing underlayment paper. Despite their small size and lighter weight, they don't sacrifice power or quick air-recycling time, making them high-performance tools. They perform at relatively low air pressures and operate at 20 – 40% lower air consumption than most competing models. Each features a patent-pending trigger valve, rear exhaust, an easy pull-up magazine latch, and a heavy steel head cap that works as a hammer. The GRX-2116AD is similar to the GRX-71AD, except it uses the Senco A-series staples, while the GRX-A11AD uses Arrow T50 and Rapid A11 series staples. Imported.

KREG® TABLES

A

Kreg Adaptive Cutting System A

Precision cutting system for solid-wood, plywood, and panels

The Project Table offers unparalleled versatility, precision, safety, and portability by creating a multi-use cutting center that can adapt to your needs. When working with solid wood, the Adaptive Cutting System makes it easy to precisely and safely crosscut, rip, cut miters, and more. It also makes cutting plywood sheets and large panels down to size more straightforward and accurate. The Adaptive Cutting System makes this all possible, and more so by combining the advantages of a track saw with the unparalleled versatility of a Project Table that supports and positions materials precisely.

At the heart of the Adaptive Cutting System Master Kit is the Plunge Saw and 62" Guide Track. The track guides the saw precisely on your cutline and protects against splintering to ensure that you get straight, smooth cuts. The Plunge Saw features a fully-shrouded blade, safety features like a retractable riving knife, and anti-kickback protection that allows the powerful, variable-speed motor to cut safely while your hands stay away from the blade. Additional Shipping Charges apply to some items.

B

Precision Router Table B

Kreg® has redesigned their big router table to improve the precision with a new self-squaring fence system. The new fence features a T-square style design that always stays parallel to the miter/T-slot and adjusts easily without deflection. The easy to use measuring scale is accurate and a micro adjust wheel helps to make even more precise set-ups. The table top provides a 24" x 32" work surface with an easy glide laminate top. It is reinforced with steel struts so it's always flat. The heavy-gauge steel legs of the multi-purpose stand can be adjusted from 29" to 35" for custom height to the operator's comfort level. Leg levelers ensure wobble-free footing. Router Table Equipment includes: MDF top 24" x 32", Phenolic Insert Plate 9-¼" x 11-¾" x 3/8", Steel Stand 20" x 28", and Self-squaring Router Fence. Fence is 37" L x 4" W x 6" H, Tabletop is 34" L x 27" W x 3" H, and Stand is 28" L x 20" x 31-35" H. Add casters for mobility. Imported.

Part #	Description	Price
KRT-1015	Router Table Fence	$229.00
KRT-1025	Router Tabletop	$219.00
KRT-1035	Universal Steel Stand	$199.00
KRT-3100	Router Table Switch	$39.99
KRT-3400	Router Table Setup Bar Set	$89.00
KRT-7850	Router Table Stop	$44.99
KRT-3050	Level-Loc Ring Set	$29.99

C

Benchtop Router Table C

Kreg's® new and improved Benchtop router table has a 9-¼" x 11-¼" insert plate with their new Level-Loc reducing rings. Simply twist into place and lock flush with the insert plate surface every time, making router changes quick and easy. Three Level-Loc rings (1", 1-3/16" and 2-5/8") are available. Also, the new heavy-duty aluminum fence has cam clamps that allow you to quickly and confidently make adjustments. They have kept the same great 16" x 24" MDF Table Top with edge banding and Easy-Slide™ Micro Dot surface that keeps your wood moving smoothly without drag. They also have kept the sturdy heavy-duty steel stand with a wide stance and rubber feet for noise and vibration reduction.

Part #	Description	Price
KRT-2100	Benchtop Router Table	$249.00
KRT-3050	Level-Loc Ring Set	$29.99

Pricing is subject to change at any time due to market fluctuations.

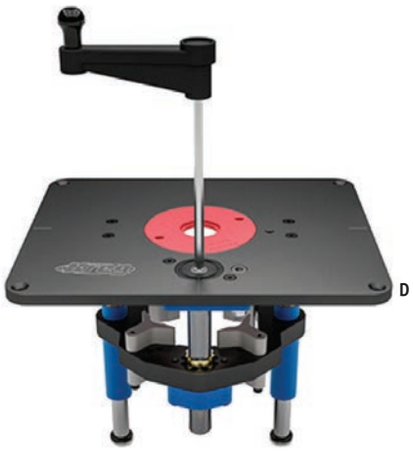

Router Lift D

No more reaching under the table to make adjustments or change bits!

Using the lift's crank to adjust the height of your router, adjustments can be made both easily and precisely from above the table. Once the height has been approximately set, fine-tuning is made possible with built-in micro-adjustment scale. Also, the micro-adjust scale can be zeroed out at any point inorder to make exact bit height changes.

Features:

- Machined-Aluminum Router Carriage Accepts 20+ popular routers without requiring pads or adapters.
- Fits all Kreg router tables and many competitive brands.
- Above-the-table setup changes for table-mounted routers.
- Above-table collet access allows fast, easy, above-table bit changes
- Precision indexing ring with micro-adjust scale simplifies bit height changes.Micro-adjust dial with fractional markings at every 1/64" and hash marks ever .002" in between. One full revolution equals 1/16"
- 3/8" x 9-¼" x 11-¾" (9.5mm x 235mm x 298mm) hard-anodized aluminum plate won't sag, resists scratches
- Bearing-guided carriage provides smooth operation

Kreg Clamping Table Set F

An amazingly versatile clamping station for Kreg Joinery and a variety of other wood project tasks

The Kreg Clamp Table is the ultimate clamping solution for Kreg Joinery and works with the entire family of Clamp System Components. If you've ever struggled to get perfectly flush Kreg Joints, failed to get your clamps positioned exactly where you need them, or needed an extra set of hands around the workshop, the Kreg Clamp Table is your perfect solution.

Note: This is the same table included in the Clamp Table and Steel Stand Combo, but comes without the stand so that you can place it wherever you need it.

Additional Shipping Charges apply.

Track Horse G

Make Any Place Your Work Space With A Versatile, Sturdy, Expandable, And Portable Work Support

Thanks to dual-mode clamping (with an included Kreg Bench Clamp), adjustable legs, and the ability to accept a sacrificial cutting surface, the Track Horse goes beyond the capabilities of an ordinary sawhorse.

Features:

- Aluminum track accepts included Kreg Bench Clamp
- Keyhole slots in ends accept Bench Clamp for vise-style clamping
- Adjustable to six different working heights.
- Heavy-gauge steel construction for long-lasting strength
- Secure clamping with an included Kreg Bench Clamp
- Accepts a sacrificial wood surface for protection while cutting.
- Support brackets accept 2x4s for joining a second Track Horse
- Supports up to 2,200 lbs. when set up as a pair.

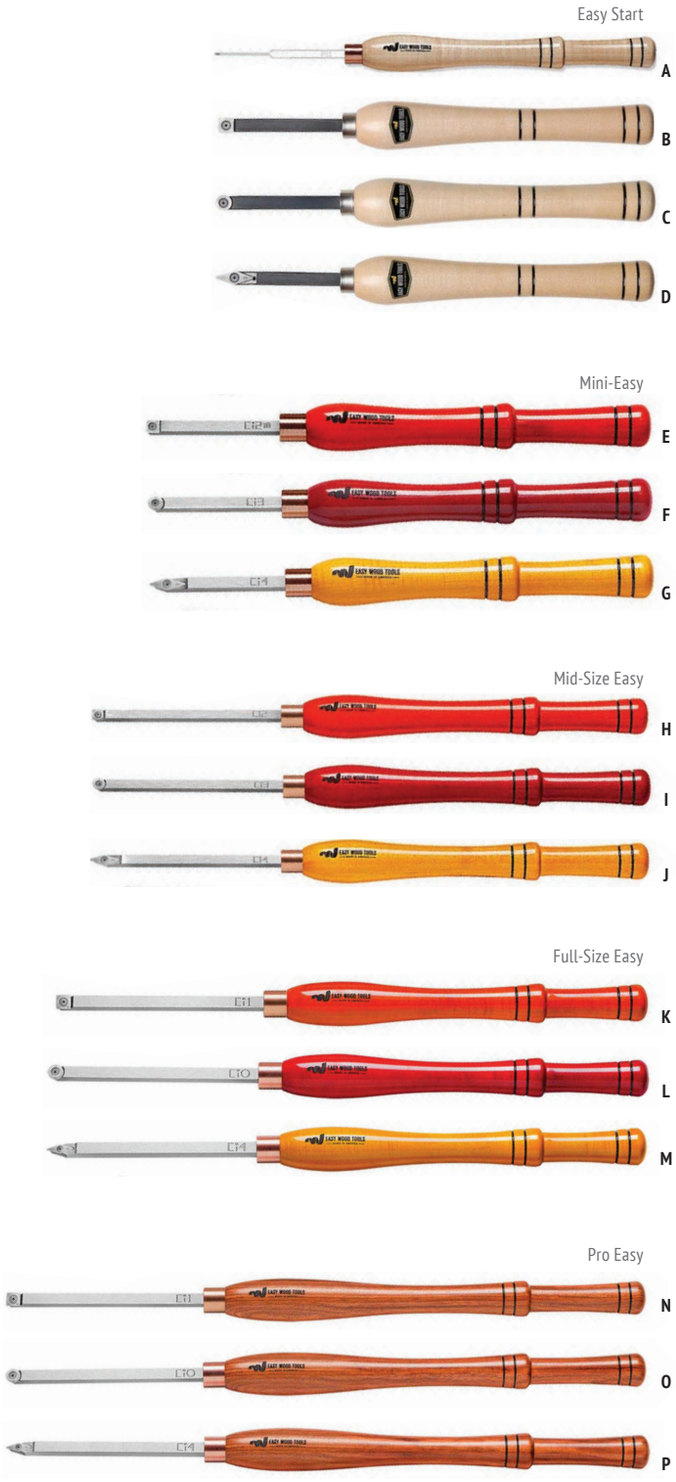

This item will ship directly from the manufacturer. Additional Shipping Charges Apply.

EASY WOOD

Easy Wood Tools™ Woodturning Tools

Wood turning has never been this easy

Want to make pens, goblets, wine stoppers, spindle legs and small bowls? Easy Wood Tools has taken the guesswork out of getting started in your woodturning venture. An inexpensive "starter set" is great for the novice. The Easy Start tools have shorter handles for better control and are black-oxide coated instead of having stainless steel shafts. Start out small. As you progress to larger workpieces and deeper bowls, expand your arsenal of tools - longer handles deeper curves. The technique is easy, just hold the tool flat and level, advancing the tool into the wood, and using the shaped carbide to produce the intended curve, bead or cove.

No matter which set you're using, the carbide cutters are the same, so you'll be able to get the same results (with practice). The Genuine EWT Carbide Cutters last a really long time due to their perfected 3Gs (Grade, Grind, and Geometry). Make sure to rotate them around so you use them ALL up. When they finally get dull, don't spend hours resharpening – just replace them. They come in several shapes and sizes of round, square, square with radius edges and a pointed diamond version.

EW-3700 P	Pro Easy Detailer®	(EW-7400)	$149.99

Turning Tools

Come in five lengths: easy start, mini, mid size, full size and pro.

Rougher: The square carbide cutter is perfect for removing bulk material. With an available R2 cutter installed, they can also smooth the outside curve of any project.

Finisher: The round carbide cutter is designed for shaping cuts on the inside curves of bowls and spindles.

Detailer: Use this diamond-shaped carbide cutter to create final details, such as coves and beads on spindles and bowls.

Hollowing Tools

Come in three lengths: mid size, full size and pro.

Hollower #1: Use this straight bar to remove material from the center of a vessel. It can safely reach 4-1/2" past the tool rest on the lathe.

Hollower #2: A tool built with a slight curve for hollowing out the beginning of the curved portion of a vessel (bowl).

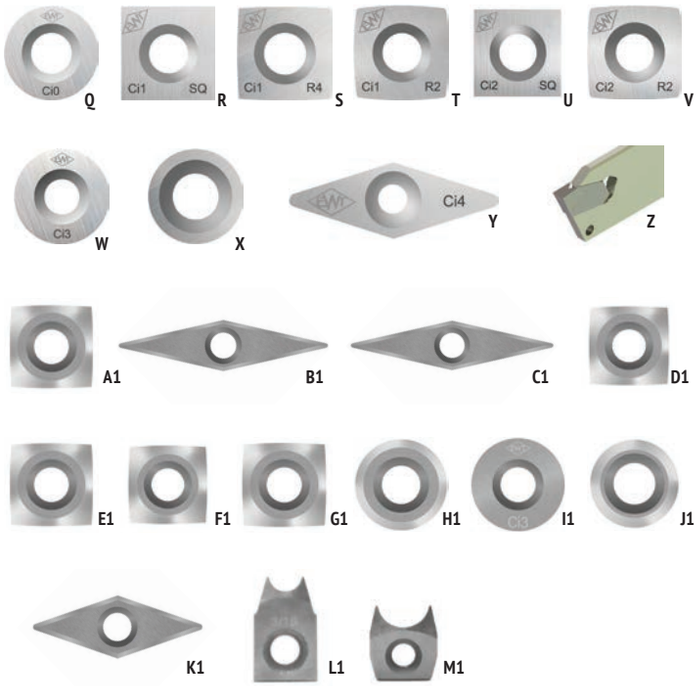

Hollower #3: A tool built with a much greater curve for hollowing out the deeper portion of the vessel and hollowing the curve up to the lip of the opening.

Pricing is subject to change at any time due to market fluctuations.

Easy Wood Tools™ Easy Chuck™ System

An easy lathe setup method

Easy Wood Tools have taken a complicated (and possibly dangerous) power tool and removed the guess work of the setup. With just one chuck and six easy to install, interchangeable sets of jaws, you can change out the system to accommodate and securely hold about any project piece in 30 seconds or less. The patent pending Easy Jaws™ uses a snap-lock technology requiring no screws or wrenches. Simply take the supplied jaw key, depress the snap-lock in the master jaw, and each jaw will slide right out. Grab the next size you need, and slide it in place until you hear the snap. The rounded jaw corners prevent knuckle injury during setup. The Easy Chuck's Zoom Ring allows you to lightly grab your workpiece and then tighten it with the supplied chuck key. Easy Chuck is supplied with a 1/8" jaw key for jaw release and setting the spindle screw plus a 5/16" hex T-handle for final jaw tightening. The 4" chuck is offered in three spindle threads with no internal adapter. The spindle adapter has 1-¼" – 8tpi female threads to 1" – 8tpi male threads for a 1-¼" spindle lathe, and is supplied with a double set screw so you can run the lathe in reverse for sanding. Wrenches are included for assembly. The aluminum faceplates are etched with their thread size so you know you are grabbing the right one. Optional Lexan® chip deflectors keep the shavings headed for the floor, not on you. Spend more time making your project and less time setting up your lathe.

Easy Wood Live Center N

Every lathe has a live center (it supports the workpiece from the tailstock end opposite the chuck or spur drive). They rotate with the work and are designed to carry only a radial load. We can almost guarantee that yours will eventually wear out. But you can replace yours with our Easy Live Center™ that lasts and lasts and lasts! It features precision angular contact bearings that are sealed and lubricated; it requires no maintenance; and it handily tackles both thrust and radial loads. An angular contact bearing combined with a high quality radial bearing in the nose means our live center produces long-lasting accuracy that can last a lifetime. Adjustable double-ended center point with flat or sphere point ends. Center point removable allowing 5/16 in. through hole. Easy Cone Set™. Cones provide greater hold strength to spherical shapes like bowls or goblets, up to 4 in. in diameter from the tailstock end of your workpiece opposite your chuck. The cones support without damaging your finished surfaces, too and increase your project creativity. Our Aluminum Tip and Bull Nose Easy Cone Set™ work in a convex or concave orientation for increased versatility. Fits ¾ in. -10 thread live center only. Machined 6061 aluminum for strength and durability. 4 in. diameter cone / nominal 1.¼ in. diameter point. Live center not included.

SKU	Name	Price

Wood Dowels 0

When you're storing dowels, it's important to do so in as stable an environment as possible. Recently, McFeleey's(TM) made the decision to move away from storing dowels in our own warehouse and to use a top-notch U.S. manufacturer to ship these direct to you. Allow 2-3 weeks for delivery. To ensure package integrity, dowels do have package minimums that we cannot waive or mix and match. McFeely's(TM) dowels are manufactured using only high grade Appalachian hardwoods, dried for months in a yard and fished on a kiln to a targeted 8% moisture. Dowels longer than 4" are custom made and not eligible for returns. Please check your project specifications before ordering. Teak dowels are available- call for pricing. All dowels are drop shipped from the supplier and shipping is based on the actual shipping charge. Most ship UPS except the largest ones, which are marked with an asterisk and require truck freight. **Note:** Wood prices are so volatile, these prices cannot be guaranteed. Prices are as of April 2021 and may change without notice.

Mushroom Button Plugs A

These button plugs are slightly tapered to ensure a tight fit. When fully seated, the domed head will protrude above the wood surface. The grain runs in the direction of the plug thickness, as if it were cut from a dowel. Tenon is 1/8"L with a 2° taper.

Part #	Description	-M 1,000/Pk	-C 100/Pk	-D 25/Pk
BH-1103-M	3/8" Maple (BBM)	$103.19	$6.43	$2.72

BH-4104-M	½" Walnut	$161.82	$8.90	$3.75

Face Grain Furniture Plugs B

If you select grain pattern and color carefully, grain orientation of these plugs will allow you to match the grain and disguise the unwanted screw hole. These plugs also avoid the darkening effect experienced when finishing end grain plugs. Length is ¼" with a 2° taper.

Part #	Description	-M 1,000/Pk	-C 100/Pk	-D 25/Pk
FH-1203-M	3/8" Maple (BBM)	$143.45	$14.00	$5.81

FH-4204-M	½" Walnut	$187.75	$17.14	$7.15

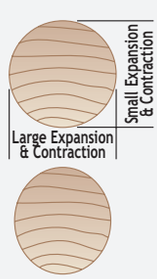

End Grain Furniture Plugs C

Often used for a decorative effect, since the end-grain orientation of the plugs absorbs stain or finish more readily than flat grain, thus resulting in a darker highlight.

Part #	Description	-M 1,000/Pk	-C 100/Pk	-D 25/Pk

Dowel Tech

Most woodworkers don't give dowels much thought, until they go to use one and discover a) it isn't straight, or b) it isn't round. As hard as it may be to believe, dowels are machined and sanded round at the time of manufacture. A dowel's cellular structure causes it to shrink and swell with changes in humidity, just like the lumber in a cabinet door. However, dowels are often required to fit into a hole, and that's where the trouble begins. Since they are round, dowels have equal proportions of edge grain and face grain do not absorb moisture evenly, resulting in the oval dowels. Most of us have dealt with this at one time or another. (3rd bullet) Aliphatic resin (yellow glue) contains water and causes the dowels to swell. This can work for or against you!

Top tips:

- Store dowels in as stable an environment as possible.
- Use dowels as soon after purchase as practical.
- Aliphatic resin (yellow glue) contains water and causes the dowels to swell – can work for or against you!
- If the dowel is too small, check the dowel diameter and the hole diameter. Run-out in drill presses and drill bits can cause oversized holes!

Pegs and Spindles A

Your project is not done until you've added those little extras that make it special. Whether it is a chair, a desk, or a bookcase, that final touch can make the difference between ho-hum and an heirloom! We offer shaker pegs, and several sizes of spindles. All items are drop shipped from the supplier to keep them in the most stable environment as possible to avoid warping. Allow 2–3 weeks for delivery.

F

General® Dow'L Simp'L™ E

Versatile and economical!

This innovative jig makes edge joints, 90° (right-angle) joints, and even face joints easily and accurately. Three repositionable hardened steel drill bushings center the drill bit in 5/8", ¾", or 1" thick stock for use with ¼", 5/16", and 3/8" dia. dowel pins. For material up to 1-¾" thick, the jig may be alternated from face to face to provide balanced doweling. "Vee" notches in the jig make alignment easy, so dowels will line up every time. Face joints are easily accomplished by placing the jig against a stop clamped to the material. The kit includes ¼", 5/16", and 3/8" dia. brad point drill bits and stop collars, three pairs of dowel centers to match, twenty-two 3/8" dowel pins, and the doweling jig. Imported.

Part #	Description	Price
SPC-0031	Dow'L Simp'L Dowelling Jig Kit	$37.92

General® Dowel Centers F

The quickest and most accurate way to locate, transfer and match dowel holes. The eight-piece set includes two of each size: ¼", 5/16", 3/8" and ½". Dowel Centers are made from nickel-plated steel. Imported.

Part #	Description	Price
GT-888	Dowel Centers	$5.45

General® Pro Doweling Kit A

A dowel joint is only as good as the line-up of the holes used to hold the pieces of wood. If you are "off" by a silly millimeter, it won't look good, especially to your perfectionist eye. The E-Z Pro Doweling Jig is designed to produce precision edge-to-edge, right angle and edge-to-surface joints. Three sizes (¼", 5/16" and 3/8") of dowels are included while the jig has three drilling positions to accommodate 5/8", ¾" and 1" thick materials. A steel stop allows you to vary the depth of cut. The kit includes: a doweling jig, ¼", 5/16" and 3/8" brad point drill bits, dowel and tenon set from 3/16" ID to ½" OD, ¼", 5/16" and 3/8" drill stops and 10 each ¼", 5/16" and 3/8" dowel pins. Imported.

Miller Dowel Joinery C

A superior natural joinery system

You may have guessed it already, but we're big on screws. Yet, even we have to admit there are times when natural joinery just looks better. The problem has been that natural joinery takes a lot longer to pull off, so compromises, such as screw caps, have been around for some time.

The Miller Dowel system comes close to finally bridging the gap between the convenience and strength of screws and the aesthetic joy and superior material interaction of natural joinery. The key to the system resides with the patented, stepped design of the Miller Dowel and its corresponding drill bit.

To use the Miller Dowel system, you simply align and secure the wood pieces to be joined. Next, you drill the stepped pilot hole for your chosen dowel, using the Miller Dowel drill bit. Spread a small amount of glue on the ribbed sections of your dowel, and insert it so that it drops roughly two-thirds of its length. It will self-center with the second board even if you haven't pre-glued. Tap the dowel until it's fully inserted, and trim or sand the raised portion. It's that easy to use, and by doing so, you avoid the risks of rot, rust, nail pops or splitting.

The Miller Dowel system comes in a number of different materials: (Birch, Cherry, Red Oak, & Walnut). Select 1X kits for joining wood pieces up to 1-1/8", 2X for wood pieces up to 1-5/8" and the Mini X for joining ½" stock (maximum ¾"). Imported.

JKF-0550	½ - 13 (Bolts)	2-½"	1-1/8"	1"	$1.90

Snap Lock Knobs **E**

Snap lock knobs are uniquely versatile. Molded with a hex-hole designed to fit hex-head bolts, hex-cap screws, hex-nuts and lock nuts of varying size, threading, length and material. These knobs allow the user to install their own fasteners by simply pushing the nut or bolt into place. The perfect knobs for tools, jigs and fixtures. Available in a variety of knob styles and fastener sizes.

Kreg® AutoMaxx F

New reduced input force for easier clamping. The Kreg Auto Maxx face clamps kind of set-and-forget system. Set the pressure once using the easy-to-regulate thumbscrew and get the same pressure no matter what the thickness of the material you are clamping. It doesn't matter if you switch from wood to metal to plastic! Available in face-clamp and bench-clamp styles. All have large pivoting jaws. The face clamps have large, contour, padded handles for operator comfort. (That's you!) The clamps are all metal for durability and years of use The 3" clamp is 13" L x 5-¼" W x 1-¾" D. The 6" clamp measures 15-¼" L x 5-¼" W x 1-¾" D. The Bench Clamp Kit includes a 3" Bench Klamp with the Klamp Plate that can be mounted into a benchtop to create an incredibly versatile 360° clamping station. Imported.

Part #	Description	Price

I

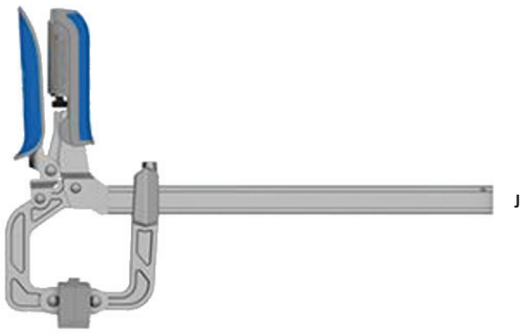

Kreg 90-Deg. Corner Clamp I

The easy way to hold 90-deg. corner joints and T-joints in boxes, cabinets, and cases.
The 90-deg. Corner Clamp is the fastest, easiest-to-use corner clamp you can buy thanks to Kreg Automaxx® auto-adjusting technology
Thanks to Automaxx® auto-adjust technology, all you have to do is squeeze the clamp handles. The clamp will automatically close with the amount of pressure you have set, regardless of the material, whether you're using thin plywood for drawers, or materials up to 1" thick.

J

Kreg Bench Clamp with Bench Clamp Base K

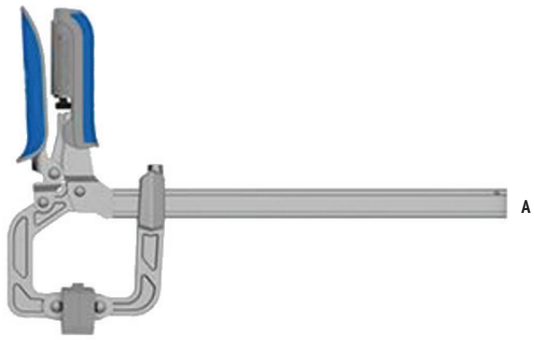

By combining a 3" Bench Clamp with a Bench Clamp Base, this kit allows you to take the power, versatility, and convenience of a Kreg Bench Clamp almost anywhere.
The Bench Clamp Base (also available separately) is made from durable cast aluminum. It can be mounted quickly and easily to any work surface that's equipped with ¾" or 20mm bench dog holes. Or, you can simply drill a hole in any work surface, and attach the Bench Clamp Base. You can also remove the Bench Clamp Base just as easily when not in use, or to move it to another location. Plus, the base swivels to offer 360° clamping capability.

Part #	Description	Price
KR-1120-WB	Kreg Bench Clamp Base	$69.99
KR-1120-BS	Kreg Bench Clamp with Bench Clamp Base	$24.99

K

CLAMPS

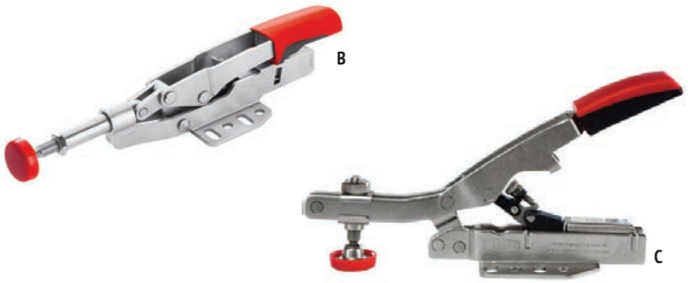

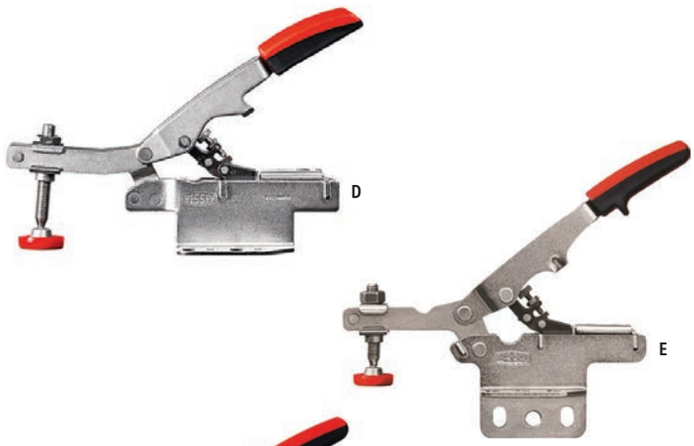

Kreg Auto-Adjust Bar Clamp A

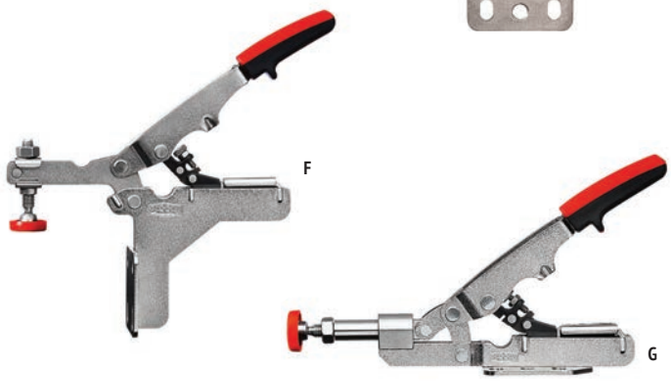

When you want the durability and auto-adjust convenience of Automaxx® clamping, but you need more clamping capacity, turn to Auto-Adjust Bar Clamps with Automaxx Technology. Just like other Kreg Clamps, these bar clamps adjust automatically when you change material sizes.

Just slide the clamp jaws against your workpiece, and then squeeze the handles. Automaxx technology does the rest, closing the clamp with predictable, dependable clamping pressure every time. That clamping pressure is easy to regulate, as well, thanks to a simple thumbscrew that dials in the pressure you need, from gentle to highly powerful clamping.

Part #	Description	Price
KR-BC-8	8 in. Auto-Adjust Bar Clamp	$39.99
KR-BC-16	16 in. Auto-Adjust Bar Clamp	$44.99
KR-BC-24	24 in. Auto-Adjust Bar Clamp	$49.99

Bessey Auto-Adjustable Toggle Clamps

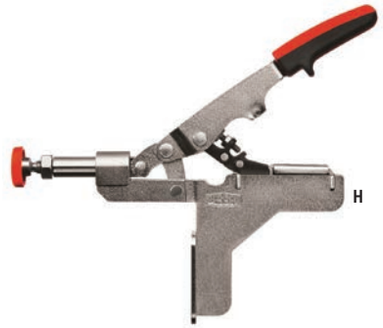

Bessey Auto-Adjustable clamps are the best thing since sliced bread! Well, that may be a stretch, but they are a huge improvement over the competitor's version. Auto-adjust toggle clamps automatically adjust to the size of the part, which eliminates time consuming manual adjustment of the clamping spindle and improves safety conditions. They have a set-and-forget feature that results in the same amount of pressure, regardless of the thickness of material being clamped, or you can easily adjust to increase or decrease the amount of pressure needed for the application from 25 to 550 lbs. Counterclockwise rotation will increase the pressure, while clockwise rotation will decrease the pressure. Maximum holding capacity is almost 700 lbs. The removable plastic clamp pad is 7/8" diameter. The hardened steel body is nickel plated for corrosion resistance, and the ergonomic handles are made from polypropylene and thermo-plastic for heat resistance. The base plate holes accommodate M6 or ¼" fasteners.

Bessey has added two new auto-adjustable toggle clamps to the product line, for those of you who need a vertical base mount or an in-line mount. They both function the same way as the originals; just mount them to your workbench to fit your needs. Imported.

McFeely's

Bessy Strap Clamp I

A special high tensile, woven polyester ensures this 23' L strap will not stretch and is so dense that wood glues do not penetrate the material easily, which prolongs the life of this tool. The strap draws up from both sides, providing maximum pressure equally on all sides. Use Vario corner clips, which have twin-tilting pressure pads that auto-adjust from 60° to 180° to apply pressure on the corners and angles. Four Vario corner clips are standard equipment and they are available in six packs for additional needs. An integrated rewind mechanism operates by a cranking handle that eliminates tangling and damage to the strap. Weighs 1.4 lbs. Imported.

Part #	Description	Price
BC-0700-N	23' Strap Clamp	$29.19
BC-9700	Vario Corner Clips 15.75 for Strap, 6/Pk	$22.37

J

Bessey Angle Clamps K

Self-adjusting clamp for corner joints

Lots of clamps allow you to make miter or butt corner joints accurately. This one lets you join boards of different thicknesses and provides access to the back side of the joint if you are installing screws. Unlike other angle clamps, tightening one adjustment screw secures both workpieces, so you can secure the joint quickly when doing tricky glue-ups. Imported.

A

Bessey Corner Clamp A

Nothing works well if the corners aren't a true 90°, so make sure all your projects are "squared up" with the Bessey corner clamp. Mounting holes are available to clamp securely to your workbench. Each side adjusts independently with its own ¼" spindle. The throat is ½", the jaw height is ½" and the jaw length is 2-½". Use for light-duty clamping. Imported.

Part #	Description	Price
BT-WS1	90° Corner Angle Clamp	$11.25

B

Bessey Face Frame Clamp B

The cabinetry clamp is designed to combine the multiple steps of face frame cabinet installation into one easy process. Face frame stiles can be tightened, aligned, pre-drilled and fastened while the clamp is in place. The clamp holds the individual cabinet edges together while also keeping the faces along the joint flush.
There is also an integrated pilot-hole drilling guide on one end. This guide flips out of the way so you can drive screws to connect the cabinets without removing or repositioning the clamp.

Part #	Description	Price
BC-FF8511	Bessey Face Frame Clamp - Each	$30.70

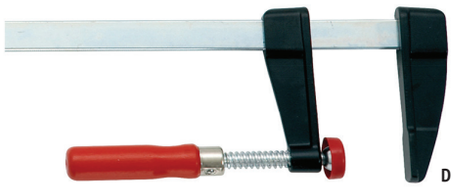

C

Bessey Bar Clamps C

You can never have too many for your glue-up projects

These multifunctional bar clamps/ spreaders can be used to squeeze parts together, or use the quick-release button and turn them into a spreader to push them apart. They generate a clamping force of up to 445 lbs. The one-handed squeeze handle makes it easy to position your pieces, hold them where you want them while you sneak up on them with a smooth-operating bar clamp. Soft pressure caps protect your project from scratches and dents. Imported.

Part #	Throat Depth	Clamp Cap	Spreader Capacity	Weight	Price
BT-EZ158	3 in.	6 in.	6-½" – 13-½"	1.2 lb	$24.10

D

Bessey Mighty Mini D

Faster than a C-clamp!

You don't really need a heavy-duty clamp to hold a chop saw to your saw stand. You don't really need a heavy-duty clamp to hold a cut-off stop to the fence. In fact, you don't need a heavy-duty clamp for lots of shop jobs. That's the attraction of Bessey's Mighty Mini series. They are less robust than the standard TG-series clamps (They can still apply 330 lbs. of clamping pressure!), but they also weigh less and are easier to slip into a tight spot. Throat measures 2-3/8". Imported.

Part #	Description	Price
MM-2004	Mighty Mini 4" Clamp	$10.08
MM-2006	Mighty Mini 6" Clamp	$12.36

E

Bessey Solid-Surface Seaming Tool E

The BESSEY® solid surface seaming tool's twin vacuum cups secure the clamp to any smooth hard surface like polished granite, marble, Corian® and other man made non-porous countertop materials. Large diameter Acme type lead screw smoothly pull the work pieces together. A great time saver.
Twin vacuum cups for clamping non-porous, solid surface material such as granite, marble, Corian, plastic, or glass. The levelling toggles ensure smooth surface joint, reduces grinding, sanding, and finishing.

McFeely's

Aluminum Bar Clamps F

Lightweight but incredibly strong

These are some of the most surprising bar clamps we've encountered. They are disconcertingly light in weight, yet apply tremendous clamping pressure. You'll like the nice "feet" on each clamp that help keep the jaws pointed up, unlike some old pipe clamps you've probably used.

Part #	Description	Price
UBC-2400	24" Bar Clamp	$48.79
UBC-3600	36" Bar Clamp	$53.30
UBC-4800	48" Bar Clamp	$57.60
UBC-6000	60" Bar Clamp	$70.66

F

Face-Frame Clamps G

Assemble even the largest face-frames without using expensive extra-long bar clamps! As the clamp screw is advanced, the no-scuff pad locks firmly to oppose a moveable jaw. Heavy-duty injection-molded alum inum provides great strength without weighing down your toolbox. Ideal for jobsite repair or final assembly! The standard clamp accepts material to 13/16" thick. For use with thicker frames, order the accessory "U-Members" listed below.

Part #	Description	Price
UFF-7600	Face-Frame Clamp (1)	$40.94
UFF-7601	U-Member for up to 1-1/16" Material	$16.64

H

Bessey Medium Duty Bar Clamps I

Precision alloy steel serrated steel rails are plated for corrosion protection and work together with high strength alloy cast clamping arms to provide high clamp force. Guaranteed not to slip for consistent clamping pressure. Patented design includes a precision hardened setscrew in the moveable clamping arm that interlocks with the serrated steel rail for consistent no-slip clamping. The fixed jaw and the sliding arm are made of malleable alloy cast iron for powerful 1,000 lbs. rigid clamping force. Fixed jaw is securely fitted under pressure to the clamping rail, eliminating rivets or fastener connections found in other clamps. Powder coating protects the clamping arms against corrosion. Ergonomic soft-grip composite handles are combined with a roll-formed threaded spindle for easy, powerful clamping by hand with reduced physical effort. Optional clamping-force indicator is available for those of you who need to know exactly how much force is being applied to the workpiece; simple green/red gauge ring indicates when 700 lbs. of force has been applied. Plastic protective caps are included for standard pressure pad and anvil surface. The 12" weighs 3.3 lbs., the 18" weighs 4.05 lbs., and the 24" weighs 4.8 lbs. Imported.

CLAMPS

Bessey Clutch-Style Bar Clamps A

From 6" to 36", the Bessey Clutch-Style Bar Clamps produce 600-lb. clamping force and load capacity. The jaws are ductile cast iron with powder coating for corrosion resistance, and the ¾" x ¼" rail is nickel-plated serrated steel. The clamp face is 1-1/8" x 1-5/8". The two-piece clutch plates keep the jaw sturdy and in place. The throat depth is 2-½" for all sizes. A 1" swivel pad on the anvil surface helps to grip uneven surfaces. Both upper and lower pads (replaceable) are non-marring. The 3-½" L handle is wood. Imported.

Part #	Description	Price

BT-IB36	36"	$59.47
BT-IB48	48"	$61.81

Bessey Rotating Handle Trigger Clamp C

The NEW BESSEY rotating trigger clamp is unlike anything else!

This innovative patent-pending clamp allows the handle to rotate 360° around the rail. The ability to optimize the handle position for clamping (or spreading) improves both clamping ergonomics and tool versatility by allowing one to position the handle optimally for each job. Additionally, one can clamp several BT-EHKL clamps side-by-side in a confined space and rotate the handle 180° out of the way to allow room for the next clamp.

- **Versatile rotating handle** - The patent-pending mechanism allows the adjustable handle to rotate 360° around the rail to optimize ergonomics and versatility.
- **Clamping in tight spaces** - The adjustable handle allows clamping of several clamps side by side in a confined space.
- **Large clamping surface** - Clamping force is distributed evenly. Work is protected by the soft touch removable pads.
- **Ergonomic composite handle** -Ergonomically shaped composite handle with trigger makes it easy to achieve maximum clamping force with enhanced comfort.

SKU	Name	Price
BT-EHKL-06	Bessey Rotating Handle Trigger Clamp 6 inch	$27.86
BT-EHKL-12	Bessey Rotating Handle Trigger Clamp 12 inch	$29.21
BT-EHKL-18	Bessey Rotating Handle Trigger Clamp 18 inch	$31.41
BT-EHKL-24	Bessey Rotating Handle Trigger Clamp - 24 inch	$34.66

Bessey Gearklamp Bar Clamp D

Intelligent design, The first clamp of it's kind easily reaches places that were once difficult or impossible to access. Patented mechanism separates spindle from handle for greater clearance. The unique mechanism allows the handle to be offset from the point of contact. This creates the possibility of reaching "into" confined spaces to achieve clamping solutions. Fully enclosed mechanism is protected from dust and debris.

- High-quality two-component plastic handle positioned around the rail
- Fast action, secure clamping force up to 450 lbs
- Quick-release shift button to quickly adjust sliding bar
- Fully enclosed gear train to keep dust and debris out
- Ideal for clamping in cramped spaces

Bessey Edge Clamp E

Onehanded edge clamp

Unique twin spindle: The outer spindle acts on the clamping jaws, and the inner spindle applies pressure to the front edge. The impact-resistant plastic handle for one–handed use means that any task or application is well within your grasp.
Large jaws: Non–slip, gentle clamping. Max. opening distance: 55 mm. The large jaws with integrated colourless soft plastic caps increase the versatility of the clamp.
Swivel pressure plate: The large pressure plate will swivel to apply pressure wherever it is required.
Light aluminium housing: Lightweight yet highly effective. The statically–optimised aluminium housing creates a corrosion–resistant body for the convenient, one–handed edge clamp EKT.

BT-EKT55	NEW	Bessey Edge Clamp	$67.10

Clamping Squares F

The Milescraft ClampSquares is the ultimate solution when you need to square up corners in your woodworking assembly and gluing applications. These ClampSquares are durable and lightweight, making them easy to use. Unlike metal squares, these clamp squares will not mar your workpieces. 90° angles are essential for woodworking, which makes these the perfect accessory. ClampSquares can be used on both inside and outside edges. The squares are ideal for project construction, from assembling boxes to building shelving.

8☒ x 8☒ Durable Body - Set of two
4☒ x 4☒ Durable Body - Set of two

SquareClampKit makes squaring your projects a breeze and provides an extra set of "hands" to hold them together while you drive fasteners. The square clamps are equipped with TPE pads to prevent the workpiece from marring. This corner clamping jig is ideal for project construction, from building cabinets to assembling furniture.

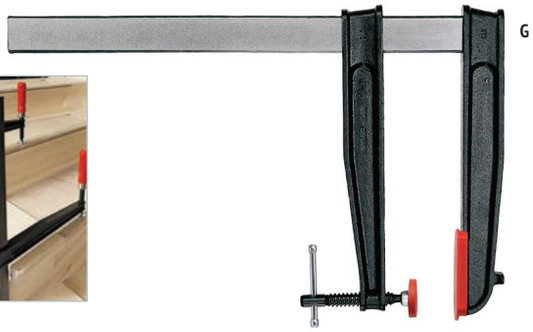

SKU	Name	Price
MCR-4010	4 in. Clamp Squares - set of two	$8.99
MCR-4011	8 in. ClampSquares	$14.99
MCR-4012	SquareClampKit	$24.99

Bessey Sliding Arm Deep Reach Bar Clamps G

If you've ever needed to clamp a workpiece in its center, you'll appreciate the extended reach of these bar clamps. The bars are malleable cast iron with 1-¼" swivel pads. The bars themselves are 1-49/64" thick and 15/32" wide. The clamp-pad face is 1-7/16" x 1-7/8". The forged-steel handle is 3-3/8" long. One clamp has a 12" throat depth, while the other has a 20" throat depth. The nominal clamping pressure is 1,550 lbs. for the 12" and 990 lbs. for the 20". Imported.

Part #	Description	Price
BT-2412	Deep-Reach Bar Clamp 24" x 12"	$167.08
BT-2420	Deep-Reach Bar Clamp 24" x 20"	$258.14

Bessey Kliklamp H

The Kliklamp is an automatic one-handed bar clamp. Made with a lightweight magnesium clamping arms, the Kliklamp has an ergonomically shaped ratcheting, clamping lever. Ratchet action is vibration and slip proof. Produces 260 lbs. of clamping force. Weighs 1 lb. Imported.

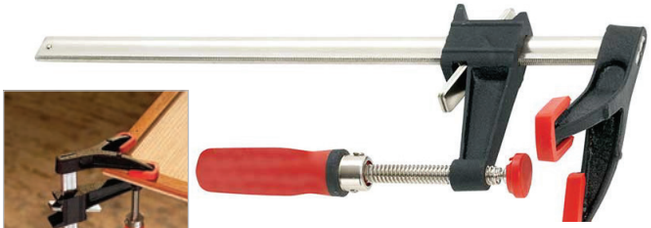

Part #	Description	Weight	Price
BT-3004	3" x 4"	.7 lb	$30.36
BT-3008	3" x 8"	.8 lb	$30.98
BT-3012	3" x 12"	1.0 lb	$33.26
BT-3016	3" x 16"	1.0 lb	$34.71

Bessey Double-Headed Clutch Style Bar Clamp I

The Double-Headed Clutch-Style Bar Clamp has many of the same great features as the single clamps listed at the right: The two-piece clutch plates that keep the jaws sturdy and in place and the non-marring, replaceable pads. The ductile, cast iron bar thickness 1-¼" x 1-5/8". The rail is 55/64" x 15/64" nickel-plated, serrated steel. These clamps also have a double-jaw clamp for corner glue-ups, where pressure needs to be dispersed for delicate work. In 12" and 24" lengths, the throat for these two is 3-½" L. Both have 400-lbs. clamping force. Imported.

Part #	Description	Price
BT-BC12	Clutch Bar Clamp Double 12"	$20.59
BT-BC24	Clutch Bar Clamp Double 24"	$23.08

CLAMPS

Hardwood Cam Clamp by Dubuque Clamps A

Made with the highest quality materials and workmanship, Cam Clamps provide quick, non-marring, even clamping pressure. Some call these "rabbit-head clamps" due to their resemblance of a rabbit's profile, yet these clamps provide fast, non-marring performance.

Features:

- Hardwood maple jaws
- Zinc plated steel bars
- Cork Faces on the jaws protect against marring
- Quick adjustment
- Light weight

Specifications:

- Jaw Length = 4-½ in.
- Clamp Capacity = 8 in.

Made in USA.

Part #	Description	Price
CAM-CLAMP-4408	4-½" x 8" in Hardwood Cam Clamp	$26.68
CAM-CLAMP-4416	4-½" x 16" in Hardwood Cam Clamp	$35.57
CAM-CLAMP-4424	4-½" x 24" in Hardwood Cam Clamp	$36.70
CAM-CLAMP-6008	6" x 8" in Hardwood Cam Clamp	$27.61
CAM-CLAMP-8408	8-½" x 8" in Hardwood Cam Clamp	$29.08

Miro-Moose Wooden Handscrew Clamp by Dubuque B

American Made High Quality Wooden Handscrew Clamps apply even pressure across the entire clamping surface!

Features:

- Hardwood Maple Jaws
- High quality manufacturing with threads machined to close tolerances and plated for smooth operation.
- Pivots and Spindles are zinc plated. Pivots also receive a chromatic coating for extra durability and smooth action
- ACME Threads

Specifications:

- Jaw Length = 10 in.
- Open Capacity = 7 in.
- Working Reach = 5 in.
- Spindle Diameter = 7/16 in.

Made in USA

Schroder Screw-Extractor Set H

When you have a screw that has the head torn off, all you can do is pull out your handy-dandy screw-extractor set! Drill a hole with the recommended twist drill into the stud's center, and turn the extractor into the hole counterclockwise until the stud is removed.
The set includes sizes #1, #2, #3, #4 and #5. Precision machined from high-quality chrome vanadium steel and expertly heat-treated for longer durability. Comes with a square shank in a sturdy case. Imported.

Part #	Description	Price
BSM-4615	5-Piece Screw-Extractor Set	$32.12

5 Piece Broken Screw - Extractor Set I

When you have a screw that the head broke off in a project? These heavy-duty "Spring Steel" are designed to drill along the side of the screw so it can be removed with minimal damage to surrounding wood. Once the screws are removed, the hole can be plugged using a dowel the size of the hole and a screw reinserted into the same place.
The broken screw can be replaced with the same-sized screw
A longer or thicker screw may be needed, especially if the structural strength is essential, often the hole must be epoxied or plugged and redrilled
5-piece Screw Extractor Set, 5/32, 3/16, 7/32, ¼, and 5/16 in.

Part #		Description	Price
213505		5 Piece Broken Screw Extractor Set	$67.97
213506	NEW	5 Piece Broken Screw - Long Extractor Set	$67.97

HAND TOOLS

A

Economical Push-Style Screwdriver A

Uses 1/4" ball detent bits!

Cordless screwdrivers have replaced mainly manual screwdrivers, yet Yankee screwdrivers have remained popular with woodworkers. The biggest problem has always been finding driver bits for them. This automatic screwdriver is an economical alternative to the high-priced, genuine Yankee driver. It accepts standard ¼" hex shank and ball detent driver bits without an adapter. It pulls back on the quick chuck's sleeve to insert or remove a bit. It measures 17" overall. Includes a #1 and #2 Phillips bit, #6-8 and #8-10 slotted bits, and a 1/16" drill bit.

Part #	Description	Price

Kreg Quick-Flip Drill/Driver C

The Kreg Quick-Flip makes it possible to use Kreg Screws for a variety of strong, simple joints – all with one single tool.

Drill a pilot hole and counterbore with one side, then drive a Kreg Screw with the #2 square-drive bit on the other side. With this dual-action tool, you can quickly make joints using Kreg Screws in many different applications.

Kreg Screws are perfect for pocket-hole joints, but their strength and high-quality engineering make them ideal for other uses, too. Use the Quick-Flip with Kreg Screws to quickly face-join corners, attach false fronts to drawers, and much more.

The Quick-Flip features a double-ended insert in a quick-release housing. On one end, a drill bit is sized to drill a perfect pilot hole for a Kreg Screw, plus a cutter that drills a flat-bottomed counterbore that the screw head fits into. Then flip the insert around to expose the other end: a #2 square-drive bit specially designed for use with Kreg Screws.

SKU	Name	Price
KR-FLIP	Kreg Quick-Flip Drill/Driver	$14.99

C

Kreg 90° Pocket-Hole Driver D

Turn any drill into a 90 driver with the Kreg 90 degree Pocket-Hole Driver.

This compact drill attachment allows you to drive screws in places you couldn't normally reach with your drill. The included 3 in. square-drive bit chucks in securely, and has a magnetic tip that locks into the head of a pocket-hole screw so you can drive screws with confidence, no matter where they are.

This attachment works with all hex shank bits, making it great for more than just pocket-hole screws. With an ergonomic design, the 90 degree Pocket-Hole Driver is easy to hold in place with one hand while you control the drill with the other. It's also impact-rated for use with an impact driver. Whenever you need to drive screws in tight spaces, count on the 90 Degree Pocket-Hole Driver to get the job done.

DIY

A

Gorilla Gripper® A

Easily grip, lift, and carry sheet goods!

This newer Model-GP Gorilla Gripper grabs panels from ZERO to ¾ of an inch thick. Just like the Gorilla Gripper Contractor Model, the Model GP makes light work of grabbing panels and sheet goods. Now, the newer GP-model can grab panels down to zero thickness. Use it for ¼" plywood sheet metal, or thicker panels like ¾" plywood. Use it to carry one or more plywood panels from 0" to ¾" total thickness. Pull sheet goods off a rack with ease. Grab sharp edged sheet metal or glass panels safely. No cut hands! No awkward bending or twisting. Improves jobsite safety and reduces worksite injuries. The Gorilla Gripper's soft pads allow for transport of furniture-grade panels without marring the surface.

Part #	Description	Price
GGR-44009	Zero Grip Gorilla Gripper	$49.95

B

FastCap Crown Clips B

Hang crown molding without a helper!

Now you can install crown molding without the need for an army of helpers. FastCap's Crown Clips are lightly fastened to the wall using drywall screws, with the hook positioned slightly lower than the installed bottom edge of the molding. The crown molding is then laid in the hook and supported while the molding is nailed. The clip is removed before the molding is nailed by simply sliding it to the right about ¾" and popping it over the screw head. Crown Clips are completely reusable. Hangers are approximately 3-½" H x 1-¼" W x 9/16" D deep. Hangers may be located up to 48" apart but best if one hanger is used for every 36" of length. Imported.

Part #	Description	Price
FSC-3026-4	FastCap Crown Clips, 4 Pk	$7.30

Leg-Up C

Did you ever need a third arm?

Every time you try to cut sheet goods on your table saw, you need help to get the panel into position. Now with the Leg-Up, you've got it all by yourself. The Leg-Up attaches to the edge of your table saw or fence rail in minutes. It uses leverage, not your muscles, to lift the load. Simply slide the edge of the panel into the hook groove and flip it up horizontally with ease. Made of powder-coated and black-oxide-coated steel, the Leg-Up resists corrosion. Leg-Up attaches to almost any table saw using the included bolts. An additional fitting is supplied, giving you the option to mount it to the vertical edge of the table saw or the horizontal edge of the fence rail. Few table saws are without a lip where you can mount the Leg-Up. It weighs 2.5 lbs. and measures 29-½" H x 2" D x 1-½" W.

Part #	Description	Price
GGR-0008	Leg-Up Panel Lift	$39.95

C

D

Lighted Pickup Flex Tool D

See what you're missing

This 24" lighted, mechanical pickup tool can grab anything, provided it's within 52 cm (about 2") or less. Features a strong retrieval claw, Flexi-Shaft™ with corrosion-resistant, black finish, powerful LED light and comfortable hand controls. The only thing that would make this tool better is if it were robotically fused onto your hand. Three LR41 batteries included. Imported.

Part #	Description	Price
GT-7039	Lighted Pickup Flex Tool	$15.89

Pricing is subject to change at any time due to market fluctuations.

Jab Saw E

This may be the last drywall saw you ever need to buy

The Klein Jab Saw has a fixed blade in an ergonomically designed handle with a thumb groove to help on the "push." The triple-ground teeth cut on both the push and pull, so you get done twice as fast. The hardened carbon steel blade has a beveled, pointed tip for "punching" through and scoring drywall. The end of the handle is blunt to help the palm punch through the drywall to make a starting hole. The saw is 12" L overall, including the handle, and features a 6" L blade. Imported.

Part #	Description	Price
KLT-9026	Jab Saw	$14.97

E

Kreg 3000 Panel Carrier F

Confidently carry full-size sheets with the Kreg Panel Carrier. It makes the tough task of carrying plywood and large panels as easy as clamp, lift, and go! Now you can move 4x8 sheets by yourself without added strain or risk of damaging the material. Just slide the large pads over the panel and lift up on the handle to clamp and automatically adjust to the material thickness, up to ¾". The pads are covered with Kreg GripMaxx™ to ensure a strong, secure hold without damage, dents, or marks – even on fragile plywood veneers.

Klein Tools® Mini Screwdrivers H

Precision tips for a perfect fit

These mini screwdrivers are exactly what you need for precision work! Screwdrivers with tips sized appropriately for the small fasteners used in today's world of miniaturization are prone to bending or stripping. Set includes four Tip-Ident® color coded cushion grip screwdrivers: 5-¾" L (4-¾ L for 1/16" slotted driver) with #0 Phillips tip; 1/16", 3/32", and 1/8" slotted tip.

Part #	Description	Price
KLT-5484	Klein 4-Piece Mini Screwdriver Set	$24.99

Klein Tools® Six-in-One Tapping Tool I

Often internal threads seem to need a touch-up so that a machine screw will drive properly. Klein's nifty six-in-one tapping tool is just the thing to restore or even enlarge damaged threads quickly and easily. Each end of the reversible shank has three graduated tap sizes. The large cushion-grip handle allows for plenty of leverage, making thread restoration both convenient and easy! Hardened steel 7-¾" L tool has 6-32, 8-32, 10-32, 10-24, 12-24, and ¼-20 taps.

Part #	Description	Price
KLT-2620	Six-in-One Tapping Tool	$29.99

PoziDrive Screwdriver J

Designed for most Euro hardware

Most Euro-style hardware is designed for installation using a PoziDrive screwdriver, which looks very much like the familiar Phillips recess. While a Phillips bit will work, using a genuine PoziDrive bit will greatly improve fastener performance. Phillips and PoziDrive bits both have four "wings," but PoziDrive "wings" are parallel and resist cam-out much like our Square Drive. The "wings" of a Phillips bit are tapered and tend to slip. PoziDrive screws can be easily identified by the four extra hash marks between the "cross." Shaft is 4" L, with 8" overall length. Imported.

Part #	Description	Price
MP-SD02	#2 PoziDrive Screwdriver	$18.51

MegaPro Mini Double-Ended Driver K

Everybody's got the standard screwdrivers, but when you really need one for working on your computer, electronics or datacom only a few of you have what you need. This handy pocket screwdriver has contoured bits that can reach a depth of 15 mm (9/16") with tips that are small enough to be effective. You get a double-ended (0 and 00) Phillips and double-ended slotted (1.5 and 2.0 flat). Caps fit snugly on either end to protect the bits and you.

Part #	Description	Price
MEG09	Mini Double-Ended Screwdriver	$4.99

Drive Screws on an Angle L

Ball driver fits Square Drive screws!

These drivers are a giant step sideways for Square Drive screws. A ball-shaped tip allows you to drive screws up to 25° off of axis. The tip doesn't "stick-fit" like our standard drivers, but it isn't supposed to. Available individually or as a set of four. **Note:** The design reduces the tip strength – not designed for heavy-duty use.

Part #	Bit Size	Shaft Length	Overall	Price

HAND SCREWDRIVERS

A

Large Tool Magnetizer/Demagnetizer A

Magnetizer/Demagnetizer: leave the magnetizer on the tool for extra magnetic strength. To demagnetize, pass the tool through one of the exterior channels.

- Easy to magnetize small and medium-sized tools
- Good for use at home, garage, or workshop
- Great for mechanics and do-it-yourselfers

2 in. x 2 in. x 1 in.

Part #	Description	Price
MM-7524	Magnetizer/Demagnetizer	$3.77

B

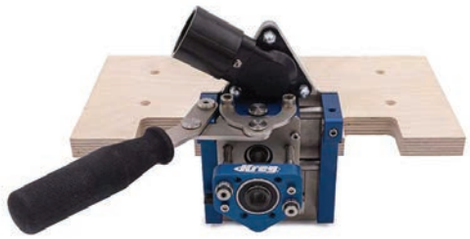

Klein Magnetizer / Demagnetizer B

Limited Quantities - Get them while supplies last!

Dropping screws on the job can kill your productivity. Always have a magnetic screwdriver handy with Klein Tools' Mag2 Magnetizer/Demagnetizer. Quickly and easily magnetize your screwdrivers and bits to hold your fasteners on the tip of your screwdriver and get the job done fast. This compact tool is great when you need a magnetized screwdriver or bit. Powerful rare-earth magnets provide a fast, robust, and long-lasting charge. Easily attach it to your tool bag with the included stainless steel key ring. Once you have one, you'll wonder what you did without it.

Part #	Description	Price
KL-32446	Klein Magnetizer / Demagnetizer	$9.97

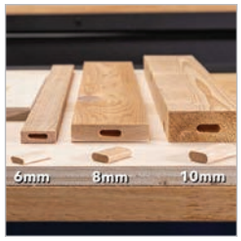

KREG MORTISEMATE

C

Kreg MortiseMate C

New

The Kreg® MortiseMate™ Loose Tenon Jig will change how you think about traditional wood joinery. This innovative tool allows you to easily create loose tenon joints, combining the precision of a router with the simplicity of a drill. Featuring an auto-indexing step-down mechanism, micro-adjustment screws, and an integrated mini-work surface, the MortiseMate makes it easy to create professional-quality hidden joints with just a drill — no router needed.

The MortiseMate's exclusive auto-indexing step-down mechanism enables precise mortise cutting with a drill, eliminating the need for complex setups. Each pass automatically lowers the cutter by 1/16", ensuring flawless, accurate joints every time.

SKU		Name	Price

Magnetic Nut Runners D

Drive hex head self-drilling screws easily!

Hex head self-drilling screws have made life easier for heating and ventilation contractors and sheet metal workers in the same way that Square Drive screws have improved woodworking. These nut runners use a magnet to hold the screw in position while starting it into the sheet metal. Available in the standard ¼" ball detent style shank for use in quick change adapters, or directly in your drill chuck. All are 1-¾" L.

Part #	Description	Price
NR-0250	¼" Hex Magnetic Nut Runner	$3.49
NR-0312	5/16" Hex Magnetic Nut Runner	$3.69
NR-0375	3/8" Hex Magnetic Nut Runner	$4.09
Set		
NR-3000	Set of three (¼, 5/16, 3/8)	$11.25

Klein Tools® Nut Drivers - Magnetic or Non-Magnetic E

Designed for use with hex-head screws

Most often used with self-tapping, "indented hex head" screws, these nut drivers have 3" L hollow shafts and 6-¾" OAL so that working with nuts on long bolts is easy as well. Superior Klein quality with the patented Tip-Ident® cushioned grips. All but the 3/16" size have hollow shafts.

Part #	Description	Price
KLT-M631	7pc Magnetic Nut Driver 3/16" to ½"	$74.99
KLT-0631	7pc Non-Magnetic Nut Driver 3/16" to ½"	$59.99

Impactech Nutsetters F

Magnetic Nut Setters are now available with the IMPACTECH technology for use in today's high impact power tools. Using a patented spiral torsion zone on the shaft of the nut driver, significant impact and twisting motion is absorbed, resulting in longer lasting bit life. Made from S2 steel. Imported.

Part #	Description	Price
HMN-0416	¼" X 2-9/16" Impactech Magnetic Nutsetter	$5.11
HMN-0516	5/16" X 2-9/16" Impactech Magnetic Nutsetter	$5.69
HMN-0616	3/8" X 2-9/16" Impactech Magnetic Nutsetter	$6.14

HMN-0816	½" X 2-9/16" Impactech Magnetic Nutsetter	$7.94

MAGNETIC BIT HOLDERS

A

B

C

E

¼" Hex to ¼" Square

¼" Hex to 3/8" Square

Mag Bit Holder A

A magnetic insert holds screws to the bit magnetically; a wire ring in the holder grips 1" L wire-detent-style bits firmly enough that you may need to use a pair of pliers to remove them. Hex shank fits Jacobs®-style three-jaw drill chucks, most power screwdrivers, and quick-change chuck adapters. Use only with 1" L insert-style bits. Ball detent bits will get stuck. Imported.

Part #	Description	Price
MH-2410	Mag Bit Holder 2-1/8"	$5.29

Mag Bit Holder B

Screw lock for easy bit removal

You are not alone if you have trouble removing the insert bit from your magnetic bit holders! This bit holder uses a threaded collar that tightens down on a small O-ring to lock the wire detent bit in position. Do not use with ball detent bits. Imported.

Part #	Description	Price
MH-2420	Screw-Lock-Style Mag Bit Holder	$6.86

Drywall Dimplers C

Set drywall screws at the perfect depth

It's almost impossible to set drywall screws at a depth that just dimples the paper without tearing it. These innovative dimplers do just that. The nosepiece contacts the drywall, setting the screw at exactly the required depth as it releases from the bit. Available in 1" L wire detent style or 2" L ball detent style for use with cordless screwdrivers. Both styles have ¼" hex shanks. Driver bits are non-replaceable.

Part #	Description	Bit Length	Bit Size	Price
DS-0210	Square Drive Dimpler	1 in.	#2	$3.71
DS-0220		2 in.	#2	$5.11
DP-0210		1 in.	#2	$3.69
DP-0220		2 in.	#2	$5.09

FastCap® Tip Mag D

Are you tired of having the screw fall off the tip of your bits or screwdriver just as you are applying pressure? Square Drive screws go a long way toward ending this problem, but the FastCap Tip Mag may eliminate it altogether! This handy tool can be applied to any screwdriver or even the 2" to 6" power-bit drivers you put into your electric power tool. Fits hex shape and round bits. It's easily removable so you can use it on multiple bits in your toolbox. And the magnet is so powerful, you can pick up dozens of screws or even the weight of a full-sized machinist square. You'll never have another screw fall off the tip of your screw driver with this tool. The opening is 0.26" I.D. Imported.

Part #	Description	Price
FSC-6046	Tip Mag	$14.64

Socket Adapters E

Use socket wrenches on your drill!

Spin down a loose nut with your electric drill or drive hex-head machine screws without investing in a set of "nut runners." Lock one of these ¼" hex shank adapters into your drill chuck, Make it Snappy™ quick-change chuck, cordless screwdriver or any other tool that accepts a standard ¼" ball detent driver. Then pop a ¼" or 3/8" socket on the end, and you're in business. Obviously, not for changing lug-nuts, but for snugging up nuts or machine screws prior to final tightening with a wrench that can't be beat. Sockets not included. Imported.

Part #	Description	Price
HA-2525	¼" Hex to ¼" Square	$1.86
HA-2537	¼" Hex to 3/8" Square	$4.14

Pricing is subject to change at any time due to market fluctuations.

McFeely's

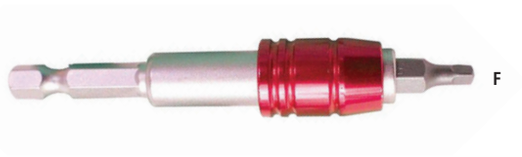

MAGNETIC BIT HOLDERS

FastCap® TaperLock Bit Holder F

No more stuck bits

Made from durable chrome vanadium, FastCap's® TaperLock Bit Holder accepts both wire detent and power-drive bits and holds them snugly in place until you release them. It prevents bits from falling out of the recess because the bit holder wasn't strong enough. A simple one-hand operation allows you to insert the bit in the magnetic holder while the collar locks it in place. To remove, just slide the collar away from the drill and pull the insert bit out. No more accidental release by driving too deep and bottoming out the bit holder on the work surface. Imported.

Part #	Description	Price
FSC-9007	TaperLock Bit Holder	$14.64

F

Power Socket Adapters G

Use hex bits with your socket wrench

When you really need to put some torque on a screw, or you need to work in tight quarters, these can be a lifesaver. Just pop the adapter onto your ¼" or 3/8" drive ratchet and slip in a 1" long hex power bit. (Don't use ball detent bits in this. They'll be stuck forever!) Now you can choose either magnetic or non-magnetic! Please note that the magnetic holders are longer to accommodate the magnet. Approximate lengths are given below. Made in USA.

Part #	Description	Price
DA-0250	¼" Non-Mag Adapter x 7/8"	$4.95
DA-2250	¼" Magnetic Adapter x 2-¼"	$12.95
DA-0375	3/8" Non-Mag Adapter x 1-¼"	$8.35
DA-2375	3/8" Magnetic Adapter x 2-5/8"	$14.90

G

Sleeved Magnetic Bit Holder H

If you drive a lot of 2" and longer screws, this is going to be a lifesaver. You see, long screws have a habit of wobbling a bit until they are started in the wood. Usually you just guide the screw with your free hand, but that isn't always practical, and it can wear the hide right off your fingers if you aren't careful. This ingenious magnetic bit holder has an extra sliding sleeve around it. When you drive a screw, simply extend the sleeve to keep the screw from wobbling. As the screw advances, the sleeve automatically slides back up the bit holder's shaft so it is perfectly positioned for the next screw. Imported.

Part #	Description	Price
VSG-0001	Sleeved Magnetic Bit Holder	$8.34

H

Make-it-Snappy® Quick-Change Chuck I

How often have you wished for a second driver/drill when you were assembling a project? Instead of investing several hundred dollars in a new driver/drill, add this quick-change chuck to your toolbox. It lets you snap in hex-shank driver bits and drill bits without pulling back on the collar, then remove them by simply retracting the collar and pulling out the ball detent bit! Chuck shank is 1" L for use in all 3/8" capacity Jacobs® chucks**.Note:** Driver bit is not included.

Part #	Description	Price
MS-0011	Make-it-Snappy® Quick-Change Chuck	$16.58

I

Make-it-Snappy® Twist Drill Set J

This set contains seven standard point drill bits, in sizes: 1/8", 7/64, 5/32", 3/16", 7/32", ¼", and 3/8 with ¼ Hex Power Bit Shanks. All contained in a canvas pouch with a belt clip plus one hex shank socket wrench.

Part #	Description	Price
MS-8007	7-Piece Make-It-Snappy® Twist Drill	$44.09

J

BIT SETS

A

Make-it-Snappy® 25-Piece Premium Drilling System A

The premium Make-it-Snappy® drilling system includes: **7** hex-shank bit adapters with standard point drill bits: 1/16", 3/32", 1/8", 5/32," 3/16," 7/32," and ¼"; **5** countersink bits w/ 3/8" countersink: 5/64" (#4), 3/32" (#6), 7/64" (#8), 1/8" (#10) and 9/64" (#12); **6** ¼" hex x 2" driver bits: #1, #2 and #3 Phillips, #1, #2 and #3 Square Drive; **2** countersink stops (3/8" and ½"); **2** Allen wrenches; **1** chuck adapter (MS-0011 – see page 68); **1** hex socket adapter; **1** nylon pouch with pocket and a hook-and-loop closure tab. The pouch securely holds each component in elastic bands. The Allen wrenches, needed to tighten the drill bits in the adapters, and countersink depth stops are stored in the outside pocket. Nylon pouch can be attached to your belt or hung on a wall hook.

Make-it-Snappy® Deluxe Countersink Set C

Correct countersink will always be at your side

This premium drilling kit includes a Make-it-Snappy® chuck adapter, a 3/8" plug cutter, a 5/64" countersink, a 3/32" countersink, a 7/64" countersink, a 1/8" countersink, and #2 Phillips and #2 Square Drive power bit all contained in a nylon pouch. The pouch securely holds each component in elastic bands. The Allen wrenches needed to tighten the drill bits in the adapters and depth setting stop collar are housed in similar elastic bands on the outside of the nylon pouch. The convenient bit set can be attached to your belt with a spring-loaded clip. Pouch is closed with a hook-and-loop tab.

Part #	Description	Price
MS-8010	Deluxe Countersink Set	$62.99

D

Belt Pack Bit Sets D

30 of the most used driver bits, or 30 hard-to-find security screw bits

For some reason, the world has yet to standardize on Square Drive fasteners. That means you are likely to run into several different "semi-obscure" recess types if you do any repair work at all. Factor in security screws, and the odds are stacked against having the correct driver bit on hand. Put the odds in your favor and carry one of these Driver Bit Belt Packs with you. Each pack contains 30 different driver bits, a magnetic bit holder for 1" long driver bits, and a ¼" drive adapter that allows you to use the driver bits on a socket wrench. Bits are stored, ready for use, in a durable plastic case complete with belt clip, so you can always be ready (in case MacGyver isn't around). Imported.

Part #	Description	Price

Adjustable Drill Guide A

Need to drill at an odd angle?

Simply slip this drill guide's 3/8" shaft into your electric drill, set the angle anywhere from 45° to 90°, and be confident that the hole you drill is at the angle you chose. The drill guide is made of tough reinforced fiberglass. V-guides on the base allow you to accurately center your hole even on round stock. Reverse the anchor pins in the base to convert to a 3" capacity, self-centering edge drilling guide. Includes a 3/8" Jacobs® chuck. Imported.

Part #	Description	Price
DG-3637	Adjustable Drill Guide	$47.83

Milescraft DrillMate Drill Guide B

You can't take a drill press everywhere, but you can take a Milescraft® DrillMate™. This portable drill guide makes drilling precise holes at multiple angles quick and easy. The DrillMate™ saves time and eliminates frustration when drilling multiple holes in all types and shapes of stock.

SKU		Name	Price
MCR-1318	NEW	Milescraft DrillMate Drill Guide	$39.99

Fuller Straight Plug Cutters C

Make plugs that will almost exactly match the grain pattern of the wood surrounding the countersunk hole. Designed for drill press use. **Note:** A ½" cutters and smaller run well at about 1,000 to 1,200 rpm; run larger cutters at 600 to 800 rpm.

PC04-1000	1"	¾"	½"	$49.90

Bosch Hammer Drill Bits D

Did you want to put a railing around your concrete porch but got tired of trying to drill anchor holes with your regular drill? Bosch hammer drill bits can drill through concrete, stone or masonry. The magic is in the carbide tip. It can withstand the hammering action of a hammer drill, and that hammering action helps to pulverize the concrete and make the hole. The carbide tip has been brazed at a low voltage and at very high temperatures to keep the cutting edge from breaking, even with the heat of deep drilling. Special deep flutes help remove the concrete dust for fast drilling. Bits will fit any competitive, appropriately sized, three-jaw-chuck hammer drill. Imported.

Part #	Description	Qty/Pk	Bit Diameter	Usable Length	Overall Length	Price
RBD-0405	Drill Bit	5	3/16 in.	4"	6 in.	$24.09
RBD-0605		5	¼ in.	4"	6 in.	$25.09

RBD-1605		5	½ in.	4"	6 in.	$34.02
RBD-2005		5	5/8 in.	4"	6 in.	$39.27

Make-it-Snappy® Step Drills E

The problem with one piece bits is that they are easily broken if dropped on a hard floor. This Connecting Screw Step Drill is designed so that you can easily replace the brad point pilot drill when it is damaged or worn out. Shank is ¼" hex, and fits most quick change chucks as a bonus! **Note:** For best results and longest life, clear the chips often when drilling. **Add** -R to the part number when ordering replacement drill bits.

Part #	Description	Price
MS-5040	5 x 40 mm Stepped Countersink	$19.83
MS-7050	7 x 50 mm Stepped Countersink	$22.04

General® Drill Bit Size Gauge F

Organize unmarked drill bits fast

Do you have a bunch of unmarked drill bits in the bottom of your tool box? Get them sized and organized with this drill bit gauge. Place the bit in the hole and read the scale from 1/16" to ½". Made from heat-treated steel with stamped markings. Measures 6-½" L x 2-½" W x 1/8" H. Imported.

Pricing is subject to change at any time due to market fluctuations.

McFeely's

Milescraft Orbiter G

The Milescraft Orbiter is genuinely a one-of-a-kind accessory. Its two body halves and handle all independently rotate 360 degrees so you can get into previously unreachable spots in your garage, home, or any other tight spot. With the Orbiter attached, any drilling situation, from the far corner of a drawer to that tiny space at the back of the sink, is quickly completed. Able to fit on any 3/8 In. or larger drill, the Orbiter includes a keyless chuck for fast, easy bit changes. The soft-grip handle is easy on the hand and provides comfort while working.

SKU		Name	Price
MCR-1300	NEW	Orbiter	$36.99

G

Flexible Extension Shafts H

Now drive screws around corners!

These heavy duty drive shafts flex through 90° or more, depending upon the length to help you reach those "inaccessible" screws easily. Unlike other flexible extension shafts, the outer cover of these do not rotate, so you can hold it as needed to direct it into position. You don't need to worry about it grabbing hold of something unexpectedly. Just imagine how nice it would be to snake one of these flexible extensions deep into an appliance and remove a screw without taking half of the machine apart first! Torque capacity of 156 in. lb. is almost twice as much torque as a #10 screw can take! Standard ¼" ball detent drive end fits most quick-change chucks. The mag-bit-holder female ends accept both ¼" ball and wire detent tools and bits. The shaft has a diameter of .42", while the bit holder is 5/8" dia. Imported.

Part #	Description	Price
FBX-0011	11 in. Flexible Extension Shaft	$32.31
FBX-0018	18 in. Flexible Extension Shaft	$59.15
FBX-0024	24 in. Flexible Extension Shaft	$71.78

B

Fuller Countersinks and Stop Collars A

Drill the pilot hole and countersink in one step! Just pick the countersink for the desired plug size, then select the appropriate pilot drill (any point style is fine) to match the screw. Use stop collars to control depth. See **McFeelys.com** for wrenches. **Note: Order drill bits separately.**

Make-it-Snappy® Countersink C

Tired of countersinks that slip on the drill bit after one or two holes? After tightening the setscrew half a dozen times, the drill bit is usually so scarred up that there is no hope of any further adjustment. Make-it-Snappy® Countersink Sets are designed so that the countersink locks onto the hex shank and the drill bit slides through the center. A setscrew allows adjustment of the drill bit for different screw lengths. The bit may be replaced with equal-sized bits of any point design or length.
The countersink set includes five adjustable countersinks from 5/64" x 3/8" countersink to 9/64" x ½" countersink, as listed individually below. Choose from brad or standard point high-speed steel drill bits for replacement bits. **Please note:** The 9/64" x 3/8" countersink is a special purpose tool and is not included in the set; however, a 1/8" hex wrench is included.

Part #	Description	Price
MS-4030	Dual-Flute Countersink Set – Standard Point	$34.64

Dual-flute Countersinks with Standard Point HSS Bits *Individual*

MS-3005	5/64" Dia Standard Point & 3/8" x 82° Countersink	$9.44
MS-3006	3/32" Dia Standard Point & 3/8" x 82° Countersink	$9.44

Make-it-Snappy® Trim-Head Countersink D

Trim head screws are great for installing trim moldings in softwoods but generally require predrilling when used in hardwoods to avoid splitting or, worse yet, stripping of the recess. Standard countersinks either have too large a countersink or too small a pilot bit. The result is an oversized head hole that requires excessive filling or a pilot hole that isn't big enough to clear the screw threads. Our trim-head countersink drills a 1/8" clearance hole and has a ¼" dia. countersink that fits most trim-head screws perfectly. You will need to eyeball the depth on countersinks this small. The use of a stop collar prevents wood chips from clearing, leading to heat buildup, which can prematurely dull the edge on the countersink.

Part #	Description	Price
MS-7010	1/8"-Dia Standard Point Bit & ¼" Countersink	$9.44

Make-it-Snappy® 82° Countersink E

When you need to countersink an existing hole, this is the tool to use. Its 5/8" dia. and 82° angle suits modern screw design perfectly. The single flute design minimizes chatter and the potential for oval holes. Of course, the ball detent shank works perfectly with the Make-it-Snappy® quick-change chuck and other quick-connect tool holders. Made of tool steel.

Part #	Description	Price
MS-3099	Make-it-Snappy 5/8" Countersink	$12.06

Make-it-Snappy Flat Bottom Counterbore Bits F

Drills a pilot hole and counterbore a flat bottomed hole in one step. Perfect for lag screws, lag bolts, washer head screws, T-nuts & more.

COUNTERSINKS/COUNTERBORE

Make-it-Snappy® Tapered Countersink Set A

Perfect for tapered wood screws

This set of countersinks is designed especially for use with tapered wood screws. Drill the propersize hole and sink the head all in one operation. For best results, adjust the drilling depth by adjusting the length of the bit using the supplied Allen wrench. This kit includes 9/64", 11/64" and 13/64" bits with 3/8" countersinks. All fit into the Make-it-Snappy® chuck adapter for fast bit changes.

Part #	Description	Price
MS-4430	Tapered Countersink Set	$40.41

Snappy Premium Rotating Depth Stop B

Limited Quantities - Get them while supplies last!

Precision chrome ball bearings allow the ring to rotate freely when the desired depth is reached. The unique mounting channel and clamping nut ensure consistent depth of cut. The large rotating ring prevents damage to the work piece. Generous radiused cavity reduces chip packing.
Also fits on 3/8⊠, 7/16⊠, and ½⊠ Flat-Bottom Counterbores
Does not fit on Tapered Drill Countersinks, 7×50 Confirmat Countersink, or TCT Countersinks

Part #	Description	Price
MS-3032	Snappy Premium Rotating Depth Stop	$27.29

Installation Socket for Snappy Drill Bit Adapters C

Use the shank socket to protect the drill bit adapter's hex shank when replacing the twist drill.

Part #	Description	Price
MS-42001	Hex Shank	$2.61
MS-42881	Bench-Mount	$10.49

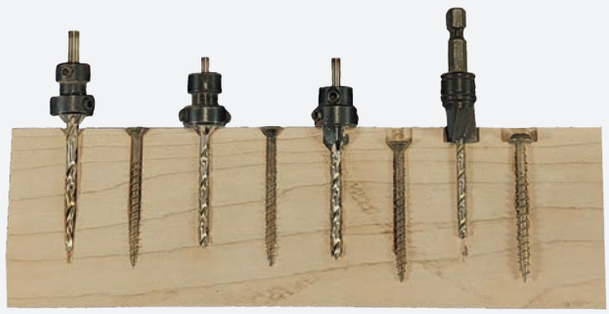

Tech Tip

If you want flat head screws to sit flush with the surface in a workpiece, for hardwoods, countersinks are a must. The pilot hole always comes first. Choosing the correct drill bit for the screw is important. Tapered drill bits are designed to be used with Traditional Screws. Traditional screws are where the shank and the Major Diameter of the threads are the same. Threads near the point will be deeper than the ones at the top of the threads. The tapered drill bits are designed to match those tapered threads. If you use it with a modern-day production screw, as you see below in the image, you will see that only the last few threads will engage the wood. Modern-day production screws the shank is the same all the way down (the minor diameter), and this creates a "Deep Thread." A straight drill bit that matches the shank diameter is the best to use for these screws. You can see in the three variations on the Right that you get major thread engagement from the straight pilot hole. The countersink collar goes on the drill bit to root out a small opening for the flat head screw to sit flush in the hardwood. Or the collar can be set to allow a counterbore so that the head will sit below the surface and leave a space to use a plug to cover the screw head. Flat Bottom Counterbore bits allow for the use of a Washer Head, Pan Head, or Truss Head screw and cover the head with a plug. The countersink and stop collar pieces are interchangeable.

Pricing is subject to change at any time due to market fluctuations.

McFeely's

Fuller High-Speed Steel Standard-Length Bits D

The Standard 118-degree point is effective in metal and wood with shanks of full diameter. **For example,** A ½ in. dia. STD-0500 has a ½ in. dia. shank.

Fuller Drill Bit Kits

Are you always looking for the right sized drill bit?

You'll look no more for the correct drill bit size when you have them organized in a metal carrying case all nicely arranged by size. These are the same quality HSS drill bits that McFeely's® has sold for years. Standard point jobber length and brad point bits are now available in sets. A 15-piece standard set includes bits from 1/16" to ½" in 32nd increments, while a larger 29-piece set includes bits from 1/16" to ½" in 64th increments. The brad point sets contain bits from 5/64" to ½". The smaller brad point set includes 14 pieces in 32nd increments, while the 28-piece set has all the bits by 64th increments, as listed. Standard point drill bits are general purpose for drilling in wood, plastic and metal. Brad point bits provide clean, straight and accurately placed holes in wood, but they can also be used on plastics, nylon, fiber, fiberglass and other man-made materials. **They are not recommended for metals.**

Part #	Description	Price
BRD-5014 B	14-Piece Brad Point Kit	$194.61
STD-5015 C	15-Piece Standard Kit	$103.19
BRD-5028 D	28-Piece Brad Point Kit	$357.87
STD-5029 E	29-Piece Standard Kit	$174.45

Fuller Stainless Steel Straight Plug Cutters F

Strong enough to make plugs from tropical hardwoods

You make furniture from Ipe, Teak, or Pau Lope, and now you've got to hide the screw heads. Most plug cutters don't handle hardwood very well, but here come Fuller stainless steel plug cutters to the rescue! They work the same way as other plug cutters, making your project much easier and faster. The plug is slightly larger than the counterbore diameter for a tight fit. Fuller plug cutters are made from the highest quality stainless steel and heat-treated for strength. They are designed to cut fast and clean, saving time and money, and the recommended drill speed is 1,000 – 1,200 rpm.

Part #	Description	Diameter	Length	Shank	Price

F

Freud® C.T. Forstner Bits G

Stay sharp - cut almost anything

With their super-sharp carbide tips, these bits easily cut through Corian®, Avonite®, and other solid surface materials. They stay sharp longer in hard materials, such as Maple. **They are not recommended** for soft materials like Pine or Poplar, but standard Forstner bits are used. Imported.

Fisch Forstner Speed Grinder H

Simplify your bit grinding process with the Fisch Forstner Speed Grinder

The Fisch Forstner Speed Grinder makes it easy to achieve professional-level sharpness on all your Forstner bits and TCT-hinged boring bits.

- Eliminates the need to regrind Forstner bits by hand
- Use with a drill press
- Regrind drill bits back to professional-level quality
- Adapts to fit most drill presses
- Includes T-nut, bolt, Allen key, and detailed instruction manual

Using this tool will significantly increase the life of your Forstner bits instead of regrinding bits by hand. This is the easiest way for professionals and DIYers to care for their bits.

DRILL BITS

5-Piece Set

CMT Forstner Bits A

Until you try them, you won't believe that a forstner bit can be this inexpensive and still perform this well. CMT sharpens top-quality imported bits in their own Italian factory. That results in a top-quality forstner bit at an affordable price.

Guided by the rim rather than a center spur, forstner bits bore flat-bottomed holes, which may be overlapped or enter at odd angles. Use caution with small bits (3/8" to 5/8"), because they do not have a great deal of space available for chip ejection. Bits over 7/8" have a sawtooth rim for improved performance. Made of high-speed steel, these bits start sharp and stay sharp longer than bits made of ordinary tool steel. The shank is 3/8" dia. and with an overall length is 3-35/64".

Make-it-Snappy® Self-Centering Bit Guides C

Off-center mounting holes? Never again!

Have you ever drilled hinge-screw pilot holes and then discovered that they were off-center when you went to install the screws? These self-centering drill-bit guides prevent that. The nosepiece bevel centers itself in the hardware's countersink and retracts as drilling pressure is applied so that the bit drills a perfectly centered pilot hole. Simply loosen a setscrew to replace the drill bit. Replace the spring by unscrewing the hex-drive shank from the knurled body. All drill guides have ¼" hex shanks for use in quick-change chucks. Shelf pin drill guides fit standard shelf pin drilling jigs. The Euro drawer-slide drill guide has the proper nosepiece to fit the mounting holes on Grass drawer guides, as well as those of other manufacturers.

Make-it-Snappy® Self-Centering Drill Guide Bit Sets D

Have you ever drilled a hole for hinges or drawer slides only to find that they are off center and the screw head didn't seat properly? It happens to the best of us and can be avoided by using a Make-it-Snappy® Self-Centering Drill Guide Bit Set. The five-piece set includes one each: 5/64", 7/64", 9/64", 11/64", and 13/64" centering guides and drill bits. Smaller three-piece set includes one each: 5/64", 7/64", 9/64" centering guides and drill bits. While holding the hinge plate in place, simply press the guide into the hinge-plate mounting hole and push to begin drilling. The spring-loaded guide retracts as pressure is applied and the drill bit advances. Drill bits are replaceable when dull; Simply use the 1/8" Allen wrench to loosen the bit, insert a sharp drill bit and retighten with the Allen wrench. A ¼" hex shank fits into the Make-it-Snappy drill chuck.

MS-5300	3-Piece Self-Centering Drill-Guide Bit Set	33.06

D

Eazypower Hinge-Centering Drill Bit E

Self-Centering Bit Sleeve ensures the pilot hole is drilled precisely in the center of the hinge mounting hole. The beveled self-aligning tip fits into the countersink hole of the hinge or other hardware. Once seated, the drill is perfectly positioned to drill a dead-center pilot hole. ¼ in. Hex shank. Replacement bits that fit in the sleeve can be purchased separately.

4 Piece Set Includes:
3/32 in. Drill for #6 screws - EZP-0664
7/64 in. Drill for #8 screws - EZP-0764
1/8 in. Drill for #10 screws - EZP-0864
9/64 in. Drill for #12 screws - EZP-0964

6 Piece Set Includes these 2 additional bits
5/32 in. Drill for #14 screws - EZP-1064
3/16 in. Drill for #16 screws - EZP-1264

Make-it-Snappy® Hex-Shank Bit Adapters A

Convert drill bits to quick change

Start using the quick-change countersink system, and you'll wish your drill bits were quick change too. With these innovative adapters, they will be. A spring steel collet in each adapter securely grips the bit when the nut is tightened. You can use a range of drill sizes in each adapter. This is important if you use letter, number, or metric series drill bits. Most important, if you happen to break a bit (it can happen), just loosen the collet, insert the good half, and continue working! Sold individually, the adapters do not include the drill bits – purchase separately. Set of seven includes standard point, high-speed steel drill bits sizes: 1/16", 3/32", 1/8", 5/32", 3/16", 7/32" and ¼".

B

Make-it-Snappy® Plug Cutters B

Tapered plugs have an almost invisible fit

How often have you carefully matched the grain of the plugs you cut, only to find that the hole is a fraction oversize so that the glue line makes each plug look like a miniature bulls-eye? Snappy Plug cutters are tapered so that they form a tight fit. For best results, always bore to the maximum depth of the cutter. Once you drill the plug, simply pop it out with a screwdriver, then insert the chamfered end in the hole. Tap it with a hammer. Trim the remaining plug flush to the surface. Recommended drill speed is 400 – 1,000 rpm. A drill press gives best results. Three-piece set includes ¼", 3/8" and ½" plug cutters. All plug cutters have ¼" quick-change shanks, except the ¾" and 1" diameter which have 7/16" hex shanks.

Bosch Concrete-Screw Drill Set & Bits

Fasten without anchors

Concrete screws are used to attach a lot of different things to concrete or block walls: electric outlet and switch boxes, pipe straps, signs, HVAC ducts, and hand railings, to name just a few. You probably have several projects waiting for this in your basement right now. With this screw-anchoring system, you simply drill the hole, then slide on the sleeve and drive the screw. The kit includes one each: 5/32" x 4-½" masonry bit, 3/16" x 4-½" masonry bit, #2 and #3 Phillips drive bit, Allen wrench, drill bit sleeve, drill bit holder, 5/16" hex-head screw setter, ¼" hex-head screw setter and a carrying case. Replacement bit holders, bit sleeves and longer bits for screws of other lengths are available; see below for part numbers. **Note: Bits must be used with a hammer drill.**

Part #	Description	Price
MK-0606 C	9-Piece Masonry Screw Drill Set	$53.49
MH-3071 D	Masonry Screw Drill Bit Sleeve	$12.79
RB-0516 E	5/16" Hex Screw Setter	$8.49
Screw Bits		
CSA-0534	5/32" x 3-½ Concrete Screw Bit	$3.99
CSA-0544	5/32" x 4-½ Concrete Screw Bit	$4.19
CSA-0554	5/32" x 5-½ Concrete Screw Bit	$4.49
CSA-0634	3/16" x 3-½ Concrete Screw	$4.29
CSA-0644	3/16" x 4-½ Concrete Screw Bit	$4.29
CSA-0654	3/16" x 5-½ Concrete Screw Bit	$4.69

5 Piece Broken Screw - Extractor Set F

When you have a screw that the head broke off in a project? These heavy-duty "Spring Steel" are designed to drill along the side of the screw so it can be removed with minimal damage to surrounding wood. Once the screws are removed, the hole can be plugged using a dowel the size of the hole and a screw reinserted into the same place. The broken screw can be replaced with the same-sized screw. A longer or thicker screw may be needed, especially if the structural strength is important; often, the hole must be epoxied or plugged and redrilled. 5-piece Screw Extractor Set, 5/32, 3/16, 7/32, ¼, and 5/16 in.

Part #	Description	Price
213505	5 Piece Set	$67.97
213506	5 Piece Long Set	$59.10

Freud One Quick-Release Mandrel Fits All Sizes Of Freud Hole Saws A

Diablo's new high-performance hole saws deliver faster cutting performance and increased productivity! Unlike anything on the market! Diablo's hole saw system and Snap-Lock mandrel design simplify the attachment process for fast and efficient hole saw mounting. One mandrel fits hole saws of all sizes. These radical new hole saws provide ultimate cutting length to bore deeper holes in a single pass, tool-free plug ejection, and variable tooth design for faster cuts with less vibration to the operator. Drill in wood, aluminum, ferrous metals, and plastics. Freud® Hole Saws can be used in hand-held drills or drill presses. Imported.

Freud Reciprocating Saw Blades B

The Diablo Demon Blades from Freud will last up to 10x longer than competitive standard blades. The Steel Demon blades use a proprietary sintering process to form the teeth under high pressure so they last longer. Specialty blades can cut thin metal, cast iron, stainless and wood. All have the oversized "Demo" body, so they don't bend under the pressure of hard use.
Dual Tooth design features a double tooth configuration with small gullets for faster material removal and extra durability.

POWER TOOL ACCESSORIES

CMT Jig Saw Blades A

Our T-shape blades are the most popular. Virtually all modern jigsaws blades are interchangeable across models. Choose the blade by the material and finish you are looking for. Let the saw do the work. Do not push or pull the saw. Fast cutting blades have fewer teeth and make a good rough cut. Fine cutting blades have more teeth and take longer to make the same cut in wood.

Part #	Length	TPI	Use	Qty/Pk	Price

CMT Reciprocating Saw Blades B

Reciprocating blades share some common measurements with other saw blades. Teeth Per inch has much to do with how aggressive or not a blade is. Fewer teeth per inch generally means faster, rougher cuts—metal cutting is usually done best at slower speeds and with more teeth per inch. The general guideline is that at least three cutting teeth should always be in the material. Longer blades allow more flexibility and are less aggressive than shorter blades. Shorter reciprocating saw blades will be stiffer and more aggressive because of their rigidity.

Multi-Tool C

The OMF160 blade has reinforced teeth with Bi-metal 8% Cobalt. Material: For wood & wood with embedded nails up to 5mm, porous cement, plasterboard, and plastics. Application: CMT has a wide range of applications for this blade. Its medium-width waisted shape gives it optimum cutting quality and speed. Good swarf removal.

Diablo Multi-Tool Blades

Diablo's universal fit bi-metal oscillating blades feature application-specific designs that deliver maximum durability and longer life in nail-embedded wood applications. These high-performance blades feature an ultra-hardened cutting edge, delivering up to 5X longer life than standard blades. The curve contact edge creates a pilot for precise, clean plunge cuts with less vibration. Black I.C.E. (Industrial Cooling Element) keeps the teeth cool and build up free for fast, clean cuts. The blade's universal fit and adapter-free design easily attach most tools, except Starlock tools.

Diablo Sanding

Diablo's premium detail triangle sanding sheets with Hook & Lock™ backing include breakthrough innovations that improve performance, extend sanding life, and increase productivity. Featuring a premium ceramic blend, these discs remove material faster and offer longer sanding life than other sanding discs. Clog-SHIELD™, Diablo's blend of grinding agents, reduces loading, thus maximizing productivity. The superior grain bonding system, ENDURA-BOND™, provides Diablo's sanding discs with longer life and extreme durability.

Metal Cutting Hole Saw A

It is designed to Cut Metals Up to 1000 N / mm2, including Aluminum, Mild Steel, Stainless Steel, Non-ferrous Metals, Sandwich Materials, Cast Iron, Copper, Zinc, and Brass.
Features:

- B-Metal plus 8% Cobalt for Longer Life.
- Fast Lock Attachment - Hole Saw sizes attached without tools with one click
- Precise Hole Enlargement - Attach two hole saws to enlarge an existing hole precisely.
- Hex Shank for Maximum Non-slip Power Transfer

FREUD® CARBIDE-TIPPED SAW BLADES

Freud® Diablo®-Trex® Decking Saw Blades C

Freud® has designed a saw blade specifically for composite (Trex to be exact) decking material. Cutting composite deck boards to length can be frustrating if you don't use these Diablo Trex blades. A modified triple chip grind tooth configuration, coupled with a nonstick Perma-SHIELD® coating, reduces the melting of material. They also use a high-density carbide tooth to maximize the blade life. Blades are all thin kerf for less material removal, causing less drag for lower blade temperatures. Less heat = less gumming = longer life. Imported.

Part #	Diameter	Arbor	Kerf	Teeth	Hook	Price
213138	7-¼ in.	5/8 in.	0.065	44	–3°	$29.97

H

Freud® Thin-Kerf Fine-Finish Crosscut Blade I

This Perma-SHIELD™ coated blade produces smooth crosscuts in hardwoods, softwoods and moldings, even when used on underpowered saws. The coating reduces the drag, which translates into 33% more cutting power. Also, less material is being removed due to the thin kerf of the blade. Performs best when crosscutting ½" to 2-¾". Imported.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Plate	Hook Angle	Price
LU88-12R	12 in.	1 in.	0.094	80	ATB (Alternating Top Bevel)	.071"	15°	$87.51

Freud® Pergo Laminate Flooring Blade A

Freud® designed them at the request of the Pergo® flooring company. This blade is amazing!! It cuts through multiple laminate flooring layers like a hot knife through butter. Please don't take our word for it. Watch the video on our website and see for yourself. Poly Crystaline Diamonds (PCD) make their way quickly through the laminate without getting worn down by the natural abrasiveness of laminate flooring. This blade will last up to 75 times longer than other blades that are purportedly made for laminates. The cut edge is clean and ready to lay down without any clean-up or sanding. Imported.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Plate	Hook Angle	Price
213255	10 in.	5/8 in.	0.065	12	Diamond Grit	.051"	PCD	$82.12

Freud® Anti-Vibe Blades F

LM74 anti-vibe glue-line rip blade

Freud optimized this blade to maximize finish quality in ¾" material by increasing the tooth count slightly. With more teeth cutting and Freud's® anti-vibe technology, this blade provides a ripped edge ready for gluing. Triple chip grind, 12° hook, .126" kerf, .087" plate thickness, 30 teeth. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price
LM74-10R	10 in.	5/8 in.	30	TCG (triple chip grinder)	$78.72

Pricing is subject to change at any time due to market fluctuations.

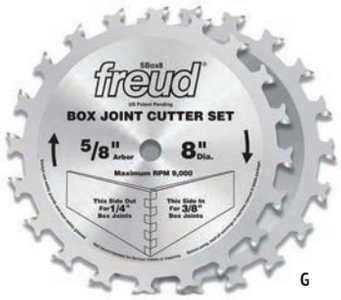

FREUD® CARBIDE-TIPPED SAW BLADES

Freud® Box Joint Cutter Set G

Box joints made simple!

Leave it to Freud® to design a blade set that makes cutting the popular box joint almost trivial. One of the major problems when using a standard blade or dado-set for box joints is the small (or not-so-small, depending upon the blade) nick at the corner of each pin. It is formed by the beveled scoring tooth present on most dado-set outside blades and on all alternate top bevel ground blades. Freud's® Box Joint Cutter Set has perfectly flat top ground teeth, eliminating this aggravation. The set is designed to cut perfect ¼" or 3/8" joints without shims or adjustments. Just reverse the blades to change joint width. Freud even includes complete instructions for construction of a box joint jig. Imported.

Part #	Description	Price
SD-3968	8" Box Joint Cutter Set (5/8" Arbor)	$100.40

G

Freud® Dial-a-Width Dado Set H

Hassle-free joints every time!

Freud's Dial-a-Width Dado Set makes paper-tight joints a reality for everyone, without the hassle of shims! Its patented technology uses a set of special hubs on the outside cutters which, when stacked together or with any of the chippers, allows continuous adjustment of dado width from ¼" to 13/16". Detents on the hubs provide for 0.004" fixed increments, making it easy to return to a previous width. The Dial-a-Width Dado fits both right and left tilt saws, and it's easily converted from the factory supplied right tilt arbor configuration. Each carbide tipped outside blade has 12 scoring and 12 flat-top ground teeth, set at a negative 12° hook for best performance in veneered products. Four 1/8"-wide chippers and one 3/32" wide chipper all have four flat-top ground teeth set at a negative 12° hook. When set up for its widest cut, this dado set consumes approximately 1-1/8" of arbor shaft, without allowance for the arbor nut. Comes with a special arbor nut wrench to assist in reaching into the dado hub. Imported.

Part #	Description	Price
SD-0608	8" Dial-a-Width Dado	$313.64

H

Freud® Super Dado I

Makes dadoes easy!

Freud's Super Dado uses chippers with four teeth each instead of the standard two, so dado bottoms are super smooth. Anti-kickback technology lets you feed at a controlled rate and helps prevent climbing when used on a radial arm saw. An extra-stiff saw plate increases dado accuracy. The Super Dado also includes a 3/32" chipper, making exact setups easy and providing a ¼" to 29/32" range. Dado shims are included. Imagine dadoes so clean and tight it will be a shame to hide them! Imported.

Part #	Description	Price
SD-0508	8" Super Dado (5/8" Arbor)	$248.07

I

Freud® Radial Arm and Miter Saw Blades J

LU91 sliding miter saw blade

Sliding compound miter saws can make glass smooth complex cuts with the right blade. Put on any old blade and a hatchet could do almost as well. Freud uses a negative hook to help keep the material pushed back against the fence and reduce climbing. Ideal for radial arm saws with an alternate top bevel grind, –5° hook, .090" kerf, .071" plate. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price
LU91-10R	10 in.	5/8 in.	60	ATB (Alternating Top Bevel)	$67.72
LU91-12R	12 in.	1 in.	72	ATB (Alternating Top Bevel)	$88.14

J

Freud® Plexiglass/Plastics K

This industrial blade cuts acrylics, polycarbonates and other plastics, leaving a smooth finish without melting the edge. By combining micrograin carbide tips with a specially modified triple chip grind these blades give a clean, smooth cut producing less heat and keeping the cut edge crisp. Cuts best from ¼" to 1-5/8". Imported.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Plate	Hook Angle	Price
LU94-10R	10 in.	5/8 in.	0.11	80	MTCG	.087"	–3°	$99.47

K

Freud® LU87 Thin Kerf Rip L

Put this on your saw, and it will glide through tough woods as if it suddenly had a larger motor! Thin kerf technology reduces power requirements while yielding a very fine finish. A 10" has alternate top bevel grind, 20° hook, .094" kerf, .071" plate. An 8" has 20° hook, .087" kerf, .063" plate. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price

Freud® Fine Finish Saw Blades A

LU85 ultimate chop saw blade for glass smooth finish cuts!

You'll get glass smooth finish cuts when you put this blade on your table, radial arm or chop saw. A special low clearance tooth grind (notice the grinding marks on the plate) reduces power requirements while maintaining plate stiffness for precision cuts. This blade should not be used for deep cuts or ripping because of the minimal kerf. Alternate top bevel grind, 10° hook, .116" kerf, .098" plate. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price
LU85-09R	9 in.	5/8 in.	72	ATB (Alternating Top Bevel)	$100.25
LU85-10R	10 in.	5/8 in.	80	ATB (Alternating Top Bevel)	$105.70
LU85-12R	12 in.	1 in.	96	ATB (Alternating Top Bevel)	$154.85

Freud® Fusion Blade B

Incredible rip & crosscuts, even in plywood!

Freud's® Fusion blade sets a new standard for combination blades, in fact it sets a new standard for all saw blades! Its new Hi-ATB (Alternate Top Bevel) tooth geometry and double side grind has virtually eliminated chipping and splintering of the top and bottom surfaces. A new vibration dampening polymer-filling in the expansion slots combined with advancements in plate stiffening and tensioning, and brazing methods helps it provide an exceptionally smooth cut surface finishes in both ripping and crosscutting operations. It is ideal for ripping hardwoods from 3/8" to 1-½" thick and crosscutting hardwood, veneered plywood and laminated materials from ¾" to 3-½" thick, depending upon blade diameter. Fusion blades have Freud's exclusive, tough, nonstick Perma-SHIELD® coating to reduce pitch buildup and heat buildup caused by friction and blade drag. The FFP-0410 steel plate is .098" thick with a .126" wide kerf and an 18° hook angle. P-410T has a .087" plate with a kerf of .091" and 18° hook angle. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price
FFP-0410	10 in.	5/8 in.	40	Hi-ATB	$100.66
P-410T	10 in.	5/8 in.	40	ATB (Alternating Top Bevel)	$80.52

Freud® Combination Blades C

Deep gullets carry away "stringy" chips from ripping, while closely spaced teeth are for crosscutting hardwood, softwood or plywood. "Anti-Kickback" design, four alternate top bevel and one raker tooth grind, 10° hook, .126" kerf, .087" plate. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price
LU84-08R	8 in.	5/8 in.	40	ATB / R	$78.09
LU84-09R	9 in.	5/8 in.	40	ATB / R	$81.38

Freud® Saw Blade Adapter D

This precision bushing is designed to reduce the arbor size of saw blades. Made of 14 ga. steel. Imported.

Part #	Inside Diameter	Outside Diameter	Thickness	Price
176893	5/8	1	.080	$4.31
213282	½	5/8"	.056	$5.70
213287	20mm	5/8"	.056	$5.70

Fine Finish Saw Blade for Beam Saw Blade E

Large Beam, Post, and Timber Saw Blades Beam saw blades are designed for large-capacity beam, post, and timber cutting. During deck season, these blades are a must-have. The 10-¼ in. Bigfoot blade cuts 4x headers and fence posts, 2x sandwiched headers, exposed beams for decks and porches, and seven sheets of ½ in. plywood with one pass. Its capacity allows for cutting up to 3-7/8 in. at 90 degrees and 2-¾ in. at 45 degrees. The 16-5/16 in. beam saw blade is ideal for timber framing, such as laminated veneer lumber (LVL), glued timber (Glulams), and Paralams.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Price
Use on soft- or hardwood, plywood & OSB						
156084	16-5/16 in.	1 in.	0.114	60	ATB (Alternating Top Bevel)	$128.93

Pricing is subject to change at any time due to market fluctuations.

FREUD® CARBIDE-TIPPED SAW BLADES

Freud® LU83 Thin Kerf Combination Blade F

Freud® just keeps raising the bar when it comes to high-performance carbide-tipped saw blades! They laser cut the body of their blades to minimize distortion, making them "truer" right from the start. Their super-slick Perma-SHIELD® blade coating helps reduce friction and makes it resistant to resin buildup, while the thin kerf technology helps it power right through hardwoods even on lower-powered contractor- or benchtop-style saws. Finally, Freud's innovative anti-vibration technology (notice the serpentine vibration-reducing slots) means this blade is unbelievably quiet, compared to most saw blades. A 10" has four alternate top bevel and one raker tooth grind, 10° hook, .083" kerf, and .063" plate. Imported.

Part #	Diameter	Arbor	Teeth	Tooth Type	Price
LU83-10R	10 in.	5/8 in.	50	ATB / R	$68.64

Track Saw Blade for JamesHardie™ and Fiber Cement J

Diablo's track saw blade series sets a new standard for maximum performance, longer life, and superior quality cuts. Designed specifically for track saws, the Diablo HardieBlade™ is the only approved Polycrystalline Diamond (PCD) tooth fiber cement blade recommended by James Hardie™ Building Products. This blade generates up to 50% less respirable dust*, delivering over 75 times longer cutting life than standard carbide blades in all fiber cement materials. Designed specifically for track saws, this blade features a thicker kerf that's perfect for saws with (or without) riving knives.
Designed to fit both 20mm and 5/8 in. (with provided bushing) arbors.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Price

CMT CARBIDE-TIPPED SAW BLADES

CMT 255-ITK Fine Finish Blade G

Perfect for crosscutting laminates, plywood and moldings

Thin kerf technology combines with laser-cut sound dampening channels and a high tooth count to make this blade ideal for demanding crosscutting applications on sheet goods like plywood, particleboard and high-pressure laminates. Suitable for miter, table and compound miter saws. (40° alternating top bevel grind, 15° hook, .071" plate.) Imported.

Part #	Diameter	Kerf	Teeth	Arbor	Price
CM-0255-10	10 in.	0.098"	80	5/8 in.	$58.74

G

CMT ITK Rip Crosscut Blades H

Ripping lumber can really put a strain on a contractor or benchtop saw, especially in thick material. The long stringy chips ripping generates pack into the shallow gullets of high-tooth-count blades, creating heat buildup as they are repeatedly cut. The deep gullets of these blades avoid this so you get edges that are virtually glue-line smooth.

CMT ITK Contractor Framing/Decking Saw Blade I

Application: for framing/decking and general construction.Machines: portable and cordless circular saws.Material: soft/hardwood, lumber, plywood, OSB sheets.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Price
CM-024-07-1	7-¼ in.	5/8 in.	0.071	24	ATB (Alternating Top Bevel)	$6.49

I

CMT Glue Line Ripping Blade J

Rip cuts with an exceptional finish

If you need, at minimum, the performance of a regular 202 blade but crave the exceptional finish of a glue-line rip cut, this is the blade for you. One flat top plus one triple chip grind gives that extra smooth edge. (10" blade has .087" plate.) Imported.

Part #	Diameter	Kerf	Teeth	Arbor	Price
CM-203-630-10	10 in.	0.126"	30	5/8 in.	$74.61

J

CMT 12 in. ITK Fine Finish Cut-Off Saw Blade K

This blade is excellent for soft, hardwood, and plywood cross cuts. It can be used for an occasional rip cut as well. Designed for miter saws, table saws, and radial arm saws.

Part #	Diameter	Arbor	Kerf	Teeth	Tooth Type	Price
Use on soft- or hardwood, plywood & OSB						
CM-252-12	12 in.	1 in.	1/8 in.	72	ATB (Alternating Top Bevel)	$63.25

CMT-P10042W	10-¼ in.	1/8 in.	42	ATB (Alternating Top Bevel)	18°	$48.02

L

Tech Tip

Blade Grinds Demystified

Carbide-tipped circular saw blades use three basic tooth grinds: alternate top bevel, flat top, and triple chip. The alternate top bevel's sharp corners score the wood for clean crosscuts in hard- and softwoods. While primarily a rip-cut profile, the flat top grind is also used on thin-kerf blades. The triple-chip grind is often combined with the flat-top grind to mimic a two-blade scoring saw. The top of the triple chip protrudes slightly, allowing it to precut brittle materials prone to chipping.

C

D

CMT Saw Blades A

The contractor blades are ideal for miter, table and handheld saws because their narrow kerf causes less drag on the motor. They can be used for framing, decking and general construction. Great for ripping soft or hard wood, plywood and OSB sheets. The 10 pack is an economical way to buy blades you will use everyday on the jobsite. When using a jobsite, table saw or stationary table saw, you'll need carbide-tipped ripping blade CM-K024-12 for best results. It can be used on soft or hard woods. For greater versatility try CM-K040-12 for both crosscutting and ripping even in plywood with a mitre or table saws. With 40 teeth, you'll get a bit rougher edge than with the CM-K060 blades. Try CM-K060-12, if you need a smoother finish; with 60 teeth there will be less splintering on your crosscuts. For use on a portable benchtop, a miter, or a table saw in both hard and soft wood as well as plywood. Imported.

This contractor pack of 10 is ideal for portable and cordless saws.

CMT Fiber Cement Circular Saw Blade H

Compatible with Festool® TS 55 & HK 55 Track Saws - For Rips and CrossCuts through abrasive materials like Fiber-cement
Features:

- Long lasting performance - up to 60 times longer than carbide blades in abrasive materials
- Polycrystalline (Diamond) Teeth
- Anti-vibration and noise reduction
- Materials to cut includes:
- Eternit®, Swisspearl®, Fermacell®, Ivarplank®, HardiePlank®, HardiePanel®, chipboard, MDF, Corian®, Duroplast®, Formica®, plasterboard and thermoplastic.

Kreg ACS

Portable, multipurpose table top with integrated guides for precise rip, angled, and crosscuts in boards and plywood.

Build your Adaptive Cutting System by adding the Project Table to create a portable cutting system that adapts to your needs. Mounting the Guide Track to the Project Table allows you to crosscut and rip solid wood boards, cut mitered angles, bevel edges, plus support and precisely cut plywood and large panels to size.

The Project Table Top includes multiple accessories that position your materials securely and precisely, so you get accurate, smooth, and straight cuts every time.

- (2) Track Hinges and Mounting Plates
- (4) Versa-Stops
- (2) Repetitive Stops and Joining Bar
- (1) Miter Guide
- (1) 48" Extension

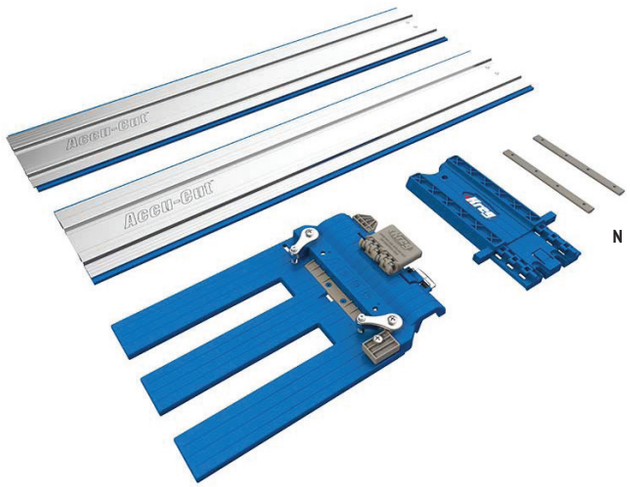

The Project Table Top is made from flat, stable MDF with an aluminum frame for additional stiffness. Precision-machined holes ensure alignment of the aluminum Versa-Stops with the track for perfect 90° and 45° cuts. The Project Table Top is designed for use with the Adaptive Cutting System Project Table Base.

Kreg Accu-Cut Cross-Cut System N

- Rip, crosscut, and make angled cuts up to 50" long in plywood, MDF, and panels. Simply align the Guide Track with your marks to make accurate cuts. Hold track in place without clamps thanks to anti-slip guide strips. Prevent splintering with anti-chip strips that support material during the cut. Begin cuts easily with a Starting Block that the supports saw and allows normal blade guard operation. Mount almost any circular saw — left- or right-blade — to the Universal Sled. Take your saw to the material instead of having to take your material to the saw.

McFeely's

Helix Flush Trim Bit C

The bit gives a chip free, splinter free laminate and veneer trimming due to its downward shear action. Imported.

Part #	Overall Diameter	Bearing Diameter	Height	Shank Diameter	Overall Length	Price
FT42-202	¾ in.	¾ in.	1 in.	½ in.	3-1/8 in.	$37.14
FT42-204	¾ in.	¾ in.	2 in.	½ in.	4-1/8 in.	$42.53

C

Single Flute Straight Bit D

This single-fluted bit was designed for maximum chip clearance and fast feed rates even on high-production work. It can be used on hardwoods, softwoods or plywood with hand-held, table-mounted routers or CNC machines. Imported.

Part #	Overall Diameter	Height	Shank Diameter	Overall Length	Price
FT03-140	¼ in.	1-½ in.	¼ in.	2-½ in.	$14.54

D

Single Flute Pilot Panel Bits E

This bit is ideal for template work and cutting openings in paneling and siding. The carbide-tipped pilot panel bits outlast standard high speed steel bits many times over. The self-starting point acts as a guide for template work. Imported.

Part #	Overall Diameter	Height	Shank Diameter	Flute Count	Overall Length	Price
FT26-100	¼ in.	¾ in.	¼ in.	1	2-¼ in.	$12.29
FT26-104	½ in.	1-¼ in.	½ in.	1	3-¾ in.	$20.79
FT28-104	½ in.	1-¼ in.	½ in.	2	3-¾ in.	$30.58

E

Solid Carbide Flush-Trim Bit F

Solid micrograin carbide extends the life of this bit, and the self-piloting feature eliminates the need for a bearing. Imported.

Part #	Overall Diameter	Height	Shank Diameter	Overall Length	Price
SF64-100	¼ in.	3/8 in.	¼ in.	1-½ in.	$12.65

F

Downward-Spiral Bits G

Solid carbide down-spiral bits are ideal for smooth, chip-free routing where chip removal is not a problem. Use on composition materials, plywoods, hardwoods and softwoods. Imported.

Part #	Overall Diameter	Height	Shank Diameter	Overall Length	Price
SD76-100	1/8 in.	½ in.	¼ in.	2 in.	$25.00
SD76-101	3/16 in.	¾ in.	¼ in.	2 in.	$23.45

Freud® Premier Adjustable Rail &Stile Bit (Shaker) H

Produce perfect fitting rail and stile doors from 58" to 1-¼" stock. Shims adjust panel grooves down to 7/32" and up to 3/8" thick and are ideal for plywood panels. Unique cutter geometry to eliminate tear out has Patented Extended Tenon Capability. With the top portion of the cutter, including the bearing and the spindle, removed to produce the front of the long tenon profile. TiCo™ Hi–Density Carbide to maximize bit life and material finish. Perma–SHIELD® coating reduces heat & pitch build–up from rust. Whether you are a fine woodworker or a high production cabinet shop, one thing is for certain you depend on the best, most precise cutting tools that deliver superior quality finish with long cutting life. Every product is specifically designed for superior performance and maximum life. Just like you take pride in your projects, we take pride in our product so you receive the best cutting performance every time.

Part #	Description	Price
RS99-764-1	Freud Premier Adjustable Rail & Stile Bit (Shaker) - 1-11/16 in. Dia. - ½ in. Shank	$127.47

Reversible Wainscoting Ogee I

For milling matching joints in wainscoting, set the bit height just once both male and female joints. Rout stiles face down and rails face up for a perfect fit, not further fence or height adjustments are needed. After routing the matching profiles, rout a rabbet on the back to accept the tongue of a raised panel in ¾" stock. This bit can be used on composite materials, plywood, hardwoods and softwoods from ½" to 5/8" thick and may be driven by hand-held or table-mounted routers. Imported.

Pricing is subject to change at any time due to market fluctuations.

McFeely's

Freud Wavy-Joint Bit G

Wavy Joint bits increase the surface area of glue joints to produce the strongest possible joints between sections of solid surface material. Waves formed in material accommodate more surface glue, creating a solid joint. Use in hand-held routers equipped with edge guides, or in table-mounted routers to rout any solid surface material.

Part #	Diameter	Height	Shank	Length	Price
CM-85-033	5/8 in.	1-13/16 in.	½ in.	3-1/8 in.	$32.84

Freud Crown Molding Bit H

Customize your decorative crown moldings to add elegance to any room with Freud Crown Molding Bits. Choose your favorite shape from our selection of five profiles, then adjust the bit height or fence position to change the final profile or dimension to suit your project. Use with CNC or table-mounted routers to mill hardwood or softwood molding.

Part #	Diameter	Height	Shank	Length	Price
CM99-402	1-¼ in.	17/32 in.	½ in.	3-¾ in.	$76.23

Freud Finger Pull Door Lip Bit I

Finger Pull Bits mill an edge on cabinet doors and drawer fronts that allow opening without any pulls or hardware to clutter the surface. Easy to set up and use, these bits can be used on table-mounted routers. Cuts all composition materials, plywoods, hardwoods, and softwoods.

Part #	Diameter	Height	Shank	Length	Price
FP99-065	2 in.	5/8 in.	½ in.	2-5/8 in.	$80.35

Freud - 2pc Quarter Round Entry Door Rail and Stile Router Bit Set J

Patented and unique, Freud's Entry and Interior Door System lets woodworkers build doors with true mortise and tenon construction for rock-solid joints that last a lifetime. These sets include rail and stile bits that are perfectly matched to produce perfect joints out of the box. Or remove the top section of the rail bit to produce long tenons of any length for the strongest possible joints. The 99-267, 99-268 and 99-269 sets can be used to mill 1-3/8" or 1-¾" thick doors. For even thicker material, choose the 99-277 set for 2" or 2-¼" thick doors. Use with table-mounted routers to mill hardwood or softwood door parts.

ROUTER BITS - FREUD® & CMT

A

CMT 3-Piece Entry & Door Bit Set A

This CMT three-piece router bit set simplifies door construction, making it easy as 1, 2, 3! It is not the only advantage, in fact this is a multifunctional set for door and furniture makers building entry or passage doors and any furniture tenons. The included tenon cutter produces a beefy 27mm (1-1/16") long tenon. Coupled with the cope cutter, you can produce long and strong tenons with minimum setup. As an extra bonus the tenon cutter can be used for furniture making requiring any tenon from 4,7mm (3/16") to 16mm (5/8") thick.

D

Freud Adjustable Tonge and Groove E

Freud's patented Adjustable Tongue and Groove Set is ideal for building Shaker-style cabinet doors or any project requiring precise tongue & groove joints with perfect finished surfaces. The exclusive design features cutters with opposing shear angles to eliminate chipping on your work's top and bottom surfaces. The spacer system allows adjustment at .002" increments to produce joints in ½" to 1-¼" thick material with grooves from 7/32" to 3/8" deep. Bits are ½" shank and should be used in table-mounted routers.

Keep Blades/Bits Gunk Free G

Help keep your blades and bits producing to their peak performance, increasing the time needed between sharpening or buying new blades and bits and free of resin, pitch and adhesives with the CMT cleaner. This is safe, non-toxic and gets in the microscopic cracks of metals to attack the bond between the resin and the metal. Just spray it on, let it sit a minute or so, then wipe the sticky stuff off.

Part #	Description	Price
CMT-2050	Bit & Blade Cleaner	$11.45

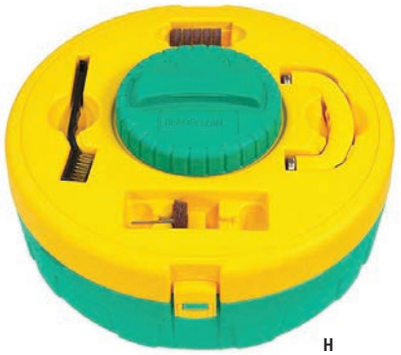

G

MicroJig BladeClean *The BLADECLEAN System is an all-in-one solution designed to clean saw blades and router bits faster and easier than ever before.*

The included magnetic handle allows you to lift and move blades more safely, and the custom designed scouring pad cleans an entire side of a blade in a single motion, all without dangerous chemicals.That means no more tediously brushing individual teeth. Start to finish, users can clean a 7-½ in. to 12 in. diameter saw blade in under a minute. A simple solution of water and common household cleaner can be safely stored in the sealed cleaning well for later re-use.The locking lid features an additional well for storing and soaking router bits. Also included are 6 small scouring discs and a custom heavy-duty mandrel specifically designed to clean router bits quickly with a common rotary tool or power drill. The discs are replaceable in packs of 14, and are also useful for cleaning and restoring other metal items in the shop, such as chisels, planes, and a variety of other hand tools.

BLADECLEAN CPR Disc Set is replacment discs for use with a Rotary Tool.

I

Freud Beadboard Tongue and Groove J

Freud's Beadboard Tongue and Groove System mills perfect beadboard in a variety of thicknesses from 3/8" to ¾", and in almost any width. Mill beadboard from any hardwood or softwood, and use it to create a beautiful effect as wainscoting, wall or ceiling paneling, cabinet and bookcase backs, and more. The tongue and groove bits includes two slot cutters: use the ¼" cutter to mill a ¼" thick tongue and groove for ½" to ¾" stock, or switch to the 1/16" cutter for thinner material. Once the tongue and groove joints are complete, use the solid carbide Radius V-Groove Bit to complete the beadboard design.

Part #	Diameter	Height	Shank	Length	Price

Freud Mortising Bit C

Freud Mortising Bits are designed to deliver clean, precise, splinter free mortises in plywood, veneer, solid wood or almost any composite material. Most of these bits feature a down shear design that helps eliminate splintering by pushing wood fibers down during the cut. Ideal for mortising hinges and hardware, or cutting grooves and dadoes. These bits are designed with deep center gullets for maximum material removal without chip loading. Use in any CNC or portable router.

H

Freud Windowsill Bit I

Freud's Window Stool Bit is perfect for renovators and remodelers who need to match an existing window stool, or to add a beautiful decorative touch to an unadorned window opening. The profile based on a traditional New Orleans design, and is appropriate for almost any wooden window application. Includes a ball bearing guide for use with patterns or to align the fence. Use in hand-held or table-mounted routers to cut hardwood, softwood, plywood or composites. Suitable for 11/16" or ¾" thick material.

Part #	Diameter	Height	Shank	Length	Price
WS99-462	1-13/32 in.	1 in.	½ in.	2-7/8 in.	$67.77

I

CMT Tenon Cutting Router Bit J

If you've struggled cutting fitting tenons, here's the perfect solution for you. CMT's tenon cutting router bit will produce perfectly fitting tenons in every board you cut, even if the boards vary slightly in thickness. Simply set the distance between the cutters using the included spacers, and you can easily cut tenons

Milescraft Sign Making B

Create custom wood-engraved signs with the SignCrafter™. Self-spacing 2-½" horizontal characters fit into the 36" adjustable clamping system without making any measurements. Affix the character templates and start routing for uniformly spaced letters and numbers. With TurnLock™ as an integral feature on the BasePlate, the bushing exchange is tool-free, hardware-free, and takes only seconds.

SignCrafter™ Templates (82 pcs. total) 2-½ in. Tall.
SignPRO™ Router Templates (206 pcs. total) 1-½ in. and 2-½ in. Tall.

The Milescraft Core Box Long Reach Router Bit Set contains 3 bits that are 2-3/8☒ long. The tungsten carbide-tipped bits are perfect for routing wood signs. This 3-bit set comes with a ¼☒, 3/8☒, and ½☒ core box bit, each with a ¼☒ shank.

Milescraft HingeMate C

Hang doors like a pro with the HingeMate300™. This kit is great for installing new doors or replacing/repairing existing doors. The HingeMate300™ comes with the tools and templates required to route doors and jambs for hinges, strike, and latch plates.
Professionally hang doors with the HingeMate350™. This complete kit is great for installing new doors or replacing/repairing existing doors. The HingeMate350™ comes with all the tools, templates, and accessories required to route doors and jambs for hinge, strike, and latch plates.
Steel Template Frame

- Durable steel frame with adjustable cams allow for 1-¾" and 1-3/8" door settings
- Can be mounted to both door and jamb
- The CornerChisel™ is self-aligning for accurate work. Square up your hinge mortises after routing. This fast and precise tool allows you to accurately cut 90° corners. This is an ideal tool for hinges and other applications. Quickly and clearly remove and install door hinge pins with the PinDoctor™ from Milescraft. The PinDoctor™ makes operating on door hinges easy. The clear body lets you accurately align the solid steel striking pin with your hinge and a tap of the hammer will loosen hinge pins for removal.

D

Sanding Belts D

Premium quality for your belt sander

Klingspor's long lasting belts are designed for the furniture industry, unlike cheap "economy" belts. Resin bonded aluminum oxide on a heavy "X" weight cotton cloth backing makes them fast cutting and long lasting. Closed coat formulation provides a consistently fine scratch pattern. Suitable for hard and soft woods. A #4 butt splice allows you to run these belts in either direction.

Abrasives: Which One Should I Use?

Thankfully, most woodworkers don't need to do extensive testing to determine the best abrasive for their use. Keeping just a few basic facts in mind makes choosing an abrasive product relatively easy for most woodworkers.

Abrasive Materials

Of primary importance is selection of the abrasive grain. Four different materials are commonly used: garnet, aluminum oxide, silicon carbide and alumina-zirconia.

Garnet is a golden-orange-colored sandpaper that is a traditional woodworking favorite. It is a natural mineral that cuts fast but wears out rather quickly. It's a good choice when sanding woods that tend to "load" up the paper before the grit has lost its bite. It has been largely replaced by aluminum oxide.

Aluminum oxide is the familiar brown to reddish brown sandpaper that has become the standard for production woodworking. It is a synthetic abrasive that is very hard and tough, providing good abrasive life for both metal and woodworking applications.

Silicon carbide is a shiny black man-made abrasive most often used for "wet-or-dry" sanding products. Its grains are very hard and sharp but lack the toughness of aluminum oxide. It is long-lasting, because the abrasive grains fracture as they wear, exposing sharp new edges. It is most often used as a finish sandpaper.

Alumina-zirconia is the new blue man-made abrasive. It is extremely hard, sharp and tough and used chiefly in abrasive planing operations, where its superior life offsets the higher cost.

Backing Materials

For woodworkers, abrasives work best when bonded to something. That's where the backing comes"

Paper backings generally provide a finer finish than cloth backings, although they are less durable. Paper flexibility is governed by its weight, ranging from lightweight, flexible "A" weight to heavyweight, stiff "F" weight. Finishing paper is "A" or "B" weight; cabinet or general-purpose papers are "C" or "D" weight, and "E" and "F" papers are used for sanding belts.

Cloth backings are more durable than paper and used primarily for belts or disks. Lightweight belts are designated as "J" weight and are suited to contour sanding. The most common backing is "X" weight; it is available on virtually all product types. Heavy-duty applications, such as abrasive planing, require the strength of "Y" weight backings.

Open Coat, Closed Coat and Stearated

Open coat refers to the fact that the abrasive grains are spaced farther apart to allow for the buildup of wood dust which, if heavy enough, can clog the paper. It is the most common abrasive style.

Closed-coat products have almost complete abrasive coverage so that each abrasive grain abuts the next. This leaves very little room for sanding particles. Closed-coat bonding provides a very uniform scratch pattern and is used primarily for fine-grit products.

Stearated abrasives have a thin detergent-like coating applied to them to help prevent clogging. This is particularly beneficial with resinous materials. Note: Stearated abrasives should NOT be used when water-based finishes will be used.

Sanding and Sand Paper

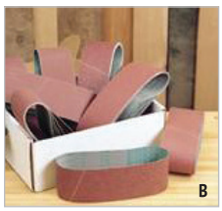

ABRASIVES

A

Planer Belts A

Big furniture factories have been using abrasive planers to surface lumber for years! The swirly grain patterns of highly figured woods like curly maple suffer from tearout problems that are eliminated when the "chips" are really just sawdust. You couldn't use just any abrasive or you would be changing belts every other board. Alumina-zirconia is just two steps below diamond in hardness, so it really stands up to the abuse. These are only available in coarse grits (abrasive planing isn't very practical with 320 grit!) and are designed specifically for maximum stock removal and abrasive life. A #4 butt splice allows you to run these belts in either direction. Imported.

Part #	Grit	Price
3" x 21" Belts

B

Bargain Box of Sanding Belts B

Top-quality belts - bargain pricing!

Every grit you could need is included in this bargain box of Klingspor industrial sanding belts. At this low price, you'd think these are cheapo belts that won't hold up under normal sanding pressure. WRONG. These are the same premium quality, heavy cloth-backed, #4 butt-joined, resin coated, aluminum-oxide belts we sell individually. Each box contains six sleeves of belts in the following grits: one sleeve 180-240 (fine), two sleeves 120-150 (med-fine), two sleeves 80-100 (medium) and one sleeve 50-60 (coarse). Depending on the size, there are either five or six belts per sleeve.

Pad Holder

Sanding Sheets

Ideal for hand or power sanding

We offer three types of sandpaper to fit virtually all woodworking needs. Silicon carbide: "wet-or-dry" sanding paper, is primarily used for final sanding. Aluminum oxide paper is the industry standard. "Stearated" aluminum oxide "C" weight is specially coated to reduce clogging. **Note:** stearated paper is not compatible with all finishes, such as CrystaLac®. Sheets are 9" x 11." Imported.

Nonwoven Abrasive Pads I

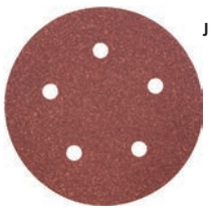

Works like steel wool without the rust!

If you like using steel wool for that final buffing or to scuff a finish between coats, you'll love Klingspor's NonWoven Abrasive Pads! Steel wool metal fragments are a real problem when using a water-based lacquer or varnish. They often leave little rust specks in the finish! These pads are easy to use (with or without the handy "pad holder"), last longer and don't leave metal fragments behind. The white "non-abrasive" pads are used primarily for polishing, while the other pads function as sandpaper substitutes and are especially effective at removing old finishes. The pad holder has tiny studs on the bottom to grip the abrasive material firmly, yet it also allows for simple removal. Pads measure 6" x 9". Imported.

Part #	Color	Grit	Sandpaper Equivalent	Qty	Price

K

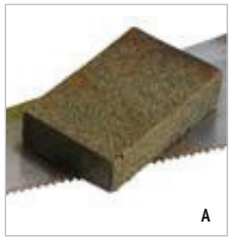

Abrasive Belt Cleaner K

Cleans clogged sanding belts better than crepe!

Crepe is the standard rubber formulation used for belt-cleaning blocks. It is pretty much the same stuff people have been wearing on the bottoms of their shoes for years, and if you have ever had a pair of crepe-soled shoes, you'll know how long it lasts. Easily cleans away loaded wood particles and resin that have accumulated on the surface of the abrasive belt or disc. More importantly, this cleaning stick is all natural and no chemicals are needed. Imported.

Part #	Description	Price
KA-1000	Abrasive Cleaner, 2" x 2" x 8"	$13.45

ABRASIVES

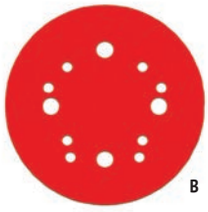

A

Sandflex® Abrasive Blocks A

The grit goes through and through

Whether you need to shine up your table saw top or just remove a bit of stubborn rust from a hand saw stored in a damp basement, these rubberized abrasive blocks are just the thing. The grit is impregnated throughout the block, as they wear, new grit becomes exposed. They last until the final little piece of block is gone. Available in three different grits. Each block measures 3" x 2" x ¾" thick. Imported.

Part #	Description	Price
KSA-9996	Fine Sandflex	$7.85
KSA-9997	Medium Sandflex	$7.85
KSA-9998	Coarse Sandflex	$7.85

B

Freud® Random Orbit Sander Abrasives B

Premium Ceramic sanding discs last many times longer than "regular" sanding discs and the Freud® Clog-Shield ™ coating also reduces pitch build-up. Each StickFast™ pressure sensitive disc has an industrial grade adhesive for strong bonding to the sanding pad and an easy pull tab to peel off the backing paper. The Hook & Lock™ attachment method allows for repeated disc changes while maintaining secure attachment each time. Both 5" and 6" discs have a universal 12-hole pattern that adapts universally to the various pad configurations on the market today. Imported.

D

SandSharp™ Peel & Stick Sharpening System D

Say goodbye to expensive oilstones or Waterstones! Put away your precious diamond lapping paste. Break out the old honing jig if needed, and put an incredibly sharp edge on all your chisels and plane irons with this straightforward peel-and-stick system.

Unlike sharpening stones of fixed length, this system uses adhesive-backed silicon carbide abrasive paper, which you cut to the desired size and attach to a phenolic backer plate or glass plate. Instead of messy honing oil, a few drops of water keep the abrasive cutting efficient.

FASTCAP® TOOLS & ACCESSORIES

A

B

C

D

E

F

FastCap® Power Mags A

Use these high-performance neodymium magnets to make invisible magnetic door catches. They're also a great way to hold chuck keys or wrenches to machinery, keeping them readily available. Imported.

Part #	Description	Qty/Pk	Price
FSC-9024	3/8" Power Mags	10	$43.86
FSC-9036	¾" Power Mags	2	$14.63

FastCap® Power Shears B

Razor-sharp shears stay sharp

These Power Shears are incredibly tough and sharp. Imagine cutting wood veneer, laminate, lace, upholstery, cloth and aluminum all with the same shears! Overall length is 6" with a 3" blade length. The handles are covered with a soft grip for operator comfort. Imported.

Part #	Description	Price
FSC-0100	Power Shears	$21.93

FastCap® Speed Dollie C

Lightweight, compact and heavy-duty - up to 250 lb. capacity!

If you're more a "Do-it-By-Your-Selfer" than a "Do-it- Yourselfer," then the FastCap® Speed Dollie was designed with you in mind. You'll no longer need to call for help when moving awkward, heavy items (like cabinets). The Speed Dollie is lightweight and compact but can stand up to heavy-duty use – load capacity is 250 lbs.! Frame is constructed of durable steel, non-marring castering wheels allow easy movement in any direction and the support arm adjusts to accomodate taller pantry cabinets or any other item being moved. The dollie folds down for easy storage. Dimensions, when folded down, are 13.5" x 14.5" x 3.5". Imported.

Part #	Description	Price
FSC-9900	Speed Dollie	$95.02

FastCap® Knuckle Bender D

3-in-1 door installation tool

The Knuckle Bender is three tools in one. It assists in removing the pin for door removal, aligns the hinge for pin installation and easily bends the knuckles on the door frame to adjust any sag in the door for perfect installation. This simple, unique tool saves fingers and knuckles from getting smashed with the hammer and can bend the hinge into place with ease. For someone working alone, this device can be a huge time saver. Imported.

Part #	Description	Price
FSC-9040	Knuckle Bender	$29.22

FastCap® TracPad™ E

Make your own bench pads!

Peel and stick the 2-3/8" traction rubber to both sides of a wood block, and these pads will grab your bench and the wood for amazing staying power. The pads can also stick to your car console to keep things like your cell phone from sliding around. The kit includes eight self-adhesive traction pads and four blind nails, 1"x 5/8".

Part #	Description	Price
FSC-9037	TracPad™ Kit	$6.59

FastCap® Heavy Duty Flush Cut Pliers F

Cut nails to 1/8", not hardened

When end nippers are not enough, pull out heavy duty, flush cut pliers to cut things like nails. You can trust that you aren't leaving scraps around, because these pliers come with two removable magnets to trap the cut off nail head. The head of the pliers is flat and angled so you can cut flush or pry up. The handle is covered with textured material for a sure grip. Pliers are 8" L and have a 7/8" cutting length. Imported.

Part #	Description	Price
FSC-6032	Heavy-Duty Flush-Cut Pliers	$29.26

Pricing is subject to change at any time due to market fluctuations.

FastCap® My Grip and Speed Grip

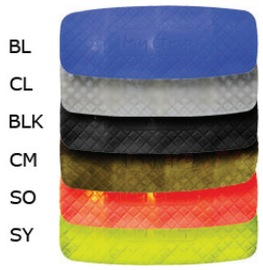

Using only hot water (200°F) and the My Grip or Speed Grip handle material, you can mold any handle to the exact shape of your hand, making it more comfortable to hold for longer periods of time. Put My Grip or Speed Grip on your hammer, saw, power tool, rake, bucket handles, luggage handles, knives or even your golf club handles and absorb shock and reduce fatigue. Place the My Grip or Speed Grip material in hot water for 1-2 minutes and safely remove. Then, while it is soft, wrap it around the handle and squeeze tightly. Made a mistake? Don't worry, cut it off and start over. It's reusable! We have camo, safety orange, blue, black, safety yellow and clear; includes textured wrap for extra gripping ability. Measures 5" x 5" or 1-½" x 4". Imported.

H

HOD (Handle On Demand) I

The innovative HOD (Handle on Demand) can lift a load capacity of 100 pounds per handle, saving you countless hours in the chiropractor's office from bending down to lift heavy items such as file or kitchen cabinets. Just put the handle on any non-porous surface, flip the lever and lift up to 100 pounds for a single and 200 pounds for a double handle. It works great on non-porous surfaces, laminates, metal, and glass. The handle grips are molded to the shape of your fingers for greater comfort. Made in China.

Kreg® Crown-Pro™ A

For crown molding up to 5-1/2" wide

Creating your own crown molding has always been a huge burden for even the most experienced do-it-yourselfer. The Kreg® Crown-Pro™ simplifies the process by eliminating coping altogether. It adjusts for any spring angle between 30° and 60° and works with crown molding up to 5-½" W and comes complete with an angle finder for accuracy.

Part #	Description	Price
KRT-2800	Crown-Pro™	$34.99

B

Kreg® Featherboard B

The Kreg® True-FLEX™ featherboard design provides just the right amount of pressure to the work piece. The wedge lock system allows the featherboard to be secured to a variety of shop tools without additional hardware. Made of durable plastic, they are available as a single or double pack.

Part #	Description	Qty	Price
KRT-3010	True-FLEX™ Featherboard	(1) Each	$24.99
KRT-3020		2-Pack	$39.99

C

Kreg® Cabinet Hardware Jig C

Makes knob and handle installation a breeze

Nothing detracts from a set of cabinets faster than handles that seem to be randomly placed on the doors and drawer fronts. This adjustable edge guide jig makes it easy to accurately install handles and knobs, regardless of size and style. Made of virtually indestructible plastic with hardened steel guides to ensure straight holes. Includes: **1** Jig Base, **1** Edge Guide, **2** Drill Guides with knurled nuts, **2** Non-slip pads, **2** T-knobs and bolts, and **1** Owner's Manual with complete instructions. **Note:** A 3/16" (5 mm) drill bit is required, but not included. Made in USA.

Part #	Description	Price
KT-6637	Kreg Drawer and Door Hardware Jig	$32.00

D

Anthony's Hinge Jig D

Developed by a cabinet maker, Anthony's Hinge Jig is a great tool that helps install hinge hardware to Euro Style cabinets.The Hinge Jig locates the center line for a hinge. It mounts easily into the 5 mm holes and uses the cursor to draw a center line. If cabinets don't have a 5 mm hole, use pins and align them along the edge of the cabinet, drill with a 5 mm driver bit in the drill guides, and repeat the steps for finding the center line.

Features:

- Two pins fit in 5 mm holes in a 32 mm cabinet system
- To 5 mm drill guides to drill holes in a 32 mm cabinet system
- Locates center line for drilling hinge cup

Part #	Description	Price
FSC-HINGE-JIG	Anthony's Hinge Jig	$7.26

KREG® SAW ACCESSORIES

Kreg® Band Saw Fence A

The fence that makes resawing easy!

Most band saws do not come with a fence, or the fence that's included isn't worth using. Kreg's Precison Band Saw Fence is a top-notch fence designed to make precise band saw work easy. The fence is adjustable to allow for the natural tendency of a blade to drift as it wears. It includes the mounting bar (fits most 14" saws) and the fence. For precision resaw work, Kreg's® optional 4-½"H resaw guide (shown installed) has a gently curved face that makes it easy to track the lumber through the blade. The optional micro-adjuster allows precision fence adjustments.

Part #	Description	Price
KTC-1001	Complete Band Saw Fence System	$149.00
KTC-1002	Kreg 4-½"H Resaw Guide	$27.99
KMS-7214	7"H Resaw Guide	$34.99
KTC-1003	Kreg Micro-Adjuster	$29.99

Kreg® Precision Trak and Stop System B

The Kreg® Precision Trak and Stop Kit will turn your woodworking shop into the professional production shop of your dreams. The KMS-8000 kit includes **4** - 2' pieces of Top Trak, **1** Flip Stop, **1** Production Stop, **1**-12' left-to-right reading self-adhesive tape, **1** right-to-left reading self-adhesive tape, and detailed instructions.

Part #	Description	Price
KMS-8000	Kreg® Precision Trak and Stop System	$169.00

Kreg® Production Stop C

Measure once, then set the Production Stop, and repeat the same-length cuts as fast as you can put the material in place. The production stop has dual lens cursors so that you can use it on either side of the blade without reconfiguring. It drops onto both the Top Trak and Heavy-Duty Trak from the top so you don't have to slide it all the way to the end of the track to be removed or to change its position.

Part #	Description	Price
KMS-7800	Kreg® Solid Production Stop	$34.99

Kreg® Swing Stop D

The Swing Stop features an adjustable lens cursor that can be zeroed out to assure pinpoint accuracy. When you don't need it, the pivot design allows you to swing it out of the way.

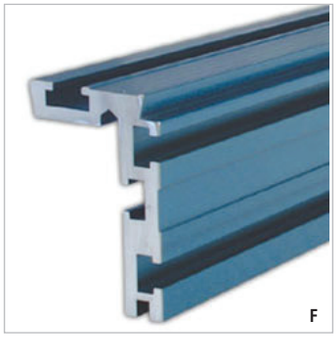

Part #	Description	Price
KMS-7801	Kreg® Standard Swing Stop	$44.99

Kreg® Universal Clamp Trak Kits E

Buy one of these Clamp Trak kits and turn your work bench or Kreg® Universal Bench into a versatile, multi-purpose clamping system. Made from anodized aluminum, the track sets come in two sizes: A 27" mated with a 45" to fit 30 x 48" and larger benchtops or your 20" x 44" Kreg Universal Bench, or you can buy a 27" track mated with a 69" for the 20" x 64" Kreg® Universal Bench or a 30 x 72" benchtop. Both tracks accept Kreg® AutoMaxx and standard bench clamps. The tracks are 2-¼" wide by .695" thick and can be flush or surface mounted. Mounting hardware and instructions are included. Made in USA.

Part #	Description	Price
KKS-2745	27 and 45 Trak Kit	$129.99
KKS-2769	27 and 69 Trak Kit	$184.99
KR-0955	Kreg Multipurpose Project Blocks	$24.00

Kreg® Heavy Duty Trak F

Heavy Duty Trak comes in a 4' section and has four T-slots, that accommodate ¼" hex bolts for attachment.

Part #	Description	Price
KMS-7704	Kreg® Heavy-Duty Trak – 48" x 1-3/8" x 2-¼	$89.99

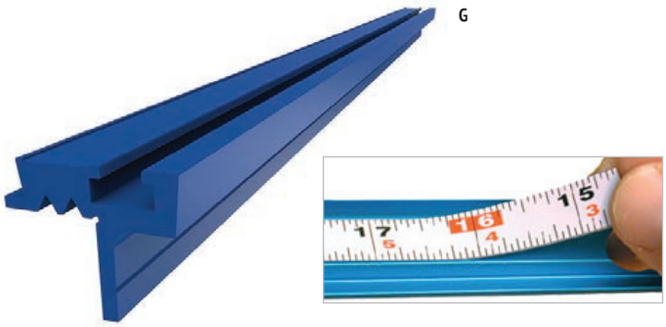

Pricing is subject to change at any time due to market fluctuations.

KREG® SAW ACCESSORIES

Kreg® Aluminum Top Trak and Adhesive Tape Measures G

The Aluminum Top Trak comes in 2' or 4' sections which have a self-aligning L-shaped foot for easy installation to a shop-made fence. Just drill 1/8" holes in the ¾" groove in the aluminum extrusion. Mounting screws are included.
A ½" indentation runs along the front side for application of the self-adhesive tape measure. Both 12' Imperial and 3.5 m metric tape measures in right-to-left and left-to-right reading are available. Purchased separately: KMS- 7723 and KMS-7724. Imported.

Part #	Description	Price
KMS-7723	Kreg® 12' Adhesive Tape R-to-L	$14.99
KMS-7724	Kreg® 12' Adhesive Tape L-to-R	$14.99
KMS-7729	Kreg® 3.5m Adhesive Tape L-to-R	$14.99

Kreg® Mini Trak & Combo Trak H

The Mini Trak is available in 4' sections and can be surface mounted or sunk flush, using the pre-drilled countersink holes, into a ¾" x 3/8" dado or rabbet in your workbench.
A 48" Combo Trak is also available. The T-slots will capture a standard ¼" hex bolt. **Note:** Tape measure not included.

Part #	Description	Price
KMS-7509	Kreg® Mini Trak – 4'	$27.99

Kreg® Jig and Fixture Bar I

Perfect for building your own jigs and fixtures. The Jig and Fixture Bar, standard equipment with the Precision Miter Gauge, can be adjusted with six nylon screws to take up any play in the miter gauge slot. Mounting holes are placed every 4".

Part #	Description	Price
KMS-7303	Kreg® Jig & Fixture Bar – 30"	$34.99

Kreg® Rip-Cut™ Guide J

Make fast, accurate rip cuts without marking

The Kreg Rip-Cut guide lets even a novice cut plywood panels using most available left or right hand circular saws. Whether you can't afford an expensive track saw or you just don't have the room for a table saw, the Rip-Cut comes to the rescue. Cut off just a little, 1/8", or a lot, up to 24". The solid aluminum guide rail, 3" W x 30" L has an easy-to-read scale and a reversible guide arm-2" W x 10" L. Depending upon the circular saw, right or left, that you choose to use it with, the Rip-Cut gives you full support throughout the entire cut. The saw sled measures 6-½" x 8-½," and the unit weighs only 2.5 lbs.

Part #	Description	Price
KMA-2685	Rip-Cut™ Guide	$44.00

Kreg Accu-Cut Cross-Cut System for Circular Saws K

Transform your circular saw into a high-performance, track-guided cutting tool

Start projects right by making straight, accurate, splinter-free cuts with your circular saw and the Accu-Cut™ Circular Saw Track Guide. It rips, crosscuts and makes angled cuts up to 50" long in plywood, MDF, and other large panels with super-simple setup, precise accuracy, and amazing control.
The Accu-Cut™ guides your circular saw along an aluminum track that keeps the saw moving in a straight line easily. The Accu-Cut™ design makes it simple to set up by just aligning the track with your cut line. No clamps are required to hold the track in place thanks to dual guide strips. They feature an anti-slip coating to prevent slipping, and an anti-chip feature to prevent splintered cuts. Plus, the track makes it easy to make straight cuts on sheets that don't have a straight, flat edge.

Part #	Description	Price
KMA-2700	Kreg Accu-Cut Cross-Cut System for Circular Saws	$89.00
KMA-2750	Kreg Accu-Cut Xu Expansion Pack	$99.00
KMA-3700	Kreg Accu-Cut Xu Circular Saw Sled	$179.00

KREG® SAW ACCESSORIES

A

Kreg® Precision Miter Gauge A

Rock-solid accuracy, 0.001 degree adjustability, and a "slop-free" miter bar

One miter gauge with everything you need for accuracy.
Why spend time calibrating a miter gauge when you can get amazing accuracy right out of the box? Our Precision Miter Gauge System requires no calibrating and features positive stops at 0°, 10°, 22 ½°, 30°, and 45° to make it easy to cut accurate miters quickly. Of course, when you want to cut a more complicated angle, the easy-to-use Vernier scale allows for fast adjustments to 1/10th of a degree. Plus, the Precision Miter Gauge System offers a long, anodized aluminum fence and stop system that lets you easily make accurate, repeatable cuts. KTC-2401 is Drop Shipped.

Part #	Description	Price
KTC-2401	Miter Gauge System (includes Guide Bar, 24"L fence, head, & Swing Stop)	$159.00

B

Kreg Trak Clamps B

The perfect companions to the Accu-Cut™ family of products, as well as the Adaptive Cutting System.
These easy-to-use Track Clamps lock into place on the underside of the Accu-Cut™ track and Starting Block to offer additional holding power when needed—such as when working with slick-surfaced sheet goods such as melamine-coated particleboard, or when cutting with a single length of track.

Part #	Description	Price
KMS-7520	Kreg Trak Clamps - Qty:2	$24.99

Pricing is subject to change at any time due to market fluctuations.

Kreg 90° Pocket-Hole Driver C

Limited Quantities - Get them while supplies last!

Turn any drill into a 90° driver with the Kreg 90° Pocket-Hole Driver. This compact drill attachment allows you to drive screws in places you couldn't normally reach with your drill. The included 3" square-drive bit has a magnetic tip that locks into the head of a pocket-hole screw and won't slip out – so you can drive screws with confidence, no matter where they are. This attachment works with all hex shank bits, making it great for more than just pocket-hole screws.

With an ergonomic design, the 90° Pocket-Hole Driver is easy to hold in place with one hand while you control the drill with the other. It's also impact-rated for use with an impact driver. Whenever you need to drive screws in tight spaces, count on the 90° Pocket-Hole Driver to get the job done.

Part #	Description	Price
KR-DR90	Kreg 90° Pocket-Hole Driver	$24.00

C

Kreg® Foreman Pocket Hole Machine™ D

A Professional-Grade Pocket-Hole Machine at a Consumer-Friendly Price

The new Kreg® Foreman machine is one sweet deal. One pull of the handle starts the motor, clamps your work piece, and drills perfect pocket holes. It can't get any easier than that. Markings on the large (14" x 23-½") cast-aluminum table make it easy to position the fence for precise pocket depths using materials from ½" to 1-½" thick. Two spring loaded stops make repeat cuts fast and accurate. A Kreg® 3/8" step-drill bit (KR-0395) is included. If you want to do larger pocket holes in 2X material, change to the Heavy Duty Step Bit (KR-0405). The machine weighs only 20 lbs. and runs on 110V AC current. A built in storage tray keeps all your attachments and screws organized while a dust collection attachment can keep your workbench free of debris. It measures 15" H x 19" L x 29.5" D. It includes: **1** Kreg® Foreman Pocket Hole Machine, an adjustable fence with spring loaded stops, a dust collection attachment, a Kreg® stepped drill bit and drill guide, a drill bit setting block, and an Owner's Manual. Imported.

Part #	Description	Price
KR-5210	Kreg Foreman Pocket-Hole Machine	$399.00
KR-0395	3/8 Step Bit for ½ to 1-½ Material	$54.99
KR-0405	3/8 Step Bit for 2X Material	$54.99
KR-0404	Kreg Foreman HD (Heavy-Duty) Drill Bit	$34.99

D

Kreg® Univeral Duallocking Casters E

Kreg® thought of your need for mobility when designing their stands to work with these heavy duty, 3" dual locking casters. The dual locking mechanism prevents your table from pivoting or rolling, either of which can upset your delicate work set-up if you're not expecting it. A simple foot activated switch controls the locking so you can switch between stationary and mobile modes whenever you're ready. Kreg® tables have 150 lbs. capacity with threaded bolts ½-13 x 1-3/8. Imported.

Part #	Description	Price
KRT-3090	Kreg® 3" Dual-locking Caster	$69.99

E

Kreg® Hardware Organizer F

Kreg® helps you get your workbench organized with a transparent lid on your storage container (KTC-25) that holds up to 14 small or large screw containers. Well, you could hold other things but McFeely's is partial to screws. The containers are available in two sizes small (3" wide x 4-¼" tall x 1-7/8" deep (KR-0125) and large (4-¼" wide x 6-¼" tall x 1-7/8" deep (KR-0150). Using a dry erase marker, you can write on the locking lid so you know what is in each container. The containers also fit into the KTC-55 which holds your jigs as well. Containers are sold in packs of 4. Imported.

Part #	Description	Price
KR-0125	Kreg Small Hardware Containers	$7.99
KR-0150	Kreg Large Hardware Containers	$10.99

Kreg® Jig HD® A

The Kreg® Jig HD rounds out the portable jig offerings from the Kreg® Tool Company. Made of glass-filled nylon for dimensional stability, all jigs are highly durable. A manufacturer's lifetime warranty backs steel guides. So Kreg has you covered whether you are a novice, drilling only a few small holes, or going to heavy-duty and production projects. This HD pocket hole jig allows you to assemble bigger projects like outdoor furniture, fences, guard rails, and trellises. The concept is the same, but the Jig HD drills ½" holes "or bigger, #14, and longer screws, 2-½," to acc"moderate the beefier projects using materials that are 1-½" and the"sticker. You can take the jig on the job or slide it into the benchtop base that also works on the K3 and K4 jigs. The guide block has two drill guides and works with the Kreg® Jig and Kreg® Jig Master System setup.

McFeely's

KREG® POCKET-HOLE JIGS

Build Pocket Hole Projects Faster Than Ever E

The Pocket Hole Jig 720 is the latest innovation in pocket hole joinery, and it's the premium choice for project builders who want to build smarter and faster than ever. This jig was engineered to take your wood projects to the next level with features like one-motion Automaxx clamping, which automatically clamps and sets the material thickness setting for pieces ½ "to 1-½" thick. The Pocket Hole Jig 720 is the base model of the 700-Series and does not include the Docking Station or Pocket Hole Jig Clamp. Work more efficiently using Automaxx one-motion clamping. The clamp automatically adjusts for materials 12" to 112" thick. Just press the handle, and the jig will do the rest. Hold material securely in place for worry-free clamping with GripMaxx anti-slip. Eliminate mess using the chip ejection port that connects to your shop vacuum. Work confidently with a sturdy, long-lasting jig that features a steel-reinforced spine. Keep driver and drill bits close at hand with on-board storage. **Features:** Hardened steel drill guides with a lifetime warranty; Clamping pressure adjustment; Accepts Plug Cutter and Micro Drill Guide Blocks - sold separately. It also includes 60 Kreg® pocket hole screws and project plan; Easy set drill bit-6" and driver bits-3" and 6", Material thickness gauge; Dust collection attachment.

KR-920	NEW	Kreg Pocket-Hole Jig XL	$59.00

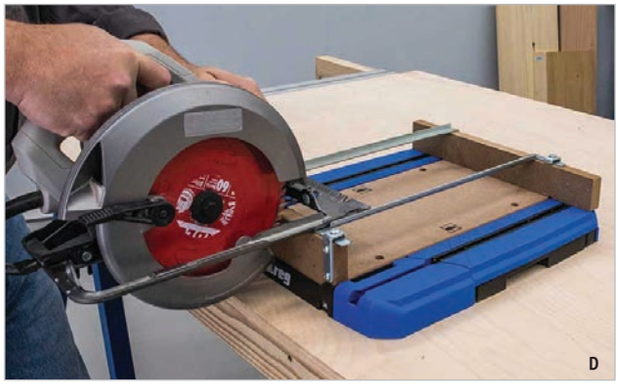

McFeely's® Pocket-Hole Drill Bit C

Create compact pocket holes with 200-Series, 500-Series and 700-Series Pocket-Hole Jigs

The Easy-Set Micro-Pocket™ Drill Bit with Stop Collar & Material Thickness Gauge is designed for use with the Kreg® Pocket-Hole Jig Micro and Micro-Pocket™ Drill Guide Kits (KPHA530 and KPHA730) to create 33% smaller pocket holes using 500-Series and 700-Series Pocket-Hole Jigs.

- Use this drill bit set with a Kreg® Micro-Pocket™ drill guide or the Kreg® Pocket-Hole Jig Micro to make 33% smaller pocket holes
- For use with the Kreg® Pocket-Hole Jig Micro (KPHJ230) and Micro-Pocket™ Drill Guide Kits (KPHA530 and KPHA730)
- Works with ½" (12mm) stock and narrow stock, down to 1" (25mm) wide
- Bit size is 19/64"
- Stepped drill bits for use with pan-head pocket-hole screws
- Faster, easier drill strokes because the bit removes less material

Part #	Description	Price
SSD-0375		$26.92
KR-0330		$6.49
KR-0308	Kreg Easy-Set 3/8" Stepped Pocket-Hole Drill with Stop Collar, Gauge/Wrench	$18.99
KR-908	Kreg XL Drill Bit	$19.99

Kreg® Crosscut Station D

Get Miter Saw Quality from Your Circular Saw

The Crosscut Station delivers the capabilities of a miter saw with just a circular saw and the precision of guided cutting. It cuts crosscut boards wider than most compound miter saws can handle (up to 12" at 90°) and makes a variety of miter cuts from 0° to 45°.

- Use a circular saw to get high-quality crosscuts up to 12 in. wide.
- Cut miters from 0°- 45° with the Adjustable Fence and molded-in angle alignments.
- See exactly where your saw will cut with a kerf line you cut into the MDF base.
- Get splinter-free cuts thanks to an MDF base and the Sure-Cut™ backboard that act as a sacrificial surface.
- Cut long pieces safely with material support wings and infinitely repositionable blocks.
- Works with left or right blade circular saws
- Material Hold-Down Clamps hold securely.
- Anti-slip feet prevent the guide from slipping.
- Compact design sets up quickly, stores easily.

Includes:

- Crosscut Station with Guide Rails
- Built-in Material Hold-Down Clamps
- Adjustable Fence

Kreg® 520PRO Pocket-Hole Jig F

Build Pocket-Hole Projects Anytime, Anywhere

The new Pocket Hole Jig 520PRO is essential for project builders who need an easy to use jig wherever they work: in the backyard, on the driveway, or even in a friend's garage. This jig, which includes a 51 mm (2") clamp for assembly, was created to get the most out of your work with adaptive features you can adjust to suit any project.
Clamping is more intuitive than ever with VersaGrip™. Squeeze the handle until your ½ in. to 1-½ in. thick material is securely clamped. Also rotates 360 degrees to suit any building setup.

KR-520PRO	Kreg 520PRO Pocket-Hole Jig	$99.00

Kreg Pocket-Hole Plug Cutters G

The Custom Plug Cutting Bit works with the Custom Plug Cutter Drill Guide Kit to create plugs that perfectly match your project. This specially designed bit chucks into any drill, and fits into the hardened-steel drill guide in the Plug Cutter to produce plugs in the correct diameter to fit Kreg Jig® pocket holes.

Part #	Description	Price
KR-1020	Kreg Pocket-Hole Plug Cutters - Standard Size Jig	$59.99
KR-1040	Kreg Pocket-Hole Plug Cutters - Micro Size Jig	$59.99
KR-1060	Kreg Pocket-Hole Plug Cutting Bit - for HD Sized Pocket Holes	$59.99

Kreg Drilling Guide H

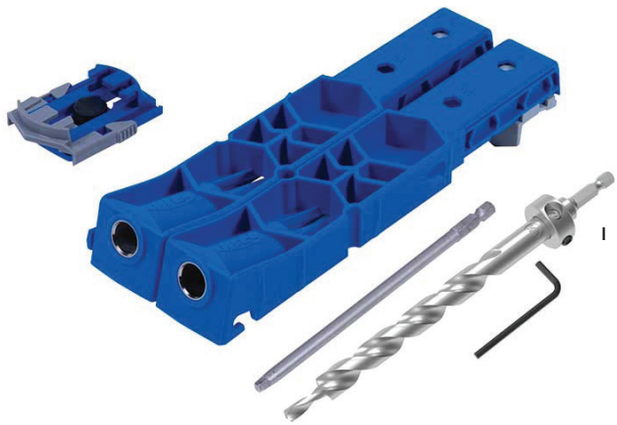

The Kreg Drilling Guide makes it easy to create perfectly straight holes without using a drill press. You can get precisely positioned holes with just a hand drill. Featuring six hardened steel drill guides—from 1/8" to ½"—that do the work of holding your drill in position for you. The Guide features an ergonomic design and Kreg GripMaxx™ material that ensure it stays in place as you use it, so your drill bit won't wander off your mark as you start the hole. The Drilling Guide also automatically centers on the edge of ¾"-wide and ½"-wide boards and plywood, so you can drill holes that are perpendicular to the edge and perfectly centered. Use the Drill Guide for all kinds of tasks – whether you need a hole for driving a screw, mounting hardware, helping create a dowel joint, and much more.

Drill Doctor® A

Never use a dull bit again!

Are you tired of working harder than your drill? Are you tired of leaving burn marks on your wood from drilling too slow and heating up the bit? Then leave the drudgery behind by putting a brand new edge on all those old drill bits lying around your shop. The versatile Drill Doctor 500 X sharpens your dull drill bits from 3/32" to ½" dia. (English, metric and letter sizes) and both 118°- and 135°-point angles. An optional chuck allows you to sharpen bits up to ¾" dia. You can sharpen high-speed steel jobber bits, carbide-tipped bits, masonry bits, cobalt and titanium drill bits. You can even add a split point to any drill bit to increase your drilling speed by back cutting the cutting edge of the bit. One-piece alignment improves the precision of the ground angles. Longer jaws with guides hold the bits more securely so that even the smallest do not twist during sharpening. The Drill Doctor 500 X has a cast-aluminum shuttle for durability and comes with an instructional DVD.

Part #	Description	Price
158374	Drill Doctor 500 X	$109.95
DD-2100	3/32" to ½" Chuck	$19.95
DD-0100	3/32" to ¾" Chuck	$34.95

DD-1325	Diamond Wheel – 100 grit	$19.95
DD-2105	Left-Hand Chuck	$34.95

Knife Sharpener B

The company that makes the Drill Doctor® has made knife sharpening so easy, even you can get professional results. It sharpens knives even serrated ones! Got lawn mower blades that shred your lawn more than cut it? The knife and tool sharpener guide cuts kitchen knives at a 20° bevel, while the outdoor guide provides a 25° bevel. The patented belt technology conforms to the shape of any blade, even a hunting knife with a gut hook. Imported.

Part #	Description	Price
176956	Replacement Belt Kit	$12.95

Work Sharp Guided Sharpening System C

The bench top knife, tool sharpening, honing system with built in angle guides. The Work Sharp Guided Sharpening System is a complete sharpening solution for every knife you own. It features the innovative Pivot-Response System which allows the abrasive to follow the curve of the blade ndash; making manual sharpening faster, easier and more precise than ever.

Sharpens Virtually all blades including ccurved, straight, and serated blades. Can also sharpen tools, hooks and points

Part #	Description	Price
WS-3500	Work Sharp Guided Sharpening System	$59.95

Drill Doctor 750X D

The top of the line 750X sharpens drill bits from 3/32 to ¾. Point angles can be set anywhere from 115 to 140 degrees. Adjustable material take-off allows you to adjust the amount of material removed during sharpening - extending the life of your bits. The 750X is built to stand up to professional use.

Designed, engineered, and assembled in the U.S.

Part #	Description	Price
DD-750X	Drill Doctor 750X	$159.95

Pivot Knife Sharpener E

This simple 2 step sharpener quickly and easily sharpens and hones any knife to like new results in seconds. The 25° Convex-Carbide® sharpening blades quickly restore a sharp edge; while the fine grit ceramic rods hone the blade back to a refined edge. Additional 320 grit diamond sharpening surface is ideal for touching up knives, tools and even fishhooks. Compact size easily stows in your pack, pocket, tool or tackle box.

MEASURING & MARKING

FastCap® Tape Measures

A full line of tape measures

Whether you prefer metric or standard, R-to-L or L-to-R, flatback or story tape, FastCap has the perfect tape to fit your needs. Choose from the old standby 16' and 25' standard measuring tapes. Don't want to convert to metric anymore? Metric/standard tapes are available in 12', 16', and 25', too! If you sometimes read right-to-left and sometimes left-to-right, then a reverse tape measure would be convenient. They're easy to read from either side and come in 5m metric and 16' and 25' standard. Reverse True 32 metric has markings every 32 mm for you cabinetmakers. In addition, there's the Pro Carpenter with auto-lock and the Story Pole for those who like to write on your measure. There's also a flatback for those irritated by a curved blade that is difficult to read and mark accurately. Each tape measure has a rugged, compact casing with a built-in pencil sharpener and a lever action belt clip. Blades are 1" W (except FSC-4032, which is 5/8") and have high-contrast marking visibility and dual-locking systems. The side of each tape measure case has an erasable notepad. Imported.

Part #	Description	Length	Price
FSC-4030 A	Standard Tape	16 ft.	$11.65
FSC-4031 B		25 ft.	$16.04

FSC-6035 O	Flatback Standard Tape	16 ft.	$11.65

FastCap® Square N Tape P

Turn your tape into a builder's square

Don't stop your work to reach for your square. Now, you have one attached to your tape measure. The base is 3 in. W for double stud layout; there are marks for 1-½ in. single studs; 22.5°, 45° and 90° markings; and notches of 1-½ in. and 3-½ in. for ripping boards down to 2x2s and 2x4s. There is even an erasable notepad to write down dimensions you don't want to forget. It's all in bright yellow, so you can read the markings easier. It is attached with a self-adhesive patch to most 16 ft or 25 ft tape measures with 3 in. x 3 in. or smaller dimensions. Available separately or already connected to an FSC-4031 FastCap Tape Measure. It may also be used as a small individual square and easily fits into a pocket.

Part #	Description	Price
FSC-4028	Square N Tape	$9.59
FSC-4029	Square N Tape with FSC-4031	$9.59

Komelon® Tape Measures Q

Don't you hate it when you pull out the tape to measure, and before you get a chance to read it, it slides back into the case? Komelon® has solved your dilemma. There is no need to slide the lock button to maintain the blade position. The patented self-lock feature keeps the blade at whatever length you pull out until you hit the retract button. The Big John comes in a petite (relatively speaking) case for its 35' L. Sorry, there is no self-lock on this big boy, but the blade is nylon-coated for corrosion resistance. Imported.

Part #	Description	Price
KM-535C	35' x 1" Big John Tape Measure	$19.62

McFeely's 25 ft. x 1 in. Imperial Scale Locking Tape Measure R

This tape measure is rugged and tough, just like McFeely's Screws and Fasteners.
Features:

- 25 feet long
- Easy Grip Rubber jacket
- Thick High Carbon Steel Blade
- 7.5 foot minimum blade extension.
- Triple Riveted End Hook with Bottom Blade Protector
- Belt Clip

Part #	Description	Price
MCF-TAPE	McFeely's Tape Measure	$11.99

Pricing is subject to change at any time due to market fluctuations.

McFeely's
Professional Grade. Professional Results.

Magneto® Magnetic Tape Holder S

Never lose your tape measure again!

This ingenious holder clips to your belt like a tape measure. An adapter plate you install on your tape measure with just a screwdriver then holds the tape to the belt clip with a powerful magnet. Simply snap the tape on or off the belt clip when you need it. Like magic, no more lost tapes! Tape holder includes adapter plate and belt clip.

Part #	Description	Price
MH-0001	Magneto™ Tape Holder	$16.80

S

FastCap® SpeedClip T

Hold your tape measure, sharpen your pencil!

Tape measures can destroy a pants pocket before the credit card bill is due, if you are not careful. FastCap's® SpeedClip hooks onto your belt and provides a rigid slot for the clip on the tape, as well as a pencil sharpener and pencil holder. Best of all, these are inexpensive enough to give to all your friends! Imported.

Part #	Description	Price
FSC-4026	FastCap SpeedClip (Each)	$2.40

T

FastCap® Long-Nosed Pattern Marker U

Any woodworker will tell you that accuracy begins with measuring and marking. Without it, you'll never have the pattern quality you demand in your projects. The long-nosed marker has a 1-1/8"L tip and a fine tip for exact placement. You can easily get into corners and up tight against the marking edge for cut lines. The opposite end of the marker has a wide tip for markings that needs to be highly visible from a distance. In other words, you have the best of both worlds in one tool! Imported.

Part #	Description	Price
FSC-6017	Long-Nosed Pattern Marker	$7.33

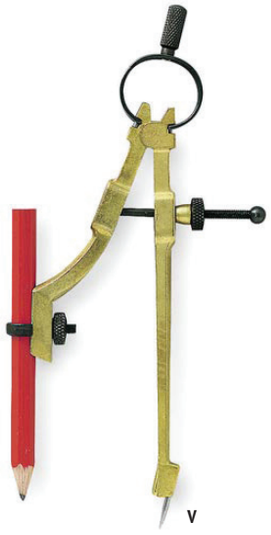

U

General® Precision Pencil Compass V

Carpenter-quality precision

Remember learning how to draw a perfect circle using a compass in grade school? Yeah... so do we. These precise, quality compasses are made of long-lasting, die-cast, rust-resistant metal and boast a spring tension adjustment for marking up to 9" (229mm) diameters. Includes scribe guide for edge marking. Can be used with pencil (included) or slim ballpoint pen. Imported.

Part #	Description	Price
GT-0842	Precision Pencil Compass	$11.05

V

FastCap® FatBoy Pencil

Unique design is a cross between a carpenter's pencil and a mechanical pencil. It's easy to sharpen and stays sharp longer. Lead sharpens in a standard pencil sharpener and then retracts inside the housing for safe storage. Great for framing and finish work. Pencil comes with three leads and eraser in screw-off cap. Refill comes with five leads and three erasers. Imported.

MEASURING & MARKING

A

FastCap® Magnetic Micro Square A

Imperial on one side, metric on the other

The FastCap® Micro Square magnetically attaches to any convenient ferrous metal surface, so it's always handy to square up your miter saw, table saw or band saw. The precision ground, machinist-style square has two neodymium magnets embedded in the oversized base. The scale provides an outside scale to 4" and an inside scale to 3-¾" for layouts. It has imperial measurements on one side and metric on the other. Imported.

Part #	Description	Price
FSC-6018	Magnetic Micro Square	$29.28

B

General® Heavy-Duty Stainless Steel Calipers B

Measure twice and cut once!

Did you hate fractions in grade school? This caliper will take away that pain. The three-mode display converts from decimal or fraction, imperial or metric and back. It performs inside and outside measurements and has a free-wheeling roller to advance and retract the slide. Made from stainless steel. A convenient auto-off feature will conserve the SR44 1.5V battery. A flashing display warns you when the battery is low. The calipers are accurate with a tolerance of ±0.001" (±0.02mm). Battery and screwdriver for the battery compartment are included, as well as a foam padded case. Imported.

Part #	Description	Price
GT-0147	6" Digital Caliper	$42.49
GT-1478	8" Digital Caliper	$55.30
GT-1471	12" Digital Caliper	$90.22

C

FastCap® AccuScribe Pro C

Perfect scribes every time - and more!

Scribing is the secret to getting nice tight joints wherever odd shapes or uneven surfaces meet. Scribing done with a dime-store compass, or a block of wood and pencil, yields results that are often less than satisfactory.
AccuScribe Pro makes it easy to maintain a consistent scribe offset due to the wide, flat back and articulating pencil holder. The adjustable head even allows you to scribe the back of molding and trim! But, as they say on TV, there's more: insert a compass pin into the tip and AccuScribe Pro can draw up to 24"-dia. circles (using a long pencil). Use the marking gauge lip to layout cut lines, or use the built-in sharpener to get a nice point on your pencil. Imported.

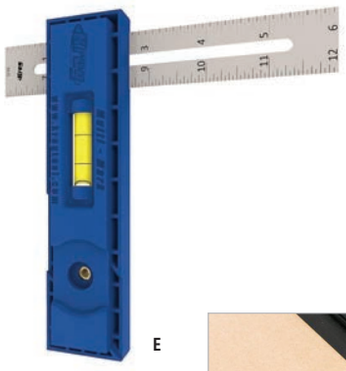

Part #	Description	Price
FSC-0045	FastCap AccuScribe Pro	$23.96

D

Trend Digital Depth Gauge D

Digital depth gauge for router tables and saw benches. Horizontal and vertical measuring. For hand routers, router tables and saw benches. LCD readout for mm, imperial and fractions with auto shut off 5 mins. Removable pin to allow hole depths to be measured. Pin can be parked on arm. Hole depth 2 inch. Self standing with magnetic feet and flat back. Injection plastic moulding with plastic rule. Read-out has relative co-ordinate and absolute function. 2-3/8 inch wide aperture.

Part #	Description	Price

Trend Complete Flat Lying Trammel Set K

The only flat lying compass in the world. Self supporting, giving more stability and control, reducing margin for error. Solves the problem found with traditional compasses and trammels which have high centre of gravity, and are therefore unstable and entirely dependend on the operator for their position. Fits any steel or aluminum rule from 6 inch (152mm) upwards with blade width less than 1 31/32 inch (not supplied). Unrivalled marking, mortise and panel gauge with greater range to mark deeper into the board. High tolerance scribing and cutting gauge. Includes hyper fine snap off dispensable blade. Scribes high tolerance parallel or curved lines.

Part #	Description	Price

Milescraft Depth Gauge D

Use the Milescraft® DepthGauge™ to quickly and accurately locate, measure, and mark blade and bit heights, or fence offsets.

Features:

- Durable metal scale measures in inches or millimeters
- Metal locking knob
- Wide base with sturdy feet
- Straddles most table saw throats for measuring while adjusting
- Self-standing – Allows a depth to be set while bringing the blade or bit up to the desired level

McFeely's

General® Sliding Digital T-Bevel E

It's a sliding T-bevel gauge, no it's a protractor – wait – it's actually two tools in one. There's a large digital readout and an 8" stainless steel blade. It reads from 0° – 360° and has a .05° resolution. It has a reverse display button, flip display button and a locking knob for manual measurement transfers. The handle is impact resistant ABS and it runs on one CR2032 3V Li-ion battery, which is included. An auto shutoff function saves your battery for you. Imported.

Part #	Description	Price
GT-828	Sliding Digital T-Bevel	$43.84

E

General® Noninvasive Moisture Meter F

For most accurate joints, it's best to start with dry, stable wood. A pinless moisture meter is the best way to ensure the moisture content without leaving a tell-tale mark in your work piece. The GT-MMD5NP has a large display for easy reading (digits are 10mm high) and intuitive on-screen icons for low/medium/high moisture content to a depth of ¾" (20mm). The measuring accuracy is ± 3%/0.1%. There is an auto-turn-off feature after 4 minutes of non-use to save your battery when you forget and an audible warning when the battery is low or very low. It operates within a 32° to 122°F range in environments of less than 80% humidity. It is auto-calibrating and runs on only one 9V battery, which is included along with a user's manual. Imported.

Part #	Description	Price
GT-MMD5NP	Noninvasive Moisture Meter	$65.88

F

General® 6" Contour Gauge G

Make perfect contour patterns

This is the ideal tool for anyone working with wood or installing flooring. Throw away the paper patterns you tried to make to fit the door casing or fancy baseboard molding when you laid the vinyl flooring. Now you can push these ultra-thin 304 stainless steel pins up against the protrusion and take the identical pattern to the substrate that needs to be cut. Copy the exact pattern, cut and return with a perfect fit. The stainless steel pins are held in place with a pressure fit. The gauge is capable of duplicating a pattern up to 3-½" deep. All the parts of this gauge are enamel painted or brass plated, so it's rust resistant and will last for years. There are inch graduations marked on the body. The gauge measures 6" x 3-½." Overall travel is 5-¼."

Part #	Description	Price
GT-4116	6" Contour Gauge	$12.16

G

Picture Level H

Levels both horizontal and vertical at the same time

It doesn't have to be a picture you want level, maybe a refrigerator, or countertop and yes even a picture frame. Just put this molded-plastic level on the corner, and read plumb and level simultaneously with the dual vials. Housing will not mar or scratch painted or wood surfaces. It's a great stocking stuffer at Christmas time! Imported.

Part #	Description	Price
JL-118	Picture Perfect Level	$6.95

H

General® Moisture Meter I

Check the moisture content in your wood before you start your project

Know before you start that your wood is dry enough for gluing, painting or staining. This General Moisture Meter has a three-digit, 10mm LCD display and measures from 8 to 30% with 0.1% resolution and accuracy of ±2%. It runs on a single 9V battery (user supplied) and has a built-in low battery indicator. It's small enough to fit in a pocket at 5.7" x 2.4" x 1.2" and weighs only 4.4 oz. It has an operating range from 32° to 122°F in less than 90% relative humidity. It comes with a protective ABS plastic "snap cap" cover to protect the 3/8" (non-replaceable) probes when not in use. Imported.

FastCap® Reveal Square A

The all-in-one tool gives you eight different reveal dimensions for door and window moldings. Reveals include: 1/8," ¼." ½," 3/8," 3/16," 5/16," 7/16", and 9/16".

Part #	Description	Price
FSC-9026	Reveal Square	$8.72

5" Pocket Level B

A handy little device to keep in your pocket

This 5" pocket level travels with you and clips to the edge of your pocket. Just in case it slips out or you happen to drop it. This level has a durable acrylic vial and a high-impact body. The body also has V-grooves so that it conveniently fits on pipe and conduit. Features a strong magnet on the tip to pick up small objects.

Part #	Description	Price
JL-500	5" Pocket Level	$3.95

Combination Squares

Marked with permanently stamped graduations

Machined heads provide greater accuracy in these heavy-duty combination squares. The cast zinc heads are electronically coated with a black chip-resistant finish to prevent corrosion. The steel blades have permanently stamped graduations in both English and metric for JL-406EM and JL-420EM. JL-406EM has graduations of 1/8," 1/16" and 1/32," while the JL-420EM has 1/8" and 1/16". The JL-400 has English-only graduations in 1/8," 1/16" and 1/32". For durability, these combination squares feature a hardened screw-in scriber that won't fall out and a reversible head with a lock bolt and steel screw. The level vial is made from durable acrylic, a tool with big results. Structo-Cast® combination square gives you the accuracy and precision you need for every job. It features a durable acrylic vial, and a heavy-duty Structo-Cast® molded reversible head.

Part #	Description	Price
JL-406EM C	6" Combination Square	$16.93
JL-400 D	12" Combination Square	$17.48
JL-420EM E	16" Combination Square	$26.59
JL-415EM F	12 in. Combination Square with Structo-Cast Head	$9.39

Torpedo Levels G

Top-read window for easy viewing

A robust magnetic edge holds these torpedo levels to any ferrous metal surface. The solid 9" aluminum frames are JobSite Tough™. V-grooves on the frames fit the curvature of the pipe and conduit, making it easier to get them level. The SurroundView® vial enhances readability, with three vials to read plumb, level, and 45° angles. Model JL-5500M-GLO has the patented Glo-View® vial, which improves readability in low light. The Glo-View can be recharged in natural sunlight or with electric and battery light sources. Model JL-7500 high-impact molded frame is durable, non-conductive, and non-corrosive, making it a must-have for electrical purposes. The level's V-groove frame also fits easily on pipe and conduit. Model JL-40-6184 magnetic torpedo laser level offers precision, versatility, and durability with four vials that read plumb, level, 45°, and cross-check and three simultaneous 90° laser beams for level, plumb, and square reference points.

Part #	Description	Price
JL-4500M	9" Torpedo Level	$8.95
JL-7500	9 in. Orange Torpedo Level	$5.58
JL-40-6184	Three-Beam Magnetic Torpedo Laser Level	$159.95

Post Level H

Make sure your fence posts are straight and true

Strap this level to the corner of your post, pole, or stringer with the rubber strap, leaving your hands free to adjust as needed. The durable molded body and rugged acrylic vials read plumb and level simultaneously. A reflective backing increases the vial visibility.

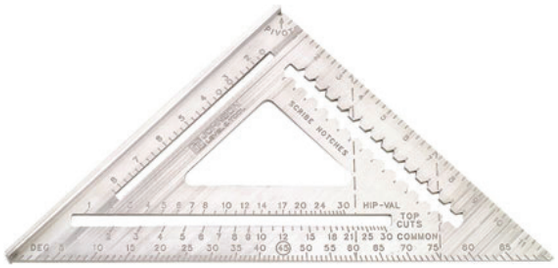

Part #	Description	Price
JL-175-O	Three-Vial Post Level	$9.89

Pricing is subject to change at any time due to market fluctuations.

Square Rafter Angle I

The 12" body of this Square Rafter Angle spans wider boards, making layouts and measurements easier. Permanent graduated numbers on the aluminum body that won't wear away with time and a low-glare, protective powder coated finish make it easier to read. Scribe notches starting at 1-¾" transfer outside increments from pivot point. The thick edge is useful as a saw guide. Standard equipment includes a complete instruction manual with rafter tables.
Structo-Cast® molded frame that is both lightweight and durable, as well as permanent molded graduations for making quick and easy measurements. This rafter square comes with handy markers that measure 2x4 board dimensions of 1-½", 3" and 3-½". And you'll always find this square quickly in your toolbox thanks to its fluorescent, easy-to-see color.

Part #	Description	Price
JL-RAS120	Square Rafter Angle	$23.95
JL-RAS-70B	7" Structo-Cast® Rafter Square	$5.45

I

16" x 24" Framing Squares J

The Easy-Read Square has a permanently thermal-bonded numbers are easy to read on this 1/8"-thick steel framing square. Coated for low glare and rust resistance, it's marked in 1/10," 1/12," 1/16" graduations for Rafter and Essex Board measurements. Built ruggedly for professional use.
The Aluminum Framing Square features rafter and essex board measures, as well as permanently stamped yellow numbers and graduations that are easy to see. Aluminum construction with black anodized finish will not rust or corrode.
The Carpenter Square has been perfected. Features permanently stamped numbers, 1/8" graduations and a durable clear epoxy anti-rust coating.
The body is 24" x 2," with a 16" x 1-½" tongue, and an over all thickness of 1/8."

Part #	Description	Price

JL-125	Cross-Check Level	$6.21

L

Johnson - Five-Beam Self-Leveling Dot Laser M

Johnson's self-leveling 5-dot laser offers the accuracy and convenience your next project requires. It simultaneously projects 5 self-leveling beams, making it a versatile tool for your jobsite, and it can be rotated 360° when attached to the included multi-functional base that mounts to metal surfaces. Accuracy is never a problem thanks to the design - just spin the laser on its base to quickly validate calibration - no special equipment needed. The laser also features a locking mechanism that protects the inner pendulum during transportation. With the included multi-functional magnetic laser mount, mounting strap, magnetic target, tinted glasses, and soft-sided carrying case, this laser comes equipped with everything you need to get your job up and running.

Part #	Description	Price
JL-40-6680	Five-Beam Self-Leveling Dot Laser	$352.95

FastCap® Saw Hood and Clamp D

Keep sawdust under control and save valuable cleanup time!

FastCap's® ChopShop Saw Hood catches the dust before it blows all over your workspace. The hood also acts as a great shelter for your tools in inclement weather. The Saw Hood was designed for miter saws but can also be used with tile or even lathe saws. Attach the hood to the saw by running the roll pipe of the hood into the accessory holes on the saw. Once attached, the hood unrolls to fall into position. Place some type of receptacle at the base of the hood to collect the dust. Use the tile clamp if your saw does not have accessory holes for mounting. Hood may also be mounted to a table, mounting holes at the base will accept standard wood screws. Made of heavy-duty, water-resistant, commercial-grade nylon. Weighs approximately 13 lbs. Dimensions when set up are 42" W x 31" H x 30" D. Imported.

Part #	Description	Price
156092	FastCap ChopShop Saw Hood	$238.92
156093	FastCap Clamp (Pair)	$29.22

Miter saw and stand not included

D

Adjustable Glides E

Hex nut makes adjustment easy

Leveling up furniture, appliances or even shop equipment is a lot simpler when there is an easy way to make the adjustment (lifting the item a few inches off the floor while trying to spin the glide is not our idea of easy!). This glide has a hex nut built right onto the shaft so the adjustment is a simple matter of using the correct wrench. Available with a 1" x 1" black nylon glide. The glide has 5/16"-18 threaded studs. Imported.

Part #	Description	Price
SHW-1503	1-3/8 Adjustable Glides	$3.25

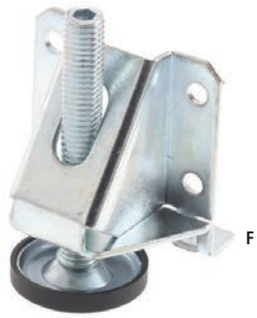

E

Heavy-Duty Leg Adjuster F

Holds 2,000 lb. - ideal for shop use!

Unfortunately, most woodworkers do not have the luxury of a shop with a level floor. This innovative adjustable leg leveler is just the thing to make your shop tools, benches and worktables level without having to use shims. The 3" L x 3/8"-dia. bolt has a hex recess in the end to allow for adjustment under load. The mounting plate measures 2-1/8" W x 2-1/16" H, and the nylon covered foot is approximately 1-¼" dia. Imported.

Part #	Description	Price
SHW-1501	Heavy-Duty Leg Leveler	$7.45

F

FastCap® Super Mag G

Put things in their place!

Are you always working around your design plans? Get them out of the way of your work but close enough to use with the Ultimate Magnet. At 1.7" across and with a 1.5" handle, you can post your plans, parts list, drawings, or pictures of loved ones to any ferrous metal surface. The extra long handle ensures that you can pull these six neodymium magnets away from the metal surface when its time to put them away. Magnets are encased in a soft non-marring plastic to protect your plans and the metal surface.

Part #	Description	Price
FSC-6045	Super Mag	$12.95

G

FastCap® Outlet Stamp H

Accurately marks the back of a cabinet for electrical outlets. Plugs into the outlet and makes four exact marks, outlining the outlet's four corners. Works for both single and double gang boxes. Also marks the outline for the Electrical Trim Ring.

Part #	Description	Price
FSC-2724	Outlet Stamp	$29.22

H

The Cable Wraptor™ I

Are you tired of power-tool cords sprawling all over your shop? Make those unruly cords submit with the Cable Wraptor™ This cable wrap has a large hanghole, T-shaped carrying handle, easy-release trigger, large securing teeth, cable tie looping hole and stainless steel hinge: 2" wrap holds up to 50 lb.; 3" holds 100 lb.; 4" holds up to 150 lb. Red and black. Imported.

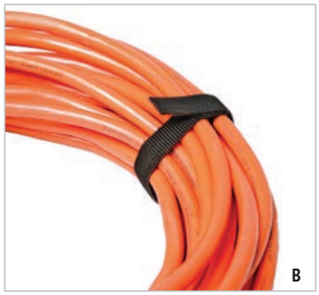

Part #	Description	Price

B

FastCap® Fast Wrap & Holey Wrap

Keep your cords organized. Do you hate how your power cords are always coming loose and sprawling over your workshop or truck? Or maybe you're tired of zip ties that can't be reused. Along with the original Fast Wrap, FastCap offers Holey Wrap – not Holy C#@p. The new version has holes in it so that you can loop the tie around the cord, so you never lose the tie. Cut Holey Wrap to any length you need, depending on the size of cord you are securing. Holes are spaced 5" apart. Both come in 10' rolls. For indoor or outdoor use.

Part #	Description	Price
FSC-9050 A	Holey Wrap	$14.94
FSC-WRAP B	½" x 10' Fast Wrap Roll	$15.22

C

FastCap® Speed Skate C

If you are working with sheet goods, you can't afford to be without the new FastCap Speed Skate. Whether it is drywall, plywood, OSB, doors or windows, you'll be glad to have a helping hand with the Speed Skate. It will handle anything up to 1-¾" wide and 500 pounds in weight. The large wheels are made of tough polyurethane and use ball bearings so the movement is smooth and easy.

Part #	Description	Price
FSC-9125	Speed Skate	$36.53

HTC Machine Cover D

Keep your equipment clean

The plastic coated water resistant, yet breathable cover will keep your equipment under wraps until you need it. There will be no delay having to clean off a miter saw, band saw or table saw before you even get to use it. Magnets are sewn into the corners, so you can keep the cover down snug and prevent airborne debris from entering. The gray tarp is 2'3" x 3' with a 6 mil thickness. Imported.

Part #	Description	Price
213162	Machine-Cover	$25.00

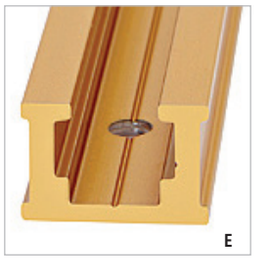

D

Incra T-Track

Designed for 1/4-20 hex nuts

These nifty T-Tracks make jig building easier and allow you to make the jigs you build far more versatile. In fact, it's easy to get carried away and build jigs that are much more versatile than they really need to be! Most T-Tracks require the use of special threaded nuts that slide in the track itself. These Incra T-Tracks accept standard (and readily available) ¼-20 hex nuts (not included).
Two versions of the extruded-aluminum Incra T-Track are available: the single T-Track (A.) and the T-Track Plus (B.). The single T-Track recesses in a ¾" x ½"- deep groove, while the T-Track Plus recesses in a 1-¼" x ½" groove. The T-Track Plus includes an extra channel that accepts an included scale and allows for attachment from the back using ¼-20 fasteners. The standard T-Track is attached from the top with supplied wood screws.

Part #	Description	Price
TDG-0118 E	18" Incra Single T-Track	$11.95
TDG-0136	36" Incra Single T-Track	$18.95
TDG-0218 F	18" Incra T-Track Plus with Scale	$13.95
TDG-0236	36" Incra T-Track Plus with Scale	$20.95

E

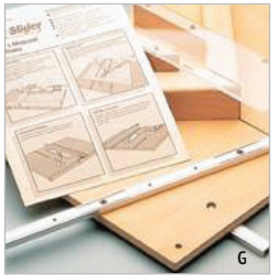

F

Incra Miter Slider G

Aluminum guide overcomes basic flaw

Most table saw cutoff boxes are built using wooden runners and before too long they start getting sloppy from wear. Use these miter sliders instead to make super-accurate cutoff boxes, miter jigs and other specialty fixtures. Each guide bar has a special adjustment mechanism that allows you to fit it to the table saw slot precisely, eliminating all side play. Fits all standard ¾" x 3/8" table saw miter gauge slots. Includes plans for several jigs.

Part #	Description	Price
IM-3718	18" Miter Slider	$23.96
IM-3724	24" Miter Slider	$29.95

G

Pricing is subject to change at any time due to market fluctuations.

McFeely's

Horsehair Bench Brush H

Genuine horsehair counter brush has bristles soft enough to gently dust off a fine finish yet stiff enough to move the sawdust and wood chips that so quickly gather on a workbench. Hang a few around the shop (one near your dust pan is especially nice) and you will be amazed how much more "work" space you have! Overall length is 13-½"; bristle portion measures 9"; bristle exposure is 2-½".

Part #	Description	Price
CB-2802	Bench Brush	$16.92

H

FastCap® Zero Clearance Tape I

After numerous uses, the throat plate on your miter saw gets worn out and chipped. Bring it back and create an exact reference line with FastCap's Zero Clearance Tape. Made from durable PVC. The strips are 2" x 16" and fit any miter saw brand. Just peel and stick it on and cut through with your favorite blade to create a new, clean cut line. Imported.

Part #	Description	Price
FSC-7000	Zero Clearance Tape 2" x 16" (5/pk)	$7.33

I

Parts Bowls

Never lose your parts again. Round 6" or rectangular 14" X 6" X 1-½", these parts containers keep your screws, nuts and other tiny parts contained. A rubber covered magnet keeps the parts tray or bowl firmly attached to a metal workbench, car fender or any other ferrous metal surface without scratching.

Part #	Description	Price

SHOP ESSENTIALS

A

Band Saw Blade Basics

Blade Width: Whether you're cutting curves or ripping and resawing lumber, you'll get the best cut when you use the widest possible blade. But what is the widest possible blade? The table below lists the minimum curve radius each blade size is able to cut.Tooth Style: "Regular" tooth blades are a general-purpose confiration designed for contour sawing and cut-off work. "Skip" tooth blades are designed for resawing and ripping of thick materials. "Hook" tooth blades have extra-wide gullets for rapid cutting of solid hard/ soft woods and multiple layers. Omitting every other tooth lets the blade hold more chips between teeth, resulting in a faster, less demanding cut. Cut quality is reduced, however, since fewer teeth actually make the cut..

Blade Width	1/8"	3/16"	1/4"	3/8"	1/2"	5/8"	3/4"	1"
Curve Radius	3/16"	5/16"	5/8"	1-1/2"	2-1/2"	4"	5-1/2"	7"

How to Install Twist Belts

C

Olson All-Pro™ Band Saw Blades A

New precision ground teeth, super hard edge

Most "hobby" blades are stamped from pre-tempered spring steel that is at its final hardness, so the blade must be relatively thin. That makes it more likely to wander in the cut unless the tension is outrageously high, eventually leading to upper-wheel axle failure. Olson All-Pro PGT blades are precision ground for uniform tooth settings, then induction-hardened to Rc 64-65, so they start sharp and stay sharp longer. The tooth-hardening process leaves the back with the needed flexibility (Rc 45) to avoid early fatigue breakage and the stiffness to maintain a straight cut in thick material. The Hook style tooth provides excellent chip evacuation for faster cutting. The computer-controlled Raker tooth setting results in straighter, more-precise cuts with less waste. The Regular/standard tooth has equally spaced teeth in narrow bands for wood, plastic and non-ferrous metals in general cutting applications. For best results, make sure your saw is tuned up first, or you won't be able to tell how good a blade this really is! An 80" blade fits: All Sears Craftsmen 12" Tilting Table or Tilting Head Band Saws except Models 22412 (91") and 22400 (89-½"). The 82" blade fits: 12" Delta 28-190 and 12" Jet models. The 93-½" blade fits: Most 14" Delta/ Rockwell, Jet, Rikon, Sears Craftsmen, Steel City 50100, Reliant, Enlon, Star, Bridgewood, Woodtek, General. The 105" blade fits: Most 14" band saws with Riser Block Extension such as Delta/ Rockwell, Jet, Rikon, Sears Craftsman, Reliant, Enlon, Star, Bridgewood, Woodtek, General. Check your manual before ordering.

Cord Connector B

Eliminates disruptive disconnects while professionals or do-it-yourselfers work with extension cords or power tools. The latest version of the breakthrough Cord Connect cord lock features a "clamshell" design that enables you to simply close the Cord Connect around each end of the cord, and then twist to lock the cords together. The tapered ends will ensure the Cord Connect pulls smoothly without getting caught. The connection is now also certified as watertight. A new gasket withstands jet nozzle sprays, drip box tests and prevents water from reaching the electrical connection. The gasket, kept in place with the Cord Connect, provides the most economical weather protection product available. It is certified to a watertight rating of IPX1-IPX5. The easy to handle design allows workers wearing heavy gloves to disconnect and to connect easily.

Part #	Description	Price
CC-1000	Cord Connector	$5.49

Power Twist "Vee" Belts C

Still battling vibration in your band or table saw even after rebalancing the wheels, adding ballast, stiffening the frame, and changing the pulleys? Well, the least expensive "fix" is to install a Power Twist belt. It's made of short interlocking sections so it runs truer and transmits less vibration. The interlocking Power Twist link belts make it easy to adjust belt length (no more frantic trips to five stores trying to find the correct belt length). The A/4L ½" size is the most common for woodworking equipment. Typically, table saws use the 48" length, and band saws use the 54" length.

Part #	Description	Price
FPT-0048	Power Twist Plus size A/4L, 48"	$42.23
FPT-0054	Power Twist Plus size A/4L, 54"	$43.41

Pricing is subject to change at any time due to market fluctuations.

Tack Cloth D

Open mesh 18"x36" bleached cheese-cloth is chemically treated to remove dust, dirt and sanding residue. Wipes metal, wood or plaster surfaces clean prior to painting and finishing.

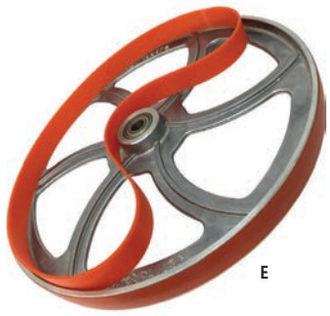

SKU	Name	Price
246487	Tack Cloth, 18 in. x 36 in.	$3.21

D

Urethane Band Saw Tires E

Upgrade your band saw performance by simply changing the tires! Old, hardened rubber tires are likely to have flat spots if you often leave the blade under tension, or the area in contact with the teeth is likely to be abraded, making it difficult to track the blade.
These urethane tires are more durable and won't dry rot. Unlike rubber tires, these urethane tires don't need to be glued. **Installation is simple, but make sure you follow the directions carefully.** Heat the tire in hot soapy water to expand it slightly, then stretch it onto the wheel, let it cool in place for six hours before use. These tires will fit wheels of diameter listed, plus or minus ½". Can be trimmed to size.

Part #	Description	Price
UBT-0010	(2) 10"-dia x 1"W Urethane Tires	$31.70
UBT-0011	(2) 11"-dia x ¾"W Urethane Tires	$31.70

Wedgies™ Shims G

Somewhere in your life is a piece of equipment, a workbench leg, a kitchen table, a window encasement or a door jamb, that is out of plumb. Wedgies® Shims come in soft/flexible vinyl or hard/rigid polypropylene. The soft ones can be trimmed with a knife or scissors; hard ones can hold up to 2,000 lbs. Both are stackable, nonslipping and won't shrink, swell or rot. Standard are 1.92" x 1.15" x .25". Minis are 1.12" x .58" x .16". The large are 3.54" x 2.36" x .48". The assortment contains (8) hard minis; (8) soft minis; (4) hard, large, single-wide; (2) soft, large, single-wide; (5) soft standard; (10) hard standard.

Gift Card H

For those hard to buy Woodworkers in your life. If you are like my mother or my wife who thinks your woodworker has every tool imaginable and why would you need anything else, this is for you! Woodworkers are always looking for the one thing they don't have. Those clamps they need to add to what you think is their already full wall of clamps. What ever it is, with this gift card, they can pick out what they want or think they "need" for their shop. What a great way to give a gift twice. Once when they get the card and once when they receive the item(s) they picked out. You choose the amount and we will send the card.

H

GRASS® DRAWER SLIDES

A

The Kreg® Drawer Slide Jig Assists You In Mounting The Slides Accurately, Consistently And Easily A

It holds the slide in place and can be used on face-frame and frameless cabinet styles. It can be used for ball-bearing, epoxy coated and under-mount slide types. Made from polycarbonate/ABS, it is lightweight yet durable. Use on 12" and longer slides in cabinets that are at least 14" deep. Includes: **2** Brackets, **4** Upper/Lower Sliders – installed and **1** Owner's Manual with complete instructions. Made in USA.

Part #	Description	Price
KT-6644	Kreg Drawer Slide Jig	$32.00

B

Grass® Dynapro 2.0 Undermount Drawer Slides B

Grass has upgraded the Undermount Dynamic NT Full-Extension Slides to their new Dynapro Undermount Drawer Slides. Like the other ones, these mount completely out of sight under the drawer, so the drawer looks like it glides on air. When about three-quarters closed, a hidden hydraulic actuator within the drawer slide gently pulls the drawer the rest of the way closed. A soft-close damper cushions the final movement so there is no "bang" or "thump." Drawer removal is easy, too: simply grasp the green levers under the drawer, squeeze and lift. To reinstall it, slip the drawer back onto the slides and push it closed. Spring loaded catches automatically engage the slides.

With a complete selection of mounting holes on standard 32 mm centers, Grass Dynapro Slides fasten directly to the cabinet walls (5/8" min.) of Euro-style cabinetry. For use in face-frame cabinets, use the face-frame mounting bracket (order separately as "each"). The slides have an 88 lb. dynamic load rating with a 100 lb. static load rating. Use either #6 x 5/8" flat head screws (0605-FPN) or Euro-mounting screws to attach the slides, but use flat head screws only for the mounting bracket. Drawer Slides and Locking Brackets are sold separately in boxes of five pair. The face-frame mounting brackets are sold as "each," and two per drawer are required (i.e. 10 brackets per five pair of drawer slides). Screws are not included; **six** are required for each drawer slide and **four** are required for each bracket. See **McFeelys.com** for technical information. Slides are made in USA or Austria.

Grass® Self-Closing Drawer Slides

Incredibly easy installation, silky-smooth operation

Enhance the quality of your cabinets with these self-closing, full or partial extension drawer slides. Their silky-smooth operation will impress even the most demanding customer, and you will love how easily they install. Unlike many competing slides, these feature a self-closing design that prevents drawer face binding. A tough epoxy coating ensures long, trouble free service. Installation jigs are available to help ensure that each slide is mounted square and parallel. Grass provides a lifetime warranty on each slide against defects in materials or workmanship. Imported.

Part #	Slide Length	Price
1700 Partial-Extension Drawer Slides C		

When drawers don't require full extension to gain access to the complete contents, Grass' partial-extension drawer slides are an ideal solution. With a dynamic load capacity of 100 lbs., they'll hold plenty of silverware, pots and pans, or even file folders. Optional rear-mount brackets (AL-P050) convert the guide for face-frame construction. Slides up to 350mm open to their rated length, less approximately 2-¾"; 400mm slide opens to its rated length, less approximately 3-1/8". Mount with sixteen (16) 5mm Euro screws or #6 x 5/8 Phillips screws per slide pair, purchased separately. Imported.

AL-P300	300 mm (11.8 in.)	$6.73
AL-P350	350 mm (13.8 in.)	$6.73
AL-P600	600 mm (23.6 in.)	$9.69

5300 Full-Extension Drawer Slides D

When you need access to the entire drawer, full extension slides are the way to go. They provide 30mm (about 1-3/16") of overextension, so even an overhanging countertop won't prevent full access. All sizes feature a dynamic load capacity of 125 lb. Nylon drawer stops are provided to help prevent accidental drawer removal. White epoxy coated for exceptional durability and trouble free service. (Sorry, no rear-mounting bracket is available.) Mount with sixteen (16) 5mm Euro screws or #6 x 5/8 Phillips screws per slide pair, purchased separately. Imported.

AL-F300	12 in. (300 mm)	$24.45
AL-F550	22 in. (550 mm)	$30.34
AL-F600	24 in. (600 mm)	$33.60

FastCap® Miller Fast Block™ E

Drawer slide alignment made easy

The FastBlock™ replaces the block of wood at the back of the cabinet that most people use to mount drawer guides. Simply hold the FastBlock™ on the back side of the face frame, adjust the block flush with the edge of the face frame and mount to the back of the drawer guide. You can also use two FastBlocks per side to adjust drawer guides for the pull outs on frameless cabinets too. The FastBlock allows for 3/16" adjustment up and down and 5/8" flat to 1" extended for width. Each FastBlock is made of durable ABS plastic and has a 100 lbs. capacity. Made in China.

Part #	Description	Qty	Price
FSC-6019	Miller Fastblock Bulk	100	$118.46
FSC-6020	2-Piece Miller Fastblock	1	$2.64

E

Milescraft DrawerJig F

Reduce project time and improve accuracy when installing slides and mounting drawers with the Milescraft DrawerJig™. Compatible with frameless or face frame cabinets, this pair of jigs help you mount interior slides accurately, then flips around and provides support for your drawer as you complete the installation.

F

Grass® Full-Extension Ball-Bearing Drawer Slides G

Smooth and quiet, they whisper quality!

If you prefer the smooth operation and slight opening resistance provided by a high-quality ball-bearing drawer slide, you are going to love these! They have a 100-lb. capacity, feature full extension, are only ½" thick and have a convenient fingertip slide release. These slides can be mounted in Euro-style cabinets or in face-frame cabinets using optional rear brackets. They come in a bright zinc finish. Slides mount with #6 truss-head (screws ordered separately.) Discounts are for 10 pair of same part number. Imported.

GRASS® FRAMELESS PANEL HINGES

Grass® Tiomos Concealed Hinges

Like the previous style hinges, the new screw-on Tiomos hinges have three-way adjustabilities – up/down, in/out, and sideways – and quick disconnect. Adjustments can be made independently of one another. Install with full-overlay, half-overlay, or inset doors. Available in soft-close or self-close style. The 110° hinge works for overlays up to 24 mm (15/16"), with optimal reveal on doors up to 24 mm thick. The 160° hinge works for overlays up to 25.4 mm (1") and can be used on doors up to 32 mm (1-¼") thick. Choose the mounting plate based on the door style/overlay required. The cup depth should be 12.6 mm. All components are nickel-plated. Order four screws per hinge-and-mounting-plate combination. Imported.

110° Hinges

Recommended for general cabinetry

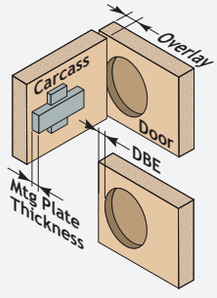

For doors up to 24mm thick

35mm-dia. cup hole

Tech Tip

Choosing Hinges, Drilling The Cup Hole

1. Choose soft-close or standard-close hinge angle and mounting plate based on your door overlay from the chart above.
2. Order four mounting screws total for each hinge/plate combination.
3. Drill a 35mm hole, 5mm from the door edge for Tiomos hinges. For one piece TEC face-frame hinges, drill a hole 2.5mm from the door edge.

Pricing is subject to change at any time due to market fluctuations.

C

SpaceBalls® C

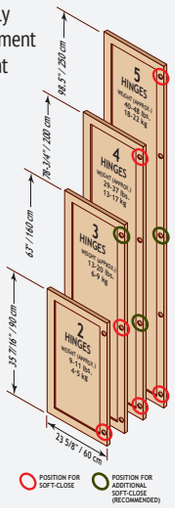

The easy way to "float" a raised panel!

Solid wood panels must "float" inside the rails and stiles to allow for expansion and contraction and prevent future cracking and splitting, however making a panel float isn't easy. For instance: How do you center the panel? What happens when the panel expands and contracts? Use SpaceBalls! Simply insert two to three of the flexible polymer balls into the groove of each side rail and stile. The SpaceBalls will compress to center the door, providing a tight fit, even with expansion and contraction of the panel. SpaceBalls measure .260 for a snug fit in a standard ¼" groove. Allow 3/16" gap per side. Use eight to ten SpaceBalls per door.

Part #	Description	Qty/Pk	Price
PSB-026-K	SpaceBalls	5000	$159.00
PSB-1000-M		1000	$35.00
PSB-1000-C		100	$6.49

Recommended Number Of Hinges To Use On A Door

Most cabinet doors are relatively small, and the standard complement of two hinges provides sufficient support. However, when doors start getting a bit thicker, wider or taller, things get much more complicated. For instance, a pantry door with a full-size can-storage rack on the back needs more than two hinges – but how many more? Well, just take a look at this illustration for the answer! If you are building one of those fancy pantry doors, remember to add in the weight of the cans! (This chart does not apply to soft-close [#MP-SC37], which installs independently of the hinge).

#6 x 5/8 Self-Drilling Screws B

Mount hinges without predrilling!

These screws have sharp, self-drilling points to minimize predrilling. For best alignment, however, use a self-centering bit such as our #MS-5107 (7/64" drill). Phillips drive. Imported.

Part #	Description	Qty/Pk	Price
0605-FPN-MN	#6 x 5/8" Nickel Plated	1000	$24.77
0605-FPN-C		100	$6.53

Institutional Hinges C

These zinc die-cast hinges are nickel plated and tough enough to withstand the rigors of commercial environments. Hospitals, offices, retailers and schools all need hinges that open wider than most kitchen cabinets. Using a full-overlay hinge, these will open the door a considerable 270°. They use a 35 mm hinge cup so bore a 35 mm hole with the center of the hole 12.5 mm (½") from the door edge. The boring pattern is 45/9.5 mm. Recommended for frameless cabinets with 19 mm (¾") side panels. Adjust ±2 mm in height or from side to side. A cover cap conceals mounting screws. Imported.

Part #	Description	Price
MP-3011	(1) Screw-On Hinge Cup	$3.41
MP-2811	(1) Full-Overlay Hinge Arm	$8.30
MP-5125	5mm Euro Screws – Arm Mounting (2 screws per arm & 2 per cup)	$0.10

Grass Institutional Cabinet Door Hinge Kit Faceless (Euro), Self Close, Full Overlay D

Single Hinge Kit

Grass Institutional hinges are made to hold up to the rigors of heavy-duty institutional use. Kit includes all need for each hinge. Order 1 kit for each required hinge. **Features:** Made of zinc die-cast construction for extreme durability; Recommended for side panel thicknesses of 19 mm (¾ in.); Tool-free snap-on mounting - quick and easy installation; Side-to-side adjustment of +/- 2 mm (1/16 in.); Height adjustment of +/- 2 mm (1/16 in.)Hinge Arm Cover conceals mounting screws; Nickel plated; Designed for frameless (Euro) cabinet construction; 270° Opening Range; Meets ANSI/BHMA A156.9 - Grade I requirements. Kit includes these components for each hinge: **1** Hinge Arm with Cover Cap (MP-2811),; **1** Hinge Cup (MP-3011),; **2** Fixing Screws. Also needed but sold separately: three 6 x 5/8" Undercut Flat-Head Screws (0605-FPU-C), sold separately. Imported.

Grass® Tiomos Marking Jig Template B

Utilize the Grass Tiomos Marking Jig template to quickly, accurately, and easily install Tiomos Hinges. It permits easy marking for hinge cup drilling distance of 3-5 mm and as a position guide for straight and wing base plate installation. Imported.

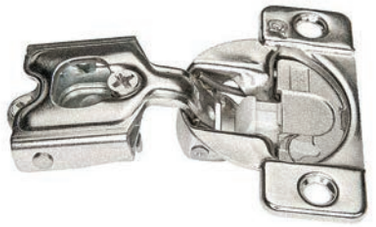

Part #	Description	Price
GA-TIOMOS-JIG	Tiomos Installation Jig	$9.28

Pricing is subject to change at any time due to market fluctuations.

GRASS® FACE-FRAME HINGES

Grass® TEC 864, 108° One-Piece Face-Frame Hinges C

One piece hinges are convenient but generally don't offer much in the way of adjustability. Grass' TEC 864 hinge is different. It has cam side-to-side and depth adjustment, a 108° swing and is now available with built-in soft-close as well as self-closing. Height may be adjusted at the mounting screw. Simply loosen the mounting screw, adjust and re-tighten. The Grass TEC 864 uses a 10 mm deep, 35 mm (1-3/8" approx.) mounting-cup hole, drilled 2.5 mm from the edge of the door. Use two 6 x 5/8" (0605-FPN) Phillips mounting screws to the attach hinge to door. Use one 8 x 5/8" (0805-PSL) pan-head screw to attach the hinge to the frame. Purchase screws separately.

C

Part #	Description	Overlay	Required DBE	Price
MP-AC1808	TEC 864 Hinge	½"	2.5mm	$2.17
MP-4431	TEC 864 w/Soft Close	½"	2.5mm	$4.97

MP-AC1816	ACC 181 Hinge	1-3/8"	2.5mm	$2.38

Grass® Soft Close D

Mounts independently of the hinge

Now you can add soft-close to your kitchen cabinets without having to attach them to the hinges (easy retrofitting!). The UniSoft door closure mounts in the corner and can be adjusted for closing rate with the turn of a Phillips or Pozi Drive screw, or even manually. A brushed nickel-finish plastic blends in well with most existing hardware. It works on face-frame cabinets on all door overlays and with frameless cabinets on full-door overlays. Easy to mount a front bumper cushion to the door for quiet closing. One pan-head 6 x ¾ screw included for each soft-close installation. Imported.

MP-SC37	UniSoft Door Closure	$5.35

Kreg Cabinet Door Mounting Jig E

Get an extra helping hand for installing cabinet doors with the Kreg Cabinet Door Mounting Jig. It makes the job of installing cabinet doors a breeze – whether you're working with face frames or frameless cabinets. It works with both left-hand and right-hand doors.
The jig features a support arm that helps you hold the door with one hand, while your other hand is free to mount the hinges to the cabinet. The Cabinet Door Mounting Jig also allows you to position your cabinet doors precisely. Adjust the support arm to one of the nine different positions to get your doors placed exactly where you want them. There's one setting for inset doors, and eight more at ¼" increments, so you can support doors that overlay the cabinet face up to 2".

FURNITURE-MAKING SUPPLIES

A

Kreg® Concealed Hinge Jig A

Take the guesswork out of installing hinges!

This jig makes it easy to accurately install door hinges economically. Made of virtually indestructible glass-filled nylon plastic, this jig will make short work of any installation or remodeling job. Whether you are a professional using it everyday; or a DIY'er doing only one kitchen, you'll appreciate the built-in scales for accurate, repeatable hole positioning. The scale allows for 3mm, 4mm 5mm and 6mm hinge offset. **Includes:** 1-Jig Base with index cams, 1-Drill Guide, 1-35mm carbide-tipped drill bit, 1-Stop Collar with hex wrench, 1-Owner's Manual with complete instructions. **Note**: 1/16" (1.5mm) drill bit is required for hinge mounting, but not included. Made in USA.

KT-6651	Kreg Concealed Hinge Jig	$32.00
KT-6675	Replacement 35mm Hinge Drill Bit	$19.99

FastCap® Kolbe Korner

Kolbe Korners save you time and frustration when building five-piece Shaker-style drawers. The clips provide a quick and trouble-free means to attach drawer fronts without worrying about drilling through the drawer face. Use them to support the center of the drawer bottom when building Euro-style Shaker drawers to avoid drawer bottom sag. You'll find many more uses for them in the shop as well (attaching tabletops comes to mind). Holes are slotted horizontally in one leg and vertically in the other. Kolbe Korner Polycarbonate 50 pack includes 250 screws, 100 Kolbe Korner FastCaps, and 50 Korners in the selected color. Screws and FastCaps for metal Kolbe Korners sold separately. Imported.

Tabletop Fasteners F

Don't let wood movement surprise you

Ignore the dangers of cross-grain construction and, at best, you'll be explaining big cracks. Tabletop Fasteners are one of the best ways to keep tops attached yet allow for wood movement. Just rip a saw kerf, cut a biscuit slot or rout a 3/32" slot in the apron about ½" in from the edge. Then slip in one leg of the stamped steel clip and fasten the other leg down using a #8 or #10 round washer head screw (order separately).

F

Part #	Description	Qty/Pk	Price
TT-0104-M	Tabletop Fastener	1000	$107.37
TT-0104-C		100	$19.46
TT-0104-D		25	$8.46

Pricing is subject to change at any time due to market fluctuations.

Lazy Susan Bearings G

Spins with light-as-a-feather touch

Put a Lazy Susan on your table, and you won't need to "pass the pepper" again. Low-profile bearings with relatively large load capacities are perfect for a variety of other projects as well. Imagine how easy it would be to stain or spray your next small project if it were on one! Use #6 pan-head screws to mount.

Part #	Size	Center Hole Diameter	Capacity (lb)	Price
LSB-3000	3" Square	1-5/16"	200	$3.22
LSB-4000	4" Square	2-5/32"	300	$4.30
LSB-6000	6" Square	4-11/16"	500	$5.38

G

Selby Table Leg H

You've asked for them, now McFeely's is proud to offer the Table Leg corner brackets to complete your project. Couple these with our Hanger Bolts to assemble your newly made heirloom table. Made from heavy-gauge steel, these brackets provide a means of fastening the legs to the bracket and the bracket to the inside corner of the table. Use wing nuts or hex nuts to complete the connections. See McFeelys' website for hole dimensions. Imported.

Part #	Description	Price
SH-3620	1-½" H x 3" W Table Corner Bracket	$1.75
SH-3621	1-¾" H x 3" W Table Corner Bracket	$1.20

SH-3625	2-½" H x 4-¾" W Table Corner Bracket	$2.25

H

FastCap® Blind Nail Set I

The name says it all

Blind, you just can't see it! Put on molding, drawer fronts and trim without unsightly nail holes that need to be filled, sanded, and, possibly, stained. The tool will set the first half of the nail without dulling the point on the second half. The magnetic tool holds the nail in place while you tap it in. The nail is 3/8" L on one end and 3/16" L on the other end. Tap the longer end into the main piece of wood and the shorter end into the trim piece. Imported.

Part #	Description	Price
FSC-6013	Blind Nails And Set Tool	$27.46
FSC-6014	Blind Nail Set Tool Only	$14.64
FSC-6010	Blind Nail 80-Piece (7/16" x 7/16")	$21.95
FSC-6012	Blind Nail 100-Piece (3/16" x 3/8")	$21.95

I

FastCap® Staple Setter J

Does your staple gun run out of oomph during jobs?

Staples that aren't set flush can be unsightly and dangerous. Things have a tendency to get caught on them, like your skin. Using a hammer alone flattens them out but doesn't really set them below the surface. FastCap has a unique little tool that drives them about 1/16" below the surface with the tap of a hammer. The crown of a ¼" staple fits perfectly into the recess of the setting tool. Imported.

Part #	Description	Price
FSC-6044	Staple Setter	$16.10

J

Shelf Drilling Jig, Self-Centering Bit and Bit Holder K

You won't win any craftsmanship awards just because your shelves don't tip, but you won't even be in the running if they do! That's why this jig is so valuable. It helps you drill precisely spaced holes on 32mm (about 1-5/16") centers. Two sets of stops make it easy to offset the holes consistently from the end or side. For best results, clamp the guide in position. Overall guide length is 23-7/8" with 18 guide holes. The self-centering drill has a special nosepiece that mates with the jig, and the drill uses interchangeable 5 mm and ¼" carbide tipped boring bits or a 7/64" standard bit with an optional adapter. Order the size you need separately.

Part #	Description	Price
EU-3200	32mm Drilling Jig (without bit or holder)	$42.85
EU-2505	Self-Centering Bit Holder	$43.50
EU-0025	¼" Boring Bit (Carbide Tipped)	$18.95
EU-0005	5mm Boring Bit (Carbide Tipped)	$18.05
EU-0004	7/64" Std Bit Adapter	$10.75

FURNITURE-MAKING SUPPLIES

A

Milescraft CabinetMate A

Create sturdy, true cabinet shelfing with the Milescraft® CabinetMate™. This light-weight, easy to use jig allows you to drill up to eleven holes evenly spaced 32mm a part in one setting. Whether creating cabinets from scratch or updating existing cabinets, this jig helps you get the job done fast and accurately. The jig is designed for use with both face-frame and frameless cabinets.

The CabinetMate™ shelf pin jig has a rigid main body, indexing pins, and a self-centering, spring-loaded drill bit. The custom spring-loaded-brad point drill bit allows the holes you drill to self-center with the holes on the main body. This bit is pre-set to bore a crisp hole with consistent depth for a perfect fitting shelf pin. The CabinetMate™ also comes with a built-in closed storage compartment for your bit and indexing pins.

SKU	Name	Price
MCR-1316	CabinetMate	$27.99

Shelf Support Pins

The SH-6100 is a flat type shelf rest with a 7/16" nylon suction cup to keep your glass shelf in place. The others trap the glass (¼" or 3/8") between a "U" shaped metal bracket and the glass is held in place with a rubber tipped nylon screw. The holding bracket is ¾" square. The bracket for ¼" glass is .060" thick metal with a 5 mm diameter pin which is 8 mm long. The bracket for 3/8" thick glass is .080" thick steel with a 6.5 mm (¼") pin which is 8mm long. Imported.

Shelf Supports

Avoid the glint of aluminum by simply boring ¼" or 5mm holes in the cabinet uprights, then inserting these heavy duty shelf supports. Cut a small rabbet on the underside of the shelf and they'll be nearly invisible. Plastic tips help prevent glass shelves from sliding. About 1/16" thick. Clips are ½" W x ¾" L x 5/8" H. Pin is 3/8" L. Imported.

FURNITURE-MAKING SUPPLIES

A

FastCap® Layout Tape A

32mm spacing makes drilling shelf pin holes easy and removes cleanly

Are you tired of measuring and remeasuring holes for adjustable shelves or hinge plates? With their new Layout Tape, FastCap makes drilling hinge plates and 5mm shelf pin holes (32mm apart) easy, fast, and fun (well, almost fun). It comes with 35 mm and 37 mm offset. Lay it down, tape it on, pick your offset, and drill your holes. Now that's fast! Sold in a 60' roll.

Part #	Description	Price
FSC-4039	Layout Tape	$21.95
FSC-6016	SMM Layout Drill Bit	$21.97

B

C

Bed Bolts B

Simple system for sturdy bed frames

This simple system uses threaded inserts and a rod to create a sturdy bed-rail connection. Just drill a 35mm (1-3/8 in.) dia. flat-bottom hole in the bed rail and a 5/8 in. through-hole perpendicular to it for the threaded rod and nut. Bore a 17/32 in. hole for the 5/16-18 threaded insert in the bedpost, centering it between two alignment dowels (not included). To assemble, the bolt is threaded into the insert; the nut is threaded onto the bolt, then the bolt is slipped into the rail. Finally, a curved, slotted washer is slipped behind the nut, and the nut is tightened. Includes inserts, bolts, nuts, curved washers, and a wrench. Imported.

Part #	Description	Price
RCS-0534	Bed Bolt and Inserts (Pair)	$14.48

Align-N-Lock C

Works like a sash lock, only better

Now, you can pull two parts together (two table leaves, for instance), align the surfaces, and lock them in position, all with one draw catch. A U-shaped plate aligns with the catch assembly; the catch securely locks with the mounting plate to prevent separation. They are stamped from 14-ga. Steel, these heavy-duty, yellow zinc plated catches have countersunk mounting holes for #6 flat head screws but may also be used with #8s (order separately).

Part #	Description	Price
TT-0105	Align-N-Lock	$4.46

D

FastCap® Electric Trim Ring D

The finishing touch for professional-looking electrical cutouts

The Electric Trim Ring (ETR) was designed to dress up the outlet access hole cut into the back of a cabinet for a single or double outlet box. The versatile ring can be adjusted for the depth of the cabinet because it is marked in ¼ in. increments for trimming. Outside dimensions are 6-¼ in. W x 6-¼ in. H, inside dimensions, are 3-1/8 in. W x 4-7/8 in. H, and the total depth is 1-¼ in. ETR rings are a standard white or Hardrock Maple.

Part #	Description	Price
FSC-2720	Electric Trim Ring – Single	$5.85
FSC-2721	Electric Trim Ring – Double	$7.33
FSC-2722	Electric Trim Ring – Double Hardrock Maple	$5.85
FSC-2723	Electric Trim Ring – Single Hardrock Maple	$7.33

E

Bed Rail Connectors E

Heavy duty knockdown fasteners

They may be designed to connect bed rails to the bed posts, but we're sure you'll see many other applications. Made with 1/8 in. thick steel bodies, swaged hooks on the bed-rail piece fit through slots in the bedpost plate, locking tighter with increasing weight. Requires six #10 mounting screws per pair; minimum suggested length is 1-½. in. Order the size best suited to your application, but longer is better. The set contains four pairs (enough for a bed). Each is about 6 in. L x 5/8 in. W. Yellow-zinc plated. Imported.

Part #	Description	Price
KDF-6509	Bed-Rail Connector (Pair)	$16.95

F

FastCap® Flip Bolt F

Join countertops without tools!

Getting a really tight countertop joint has never been easier! FastCap's® Flip Bolt doesn't require tools to produce a tight joint and works with standard countertop joint recesses. Just place the Flip-Bolt into the recess, hand tighten the hex nut (you could use a wrench, but why?), then flip the toggle lever down to provide incredible clamping pressure. The toggle is engineered with an over-center cam so that it stays clamped once folded down. Flip-Bolt has 2-¼" of clamping capacity and standard ¼-20 threads. Each clamp pad is roughly 1" L x 5/16" H. Imported.

Part #	Description	Qty	Price
FSC-0020	Flip-Bolt	(1) Each	$1.45
FLIPBOLT-JIG	Template	(1) Each	$14.64

Pricing is subject to change at any time due to market fluctuations.

McFeely's

FastCap® Euro Door Stops G

Use with European and/or inset cabinets to make sure they shut at the same level. It stops the screw right inside your cabinet. You can then rotate to adjust where you want the door to shut. Sold in packs of 10.

Part #	Description	Color	Price
FSC-9020	Euro Door Stop	Brown	$2.05
FSC-9030		White	$2.05
FSC-9034	Euro Door Stop with Screws	Brown	$2.78
FSC-9039		White	$2.78

G

H

FastCap® Drawer Bumper H

Protect doors from drawer slide scars

Pull-out cabinet trays are extremely functional and popular in today's kitchens, entertainment centers and other high-end cabinets. Unfortunately, when the cabinet door is not fully opened, the pull-out tray can scar the back of the cabinet door. These nifty bumpers attach easily to the drawer corner with an adhesive backing or mount using #6 x 5/8" screws. The bumper is made of slick and durable UHMW (Ultra High Molecular Weight) plastic. Imported.

Part #	Description	Qty	Price
FSC-2501	FastCap Drawer Bumper	10 Pack	$16.09
FSC-2502	FastCap #6 x 5/8" Mtg Screw	100 Pack	$15.40

I

Neodymium Latch Magnet Kit I

These powerful magnetic assemblies are designed to be used as door latches for cabinets, chests, displays and more. Simply attach the magnet in the steel cup to one surface and the strike plate to the other to make a secure closure. Counterbore a hole in the wood for flush mounting. Available in 3 sizes with magnetic pull strengths ranging from 2 to 16 pounds. Kit includes steel cup, strike plate, neodymium magnet disc, noise buffer pad and screws.

- Ideal cabinet closures
- Good for use at home, office or garage
- Perfect for any do-it-yourselfer

Part #	Description	Price

MM-7571	.5 in. Dia. 6 Lbs. Max Force	$4.81
MM-7572	.625 in. Dia. 16 Lbs. Max Force	$4.78

Polyurethane Bumpers J

Self-adhesive polyurethane bumpers in a variety of sizes and shapes come in handy around the home, office, workshop and jobsite. Whether you plan to use them on desktop calculators, electronic cabinetry, telephones, keyboards, foot pedals, scales, clocks, lamps, speakers, computers or kitchen and bathroom doors and drawer stops, McFeely's has you covered. Available in cylindrical, square, hemispherical and hexagonal.

Part #	Shape	Size	Color	Qty/Sheet	Price
BS-1450	Cylindrical	.50x.140"	Clear	200	$13.59
BS-1550	Hexagonal	.50x.150"	Clear	200	$13.99
BS-3255	Square	.50x.50x.23	Black	200	$19.53
BS-3385	Hemispherical	.335x.085	Clear	450	$18.79

J

Milescraft HardwareJig K

The Milescraft HardwareJig™ is a simple and accurate way to repeatedly position, drill, and mount cabinet drawer and door hardware. The adjustable design allows you to quickly reconfigure the jig to install knobs, handles, and pulls.

HardwareJig™ Features:

- Metal ruler construction
- Adjustable sliding stops lock in place to align jig and allow repeated positioning on multiple pieces
- Reversible design allows you to transfer jig from left door to right with a simple flip, keeping hardware position locked in
- Three steel 5mm (3/16") bushings create accurate, straight holes and are designed to last
- Centering notches align HardwareJig™ to center marks for perfect placement when installing drawer knobs
- Install pulls and handles from 1-¼" to 10" long

Unfinished Maple Wood

A

FastCap® FastEdge Self-Adhesive Edge Banding A

Peel, apply, burnish, trim - you're done!

This great pressure-sensitive, adhesive-backed edge banding is fast, easy and eliminates the mess associated with unglued and hot-melt backed banding. Simply cut the band to approximate length, peel the backing and stick it in place. Burnish the banding to ensure a good bond, then trim it to size using a router, knife or the FastEdge Trimmer. FastEdge banding uses an acrylic adhesive that increases bond strength as it cures (maximum strength is reached in seven days!). It is totally waterproof and withstands temperatures of –30°F to 250°F. Thickness with adhesive is .023"; without adhesive is .018". Unfinished wood veneers may be stained and finished to match the rest of the workpiece.

Part #	Color	Width	Price
FSC-7100	White	15/16 in.	$25.17
FSC-7103	Almond (FC)	15/16 in.	$25.17
FSC-7170	Folkstone	15/16 in.	$25.17
FSC-7180	Black	15/16 in.	$25.17
FSC-7195	Oak, Natural	15/16 in.	$27.95
FSC-7190	Maple, Hardrock	15/16 in.	$27.95

FSC-7210	Unfinished Maple Wood	15/16 in.	$41.94

B

FastCap® Fast Break and Fast Break XL B

Knock down two edges at once

In just one pass you can sand the sharp edges of melamine, edge banding, plywood or hardwoods with the Fast Break handheld sanding block. These unique sanding blocks are shaped to sand both edges of doors or shelves at the same time, cutting your work in half. You can even store extra sandpaper in the handle! Fast Break handles materials to 1" thickness, while the Fast Break XL handles thicknesses from ¾" to 2-3/8". Fast Break XL requires two pieces of sandpaper, whereas the Fast Break needs only one. Sandpaper is available in 10 packs of 80 grit and 180 grit. Fast Break is imported.

Part #	Description	Price
FSC-7011	Fast Break	$10.25
FSC-7012	Fast Break XL	$21.97
FSC-7013	180-Grit Sandpaper	$5.85
FSC-7014	80-Grit Sandpaper	$5.85

C

FastCap® Flush Cut Trimmers C

You'll want to use this tool every time!

These are the best fingernail trimmers you will ever own! Seriously, they were designed to cut edge banding 0.018 – 0.025" (not recommended for 3 mm) veneers and laminates. They trim flush so you won't even need to sand the edge. It takes off even a silly millimeter at a time if you need. Imported.

Part #	Description	Price
FSC-7004	Flush Cut Trimmers	$21.97

D

FastCap® FastEdge Clamp D

Makes applying edge banding to ¾" shelves a snap! Securely holds shelf in place, making it easy for you to use both hands to install peel-and-stick edge banding.

Part #	Description	Price
FSC-7065	FastEdge Clamp	$14.58

E

FastCap® Quad Trimmer E

Trimming edge banding is quick and easy with the FastCap® Quad Trimmer or Quad Trimmer Pro. Depending on how much you do, get either the Trimmer with the carbon steel blade or step up to the "Pro" model with Tungsten Carbide blades for extras life. Both cut in forward and backward strokes with material up to .018" and does both sides at the same time. Leaves a 30° edge.

Part #	Description	Price
FSC-9130	Quad Trimmer	$29.22
FSC-9135	Quad Pro Trimmer	$58.50
FSC-9131	Quad Trimmer Carbon Blade	$14.64
FSC-9136	Quad Pro Trimmer Tungsten Blade	$38.07

Pricing is subject to change at any time due to market fluctuations.

FastCap® End Nippers F

Flush-cut tricky materials, like edge banding, to 3mm thick!

End Nippers are different from many flush cut trimmers due to their unique shape, which allows them to flush cut edge banding up to 3 mm thick as well as soft metals like brass and copper. Don't use these to cut nails. Save that job for the heavy-duty Flush Cut Pliers (FSC-6032). Nippers cut up to 1" W in a single cut. The handle is covered with textured material for a sure grip. Nipper is 6-¼" L. Imported.

Part #	Description	Price
FSC-6031	End Nippers Trimmers	$21.93

F

FastCap® "Peel and Stick" SpeedTape G

Glue down veneer and edge tape without messy spray adhesives

FastCap's® SpeedTape "peel and stick" adhesive eliminates the need to protect your workspace against overspray, wait for the adhesive to dry or get that sticky goop off your hands and clothing. SpeedTape's permanent adhesive bond strengthens with time. Just roll off a strip of tape, apply it to a clean, dry, oil/dust-free surface, burnish with the FastCap® SpeedRoller, then peel off the backing and position the veneer or veneer edging. Finally, roll the veneer down tight with the SpeedRoller. Seal the veneer or edge tape before applying a surface finish containing solvent.

The FastCap® SpeedRoller Pro has 5/8" dia. rollers that weigh about 1.25 lbs. each for concentrated pressure. Pairs of soft rubber-coated rollers for wood veneers and solid-steel rollers for high-pressure laminates. Other "hard" materials are interchangeable. The SpeedRoller Quad has all 4 rollers already installed. Use rubber wheels for wood edge banding or flip it over and use rubber wheels for PVC edge banding.

Part #	Description	Price
FSC-0150	1" x 50' SpeedTape	$16.10
FSC-6056	1-½" x 50' SpeedTape	$24.17
FSC-0250	2" x 50' SpeedTape	$32.21
FSC-0650	6-½" x 50' SpeedTape	$96.64
FSC-0099	SpeedRollerPro	$48.25
FSC-0098	SpeedRoller-Quad	$48.25

G

Speed Tape

SpeedRoller

Edge Band Roller H

- Squeeze Roller

For Smooth Application of edge banding on flat surfaces. This lever action roller puts pressure on laminate edges to seal them down tight to the substrate. Very useful for correcting the occasional edge-lift problem. The tip roller rides on the underside and the mid roller rides on the upper side to put handle pressure on the edge. The rollers are non-marring firm plastic.

Part #	Description	Price
PR-79	Edge Band roller	$21.95

Edgebanding Iron I

For Smooth Application of edge Banding on flat surfaces. Thermostats adjust surface temperature. Useful for applying preglued edgebanding and for in-the-field repairs, Used for warming plastics and resilient materials to prevent cracking or crazing when making bends. Also handy for heating loose areas or lifted edges to reactivate the adhesive for rebonding. The base is about 1 5/8" x 4".

Part #	Description	Price
PR-165	Edgebanding Iron	$59.99

CAULKING SUPPLIES

A

FastCap® Caulk Tip A

There is nothing more frustrating than coming back to a caulking project to find that the tip is clogged with dried caulk. You know that 80% of what is left inside is still good but how can you get to it? Cut off the existing tip and replace it with FastCap's® new tip! It's so simple, you'll wonder why no one did this years ago. **Note**: Just make sure to open the tip end to relieve the pressure when inserting it into the tube of caulk.

Part #	Description	Qty	Price
FSC-9045	Caulk Tip	5-Pack	$6.64

B

Titebond® WeatherMaster™ B

Titebond® WeatherMaster Sealant's superior polymer formula provides the best possible performance on siding, windows, doors and vents. In addition to offering exceptional flexibility, it provides unbeatable adhesion to wood, fiberboard, vinyl, aluminum, metal, brass and other common building materials. The white sealant can be painted in less than an hour after application (**note:** translucent sealant is not paintable). It is waterproof, extrudes in extreme weather conditions and is UV-resistant. This sealant contains no solvents or isocyanates and is VOC compliant.

Part #	Description	Color	Price
158251	Titebond WeatherMaster	Translucent	$9.96
158404		Chestnut Bronze	$8.99

C

FastCap® Fast Patch C

Instant waterproof clear patch

Everybody has something that needs a patch – a shop stool seat, fork lift, boat, mower, patio chair, ATV and more. This unique material tackles them all. Simply cut the patch to the size you need, peel off the backing and apply! The edges won't peel up or dry out, and it can be applied to a wet or dry surface. Fast Patch comes in a handy five pack of 3-½" x 4-7/8" sheets.

Part #	Description	Qty	Price
FSC-PATCH	Fast Patch	5-Pack	$11.70

Titebond® PROvantage™ Construction Adhesive E

VOC-compliant

Everyone is jumping on the "green" bandwagon these days, and we are no exception. From start to finish, you'll feel good about helping to maintain a healthy environment. These adhesives are VOC-compliant. The PROvantage™ Construction Adhesive is an all-purpose glue that is ideal for joining all types of construction materials, because it fills irregular gaps while staying flexible. The Construction Adhesive exceeds AFG-01 and ASTM D3498 requirements. PROvantage™ products are non-flammable and clean up with water. 10 oz.

Part #	Description	Price
213259	PROvantage Construction Adhesive	$6.43

Titebond® 100% Silicone Sealant F

This versatile silicone sealant is strong, flexible, water-resistant and mildew-resistant, as well as VOC-compliant. It is NSF 51 Certified for direct food contact and meets FDA regulation 21-CFR-177.2600 for indirect food contact. It exceeds ASTM C920 and TT-S-00230C requirements. It adheres to many common building materials and can be used for both interior and exterior applications. 10 oz.

Part #	Description	Price
213258	100% Silicone Sealant	$15.18

Pricing is subject to change at any time due to market fluctuations.

Professional Grade. Professional Results.

TITEBOND® ADHESIVES

Titebond® Cold Press G

Titebond® Cold Press glues are specially formulated for adhering High-Pressure Laminates (HPL) and veneers to solid wood, particleboard, MDF, plywood, and other porous materials. They offer a moderate speed of set time and a translucent glue line.

Part #	Description	Qty	Price
158234	Titebond Cold Press	Gallon	$38.50

G

Titebond® No-Run-No- Drip Wood Glue H

Titebond® Molding & Trim Glue is the thickest, fastest-drying glue available with porous and semi-porous materials. It is ideal for finish trim, crown molding, baseboards, window casings, and other applications requiring professional strength and no-run wood glue. Titebond Molding & Trim provides a strong initial tack and fast set speed yet allows realignment of workpieces. It also develops a bond that is more robust than the wood itself. It can be easily sanded and is unaffected by finishes.

Part #	Description	Qty	Price
158246	No-Run, No-Drip Trim Glue	16 oz	$10.89

H

Titebond® Premium Glue I

Titebond® II Premium Wood Glue is specially made for exterior applications. It can be applied at lower temperatures and has a longer set time, but you are good to go once set!

Part #	Description	Qty	Price
158214	Titebond II Premium Glue	8 oz	$6.83
158215		16 oz	$11.17
158216		Quart	$15.12
158217		Gallon	$33.17

I

Titebond® Instant Glue J

Sets up in seconds!

The thin adhesive works great for repairing hairline cracks and veneer edges. The medium glue can fill knots and voids in wood and seal the end grain. The thick glue bonds miter joints on MDF and other porous woods, rubber, PVC, and granite. The gel is ideal for gluing odd-shaped parts. The Instant Bond Activator facilitates curing and works exceptionally well when filling voids and gluing porous woods in low humidity conditions. Instant Bond Activator is flammable. Store in a cool, dry place away from flames. Keep out of the reach of children.

Part #		Description	Price
158438		2 oz Thin	$16.94
158439		4 oz Thin	$29.16
158442		4 oz Med	$29.16
158445		4 oz Thick	$29.16
158247	NEW	2 oz Medium Jet Black	$6.00
158450		2 oz Activator	$14.16
213262		Spray Bond Accelerator	$29.45

J

Titebond® II Dark Wood K

Are you working with dark wood and don't want your glue line to show? Then the Titebond Dark Wood Glue is for you! This is a dyed version of the Titebond II Wood Glue. It develops a bond stronger than wood, dries quickly to reduce clamping time, and provides a strong initial tack. The Dark Wood Glue can be used on wood, hardboard, particleboard, leather, cloth, and most porous materials. Like most Titebond products, it is non-toxic and cleans up with water.

Part #	Description	Qty	Price
158242	Titebond Dark Wood Glue	8 oz.	$7.52
158243		16 oz	$12.32
158244		Gallon	$36.74

TITEBOND® ADHESIVES

A

B

C

D

E

Titebond® Melamine Glue A

The Melamine Wood Glue works best in joining porous substrates like particleboard and MDF to melamine, vinyl, HPL and metals. It's as thick as molasses so there is less dripping and running, but like molasses, it gets tacky quickly. However, it allows you plenty of time to "fine tune" your alignment before it sets. Melamine Glue is non-flammable, low odor and dries clear. It is water based so cleanup is easy.

Part #	Description	Qty	Price
158237	Titebond Melamine Glue	16 oz	$11.22
158238		Gallon	$38.08

Titebond® Original Glue B

The industry standard for woodworking is the Original Wood Glue. Its rapid tack and set times are ideal for shorter clamping time. Professional results are obtained. Plus, it can be sanded. Original Wood Glue may be used with wood, hardboard, particleboard, leather, cloth and most porous materials. It is nontoxic and cleans up with water. For interior use.

Part #	Description	Qty	Price
158220	Titebond Original	4 oz.	$3.73
158221		8 oz.	$5.60
158222		16 oz	$9.31
158223		Quart	$13.49
158224		Gallon	$27.82

Titebond® II Extend Glue C

The Titebond® II Extend Glue is ideal for exterior uses that need longer set times for complex assemblies. It is compatible with Hot Press and Radio Frequency (R-F) gluing systems. It dries to a translucent glue line, has excellent sanding ability and is unaffected by finishes.

Part #	Description	Qty	Price
158213	Titebond II Extend	4 oz	$5.49
158218		16 oz	$13.08
158219		Gallon	$39.81

Titebond® III Ultimate Glue D

Titebond III Ultimate Wood Glue is the first one-part, water cleanup wood glue ever offered that is proven waterproof.
The Ultimate Wood Glue is ideal for exterior and interior applications. Since it's nontoxic, it has been approved by the FDA for indirect food contact. It is solvent free and cleans up with water.

Part #	Description	Qty	Price
158208	Titebond III Ultimate Glue	4 oz	$6.28
158209		8 oz.	$9.74
158210		16 oz	$13.93
158211		Quart	$21.29
158212		Gallon	$46.97

Titebond® Liquid Hide E

Professional woodworkers have come to appreciate the properties of Liquid Hide Glue. It provides long assembly time so that you can get the pieces put together just right! The bond is exceptionally strong, yet its sensitivity to moisture allows for easy disassembly as well. Liquid Hide Glue provides superior creep resistance, excellent sanding ability and is unaffected by finishes. It's ready to use – no mixing, heating or stirring is needed.

Part #	Description	Qty	Price
158239	Titebond Liquid Hide	4 oz.	$6.68
158240		8 oz.	$10.58
158241		16 oz	$16.47

Pricing is subject to change at any time due to market fluctuations.

FastCap® Glu-Bot Glue Bottles F

Guide tip for edge gluing

FastCap's® Glü-Bot edge guide centers the glue tip on the edge of the board for perfect edge gluing. The guide is designed for ¾" W boards but fits boards up to about 1" thick. The guide tip only fits the 16-oz. glue bottle. FastCap's® Glü-Bot and Babe-Bot glue applicators' unique dual-chamber design uses simple hydraulics to reduce glue-up mess and make application easy. A small squeeze of the large chamber yields a large amount of dispensed glue. When the pressure is released, the excess glue is sucked out of the tip, keeping it clean and ready for action. Keeps glue fresh by sucking glue from the bottom – first in, first out! Handy microtip creates an incredibly fine glue bead for precise application. Imported.

Part #	Description	Qty	Price

G

Quick & Thick Multi-Surface Glue H

Great for wood-working, home repairs and crafts

Stronger and thicker than the usual PVA glues, you can use this on multiple surfaces such as wood, ceramics, glass, stone, pottery. It can be used to fill small gaps and cracks. The best part is it cleans up with water and is non-toxic and non-flammable. It dries clear and flexible and can be sanded. For indoor use only. Do not use below 50 degrees. It has a 3-5 minute assembly time at 70 degrees and sets up in about 10-15 minutes at 70 degrees.

Part #	Description	Qty	Price
213294	Titebond Quick & Thick Glue	8 oz.	$6.55

H

Titebond® Titebrush I

Easy to clean, easy to use

The Titebond brush has 100% silicone bristles with a durable plastic handle. The glue is spread evenly with the bristle design and a paddle end is useful for fine details, joints and molding. It's compatible with all types of glue. To clean up the brush, just let the glue dry on the bristles and then peel it off, or you can just wash in warm soapy water.

Gorilla® Glue

Part #	Description	Qty	Price

Original Gorilla Glue A

When you have big indoor/outdoor gluing jobs, reach for Gorilla® Glue. This weatherproof glue works on stone, metal, ceramic, glass, foam, wood and more. It dries brown; clamping time is 2 hours, with a fully cured joint in 24 hours. The 8-oz. bottle covers 16 sq. ft.

216001	Gorilla Glue	2 Oz	$7.49
216533		8 oz	$6.49

Gorilla Wood Glue B

Gorilla Wood Glue, a PVA glue, offers the benefits of an easy-to use, water-based adhesive, with Gorilla strength. It is incredibly water resistant and versatile, making it great for both indoor and outdoor wood working projects.

216397	Gorilla Wood Glue	4 oz	$6.99
216534		36 oz	$13.99

Gorilla Spray Adhesive C

Gorilla Spray Adhesive is heavy duty, multi-purpose and easy to use. Gorilla Spray Adhesive forms a clear, permanent bond that is moisture resistant and can be used on projects both indoors and out. This spray adhesive is also photo safe. Its wide pad nozzle and controlled, fine mist spray provide an even application on the project you are working on.

216535	Gorilla Spray Adhesive	14 oz	$13.99

Gorilla Fabric Glue D

Gorilla Fabric Glue is a 100% waterproof, no sew solution for hems, embellishments, trim and more! Formulated to bond fabric, and hard-to-hold embellishments, Gorilla Fabric Glue provides a fast setting, permanent bond that remains flexible after washing. This high strength adhesive dries crystal clear and can be used on a variety of surfaces, making it the perfect alternative to a traditional needle and thread.

216926	Gorilla Fabric Glue	2.5 oz	$7.49

Gorilla Tape

Gorilla Tape is 3 times stronger* for a hold that lasts. Made with double-thick adhesive, strong reinforced backing, and a tough all-weather shell, this duct tape is great for indoor and outdoor projects and repairs. Gorilla tape sticks to smooth, rough, uneven surfaces, including wood, stone, stucco, brick, metal, and vinyl. Gorilla Tape, for the Toughest Jobs on Planet Earth.

*compared to a leading value brand duct tape based on 2018 IRI data

Gorilla Anti-Slip Tread Tape is designed to help prevent slips and falls by providing durable traction in wet, slick, or high-traffic areas. The multiple layers of protective coating ensure a heavy-duty, long-lasting, durable grit for use indoors and outdoors.

What surfaces can the tape be applied to? Gorilla Anti-Slip Tread Tape is perfect for ladders, steps, ramps, boats, RVs, decks, and more! Typical surfaces are sealed wood, composite decking, metal (steel/aluminum), and sealed concrete.

Gorilla® Double-Sided Tape is made with a strong, thick adhesive on both sides for a heavy-duty bond. It is great for securing items indoors and out. Gorilla® Double-Sided Tape sticks to smooth and rough surfaces, including carpets, rugs, flooring, wood, stone, brick, metal, vinyl, plastic, paper, and more.

FastCap® 2P-10 & 2P-10 Rubber Toughened

Industrial-grade instant glue is triple-distilled and acidically modified to work specifically with wood. It sets in 10 seconds; it's easy to sand within a minute and cures in 30 minutes. Each bottle has a guaranteed two-year shelf life. Dries clear. Caddy holds a 10-oz. bottle of 2P-10 Jël and a 12-oz. can of activator. Colorant Kit includes six base colorants to mix with 2P-10 for filling cracks and holes, a 2-¼-oz. The bottle of Jël, mixing sticks, and 90 solo pads are in a hardshell case. Solo Kit includes a 2-¼-oz. tube of 2P-10 and a 12-oz. can of activator. Mini Kit includes 1-oz. glue bottle and 1-oz. activator bottle. 2P-10 Kit includes a 2-oz. bottle of debonder, activator, Jël, and thick, medium, and thin adhesives. Tip Pack includes three tips. XTip is a multi-cap for 1-oz. bottles.

Glue Bottle

Glue bottles to fit your gluing applications. The Roller Top will allow you to spread glue over flat surfaces in your open time for the glue. The Biscuit Slot will allow you to get the glue into the biscuit slot without much effort. The Nozzle Tip is for those dowel joints where you are using 3/8 in. dowels or larger.

It contains an 8-oz. bottle with a cap. It can be cleaned easily with a damp cloth or under warm water. The applicator tip and bottle are made from nonporous polypropylene, so glue can't stick. It is perfect for white, yellow, or liquid hide glues.

GLUE / GLUING SUPPLIES

A

Painters Blue Tape A

It delivers sharp paint lines and can be used on a variety of surfaces. This 180-foot roll of tape is used for paint masking, stenciling, holding, and bundling.

SKU		Name	Price
BB-M22020	NEW	Painters Tape Blue - 1.4 inches by 60 yards	$5.74

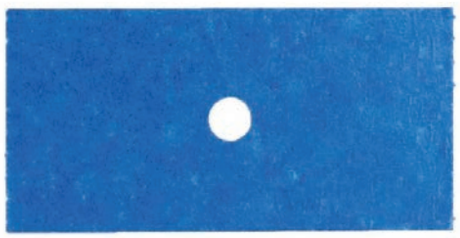

B

Black Green Red White Yellow

Vinyl Electrical Tape B

Put away your trusty roll of duct tape; this new silicon-based repair tape can do things you won't believe until you try it! It insulates to 8000 volts (ideal for electrical repairs), it won't melt up to 500°F (perfect for emergency muffler patches), forms a permanent watertight seal (fix that leaky radiator hose), it remains flexible to -60°F (add a roll to the snowmobile emergency kit), and it requires no adhesive since it only bonds to itself! X-treme tape stretches to 3 times its length, conforms to irregular shapes easily, and withstands UV rays, acids, and fuels. Once wrapped over itself, it forms a bond immediately and is permanently fused in 24 hours. Each Roll is ¾ in. x 60 Ft. Made in USA.

C

Nail Hole Tape C

Avoid the muss and fuss when filling in the nail holes on all of your trim work with the FastCap Nail Hole Tape. Put on over the hole so that excess filler lands on the tape not the trim. Perforated every two inches, this 1 inch wide tape has a hole between perforations. Peel it off, sand lightly and you're done. Comes in a roll of 180 feet.

SKU	Name	Price
FSC-9105	Nail Hole Tape - 50 ft. Roll	$6.66

D

Milescraft TriGrips D

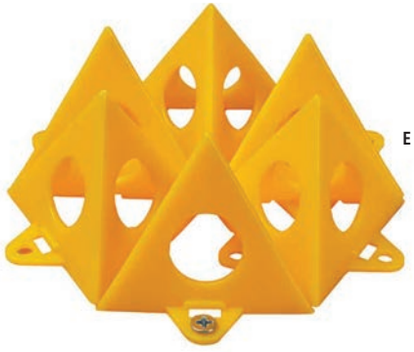

TriGrips™ non-slip work supports hold projects securely for routing, sanding, painting, drilling, carving, and more. The pads hold projects in place while elevating them 1-3/16" above the work surface allowing complete access to edges while holding the project in place for painting and edge routing. Exclusive integrated painter's points provide additional lift from the work surface and make minimal contact with fresh coats of paint or stain. Internal ballast ensures stability by allowing the center of gravity to flow to the base in any position.

SKU		Name	Price
MCR-1600	NEW	TriGrips	$9.99

Painter's Pyramid E

Pyramids hold the workpiece above your working surface for less mess and easier cleanup. Non-stick points have minimal contact, allowing you to paint one side, immediately flip the workpiece and complete the job without the drying time. Great for cabinet doors, shutters, furniture, crafts,

Abatron Woodepox A

- Epoxy Wood Filler for Damaged Wood

Structural 2-Part Epoxy Adhesive for Filling and Replacing Wood. Uses: WoodEpox® is an epoxy wood filler that fills, repairs and replaces missing wood, permanently, both indoors and outdoors on both structural and decorative substrates. It is commonly used to repair windows, sills, thresholds, doors, frames, shutters, columns, posts, balusters, floors, furniture, sculptures, artwork, and more. In can be used to bond or bridge separated sections of wood. WoodEpox can also be used to fill and patch substrates other than wood including ceramics, stucco, concrete, and most rigid surfaces.

Part #	Description	Price
AB-WEAB	12 Fl Oz	$24.95
AB-WE2G	2 Gal	$194.99

Abatron Wood Restoration Kit B

LiquidWood is a penetrating epoxy wood consolidant used to structurally harden, regenerate, and waterproof decayed wood. WoodEpox is a shrink-free epoxy putty used to permanently fill, repair, and replace missing wood. Abosolv is a general-purpose thinner and solvent for epoxy. It thins LiquidWood when necessary and can also be used for general epoxy clean-up. Use these products together to restore and repair wood on windowsills and frames, columns, doors, moldings, clapboards, balustrades, boats, furniture, and anywhere else wood needs to be strengthened or repaired.
These kits contain LiquidWood Part A and Part B, WoodEpox Part A and Part B, and Abosolv*. They also contain disposable gloves, a putty knife, mixing sticks, and instructions.
*24 fl. oz. kit does not include Abosolv.

Part #		Description	Price
AB-WRK6	NEW	24 Fl Oz Kit	$49.75
AB-WR4Q	NEW	4 QT Kit	$157.95

Abatron Liquid Wood Kit C

- Structural Epoxy Wood Hardener and Consolidant for Deteriorated Wood.

LiquidWood® penetrates wood fibers and structurally hardens decayed and weathered wood permanently. Use indoors and outdoors and on both structural and decorative wood. Use to harden and restore wood on buildings, windows, columns, beams, decks, boats, furniture, artwork, and any wooden architectural elements. Use also as a primer or thinner for WoodEpox®.

Part #		Description	Price
AB-LWAB		12 Fl Oz	$27.75
AB-LW2G	NEW	2 Gal	$224.95

Abatron Clearstrip Gel D

Environmentally Friendly Paint Stripper. Removes Multiple Layers in a Single Application.

Easily remove paint, varnish, epoxy, or polyurethane by applying Clearstrip™ Gel onto the coated surface and then lightly scraping it away. Use inside or outside on most rigid surfaces including wood, concrete, brick, and metal.

Part #	Description	Price
AB-CLRP	1 Quar	$29.50

Abacrete Concrete Repair E

Liquid Epoxy Compound for Patching, Resurfacing, and Rebuilding Concrete.

Abocrete bonds, levels, fills, rebuilds, and resurfaces concrete and most rigid surfaces. This versatile epoxy is blended with fine sand, creating a structural grout and filler that can be used for countless applications. Repair industrial floors, docks, sidewalks, driveways, stairs, parking decks, and more. Abocrete is perfect for fixing pitted, spalled, worn, or cracked concrete and is ideal for salt damage repairs. It makes a great slip-resistant floor and deck coating by broadcasting sand or other aggregates over the wet Abocrete. It eliminates tripping hazards both at home and in the workplace. Abocrete works great for anchoring posts and railings and installing machinery, precasts, columns, and more. Use with forms to rebuild steps and vertical columns.

Part #	Description	Price
AB-ACSR	Mini Abocrete Kit (no sand):	$36.10

ApolloSpray PRECISION-6 PRO Turbo Paint Spray System F

The all **NEW** and enhanced power and exclusive features of the **PRECISION-6 PRO** put you in control of the most advanced **TrueHVLP™** system for industries and applications demanding precision HVLP technology for the perfect finish. With a powerful 6-stage motor, the **PRECISION-6 PRO** can be used for the widest range of coatings, solvent or water base, clear or pigmented, as well as specialized materials: faux paints, gelcoat, latex (emulsion), and multi-spec. Even better, it is excellent for spraying specialized Italian waterborne coatings!

AdvancedFeatures

- **Precision:** Pressure Control System (PCS™) controls motor speed, voltage, and amperage, adjusting automatically for altitude and barometric pressure, assuring precise atomizing pressure anywhere.
- **Unparalleled Power & Efficiency:** Delivers 11.5 PSI sealed pressure for optimum atomization. Documented 80+% transfer efficiency and 38% savings on coatings compared to compressed air systems.
- **LCD Message Center:** Hour Meter, Accurate Pressure to 1/10th PSI, Idling, Filter, and Temperature Warning.
- **PowerPause™:** Provide a 60-second auto-idle mode to preserve motor life and long-term reliability while permitting the highest available flow pressure. (U.S. Patent 9,599,117 B2).
- **QuadraClean™:** Dual automotive paper filters provide advanced air filtration to keep the system running cooler and prolong motor life.
- **32" (9.75 meter) Apollo-Flex™ Hose:** Quick lightweight alloy couplers on both ends and our exclusive Ultra-Flex™ whip hose at the spray gun end.
- **Handi-Hold™ Spray Gun Docking Station:** Store, hold, or transport your spray gun or other accessories safely.

ApolloSpray® POWER-4 - 4-stage turbine with A7700T Spray Gun G

The easiest to use HVLP spray finishing systems available

Experience 80%-90% TE (Transfer Efficiency) and a cleaner work environment with Apollo Sprayers Turbospray HVLP spray systems, the easiest to use HVLP spray finishing systems available. Apollo's gentle warm dry turbo air ensures no moisture contamination in your finish or your work.

If your desire is to increase the range of coatings and finishes you want to spray with ease and without compromise, consider Apollo's enhanced Power-4 HVLP Turbosprayer. With 12% more power than other systems in its class, you have the power and performance to spray higher viscosity materials with excellent results. With a powerful motor installed, to spray everything from stain to multi-spec paints at manufacturers recommended viscosities. The Power-4 is used by woodworkers, boat builders and restorers, automotive and airplane restorers as well as any industry desiring super fine atomization to spray stains, lacquers, enamels, polyurethanes, catalyzed finishes, conversion varnishes, and linear polyurethanes, as well as any waterborne coatings, latex (emulsion) paint, multi-spec paints and more. The Power-4 will support multiple spray guns with an optional Y-connector, part #A4227. The Power-4 is available with the All-NEW AtomiZer® 7700 non-bleed spray gun in 1 Quart Bottom Cup, 4 models of Gravity Cup (90 cc /250 cc /600 cc /1000 cc) and an 8oz Mini-Cup. Our Handi-Hold® Spray Gun Docking Station, an Apollo innovation, will store, hold, or transport your spray gun in a vertical position with no risk of knocking or falling over. It is ready to spray when you are.

ApolloSpray® Falcon Series Turbine HVLP Sprayers B

Soaring Performance & Value

The Falcon Spray FS3 HVLP paint spray system is an efficient 3-stage turbine designed for the professional hobbyist or occasional finisher and made with pride in the USA. The Falcon Spray FS3 can be used to spray a wide range of thin to medium viscosity finishes on cars, boats, planes, wood projects, fencing and more.

Power and Performance: Delivers 7.0 PSI sealed pressure for optimum atomization of many finishes. Documented 80+% transfer efficiency and 38% savings on coatings when compared with compressed air systems.

Dual Air Efficient Design and Filtration: The twin automotive-grade external air filtration removes airborne particulates and the 16 cooling louvers extract heated air from the inner case to preserve motor life.

QT Quiet Technology: Computer designed Quiet Technology lowers dBa levels for a more pleasant spraying experience.

Handi-Hold Spray Gun Docking Station with Redi-Loc: Store, hold or transport your spray gun, or other accessories, safely and never tip your gun over again!25 ft. (7.6 meter) Flexible Hose: Quick lightweight alloy couplers on both ends and our exclusive flexible air hose.

Spray Gun Options: Apollo offers 3 spray guns that are compatible with the Falcon Spray Systems. Choose from 3 professional spray guns based on your needs.

Apollo® HVLP Spray Systems

Isn't Your Time Worth the Best?

HVLP stands for "High Volume Low Pressure," and it's the solution to the overspray problem of high-pressure spray systems. Apollo was the originator of the HVLP spray system in the United States and has been making top-quality spray equipment since 1966.

HVLP spraying uses a high volume of air (hence the oversize line from the power unit to the gun), but delivers it to the gun at only 7-9.5 psi. This greatly reduces overspray (an average of 80% of the material actually transfers to the workpiece). Spray pattern control is also improved – fan patterns from 1/4" up to 15" are easily achieved using just one tip, needle and nozzle.

Apollo HVLP sprayers use bypass-style turbine compressors to increase life expectancy and reduce maintenance problems over the common flow-through designs. Air never passes through the motor, so it is always clean and dry for maximum finish quality. Apollo's HVLP spray gun uses 300 series stainless steel for all parts contacting the fluid, yet it weighs only 14.5 oz. This assures ultimate performance, ease of use and all-day comfort. Apollo sprayers are certified to meet all government codes for transfer efficiency.

Pricing is subject to change at any time due to market fluctuations.

APOLLOSPRAY® HVLP SYSTEMS

ApolloSpray® APS-7500 Series Spray Guns C

The 7500 series has a unique spray gun design with three different cup configurations: Gravity Feed has three cup sizes, Pressure Feed has two cup sizes and Production supports a 2-qt. pot or larger. It's made from marine-grade stainless steel with no O-rings for maximum durability. Color-coded air caps make changing nozzles and needle a snap. Each model comes complete with a bronze-plated spray head, precision fan control through the Xpansive™ Fan Control Ring, MicroTech™ Atomization Technology for atomizing particles and a two-year warranty.
The **APS-5011** is supplied with 1 qt. Teflon®-coated assembly, stainless steel material filter, duckbill valve, carrying case, spare parts kit and wrench. Weight: 32.4 oz.
The **APS-7000** includes a carrying case and a 600cc Teflon®-coated gravity cup. Weight: 33.0 oz.
The **APS-7700QT** features a 1 qt. nonstick coated cup assembly, duckbill valve, deluxe carrying case, spare parts kit, stainless steel material filter, sample bottle of genuine Apollo Spray Gun Lube and a spanner wrench. Weight: 32.4 oz.
The **APS-7700GT** features a 20 fl. oz. nonstick coated gravity cup, duckbill valve, deluxe carrying case, spare parts kit, sample bottle of genuine Apollo Spray Gun Lube and a spanner wrench. Weight: 25.2 oz.
The **APS-7700MT** features an 8 fl. oz. mini touch-up cup assembly, duckbill valve, carrying case, spare parts kit, stainless steel material filter, sample bottle of genuine Apollo Spray Gun Lube and a spanner wrench. Weight: 20.3 oz.
The **APS-7700T** features a deluxe carrying case, spare parts kit, sample bottle of genuine Apollo Spray Gun Lube and a spanner wrench. Ready to use with any pressure pot or cup accessory using a 3/8" fluid coupler. Weight: 16.9 oz.

Bloxygen® Spray C

Save your paints, stains and varnish!

Prevent oxygen and moisture damage when storing your leftovers. Bloxygen uses an inert gas that helps you store your leftover oil-based stains, varnishes, polyurethanes, fillers and glues for longer. Normally, oxygen and moisture attack leftovers and form a "skin" on top that thickens these products. Just blast some Bloxygen under the lid (2 seconds per quart, 4 seconds per gallon), seals it and you won't come back to a dried-up blob. Bloxygen uses a powerful, natural inert gas-argon. Argon is a denser gas, so it forms a barrier between the product and the oxygen thus solving the problem. A single container sprays about 75 times in quarts or about 35 times in gallons, less than $0.15 per use saves $20 – $50 of product, preventing waste and saving money.

Exterior 450 Varnish E

Beautify and protect all at the same time

This environmentally friendly varnish has built in mildewcide to slow the growth of mold,mildew and fungus. It can withstand the expansion and contraction of weather changes that cause cracking and peeling. UV absorbers minimize fading from continual exposure to sunlight, rain and wind. Available in a satin, semi-gloss and gloss finish, it flows on with a brush or via an HVLP sprayer and dries to a clear finish in 1 – 2 hours, depending on temperature and humidity. Do not apply in temperatures below 60ºF. For outdoor use, make sure that the stain underneath is also rated for outdoor exposure. It can be used over most water- and solvent-based stains. Test a hidden area for compatibility to be sure. Sand lightly with 320 grit paper or higher between coats. Cleans up with soap and water and can be tinted with exterior stain.

E

Water-Based Wood Stain F

Create a custom look

For those woodworkers who really want to showcase their work, these water-based pigmented stains are just the ticket. They can be used as stand alone colors or can be mixed with General Finishes Dye Stains for custom colors. Color will vary depending on the type of wood and dwell time before wiping. They dry in 1 – 2 hours at 70% humidity, have low odor and clean up with soap and water. Covers 150 sq. ft./qt. **Do not buff or sand** between stain coats. Top with a High-Performance Top Coat. The color charts are not an exact representation; use for reference only.

Water-Based Dye Stain A

Showcase your work with superior dye stains

Dye stains penetrate deep into the wood to enhance the wood grain and produce vibrant colors. Dye stains come ready to use after stirring and are available in 12 colors in pints and gallons. These dye stains can be used by themselves, mixed with General Finishes Wood Stains to create custom colors or as a toner when mixed with water-based topcoats and are easy to clean up with soap and water. They can be applied with a brush or sprayer. Water based (High-Performance Top Coat), shellac, lacquer and solvent-based topcoats can be used on top of dye stains. Drying time is 2 – 4 hours at 70% humidity. Coverage is 75 sq. ft./pt. Color charts are not an exact representation; use for reference only. Interior use only.

B

High-Performance Top Coat B

Use this topcoat for your high-traffic and abused surfaces!

If you have a tabletop that needs to stand up to the rigors of young children or a bartop that's going to be used by numerous patrons, you'll want to use the High-Performance Top Coat. A unique hybrid of urethane and acrylic, the High- Performance Top Coat provides a hard and durable surface that can withstand scuffing, sliding and spillage. It is stabilized with UV absorbers to maximize its performance. It is a fast drying, low odor, non-flammable alternative to conventional lacquers. It can be brushed or sprayed. Sanding between coats with 320-grit paper is suggested. Three to five coats provide best protection. Allow 1 – 2 hours between coats.

Outdoor Oil C

For outdoor furniture and decks, try Outdoor Oil, an exterior-grade penetrating finish. It has both UV stabilizers as well as mildew retardants to keep your wood looking great longer. In fact, it has twice the oil of competing brands. It can be used by itself or mixed with oil-based stains. It can be used on pressure-treated lumber. Available in clear. Covers 400 – 600 sq. ft./gal.

Part #	Description	Qty	Price
GF-CL-QT	Outdoor Oil	Quart	$41.00

C

Extender D

Need more time to stain your project?

The good news is that the water-based finishes dry fast! The bad news is that water-based finishes dry fast! Yes, you want them to dry fast so you can get to that second or third coat faster, but as a perfectionist, you want enough time to do it correctly. If you are working in an environment that is hot and dry, you may need a little more time to wipe off a stain or stroke out the top coat. The EF-Extender helps slow the drying time of water-based products so that they flow and level better in those extreme conditions. Just add it to the stain, paint or topcoat, stir well and work on your schedule.

Part #	Description	Qty	Price
GF-EXT-PT	Extender	Pint	$17.00
GF-EXT-GL		Gallon	$68.00

D

Milk Paint E

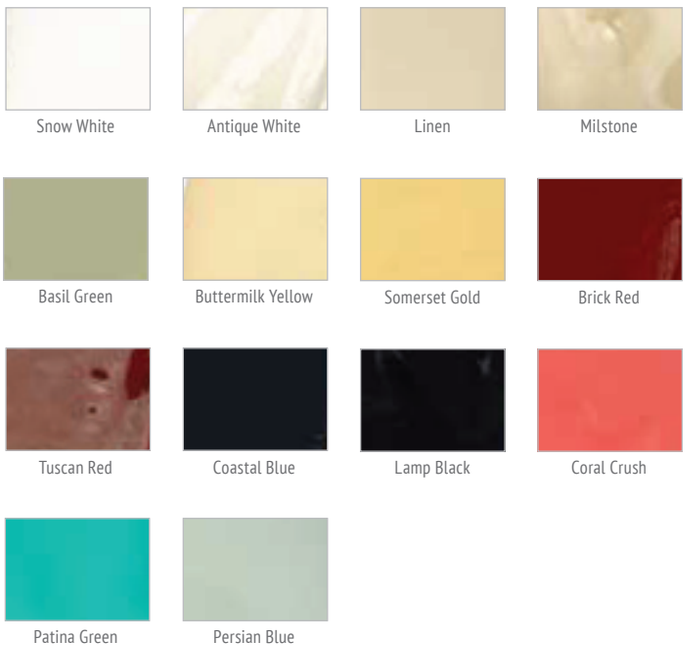

It applies with a brush or sprayer and cleans up with soap and water!

General Finishes Milk Paint provides a tough, high-quality painted finish for your project. It is designed for wood surfaces and is available in 14 of today's most popular colors. It can be applied directly from the can to your workpiece with a synthetic or foam brush, or applied using an HVLP or conventional sprayer. Milk paint is UV-resistant and is suitable for both interior and exterior furniture. Depending on the humidity, it can be sanded and recoated in 1 – 2 hours. Use fine (220-grit) sandpaper between coats. Milk paint can be applied over existing finishes and leaves a low-luster satin finish. Should a higher shine or more protection be required, General Finishes High- Performance Top Coat is recommended. Covers 400 – 500 sq. ft./gal.; mix before using. Color chart is not an exact representation of colors; use for reference only.

Stain Blocker A

Do you need to guard pigmented finishes against bleed through from stain, dye or wood tannins?

General Finishes has produced an effective stain blocker that works, not just some of the time, but all of the time. It's not in-expensive, but then neither is your time to keep re-doing what previously didn't work the last time. It can be used on existing finish, raw wood or MDF as a base coat for Milk Paints, Chalk Paint and pigmented polys. DO NOT MIX with any paint, stain or topcoat as this will cause the product to fail. Rinse all brushes (synthetic blend brush or short nap roller) with clean water. Prep surface by cleaning and sanding with 220 grit paper. It can be sprayed-on without thinning using HVLP (1.1mm – 1.5mm) or Air Compressor (.040) with the appropriate sized tip and medium size air caps. Sand between coats (approx. 1-2 hour dry time) and apply second coat on raw wood in 2-3 hours, existing finished surfaces in 3-5 hours. Drying times can vary depending on the temperature and humidity. Coverage is approx. 600 ft./gallon. Made in USA.

Part #	Description	Qty	Price
GF-SB-Q	Stain Blocker	Quart	$42.00

Glaze Effects B

Let your creativity flow

Glaze Effects are translucent colors used to create decorative finishes and are ideal for distressing, marble, shabby chic, color washing and rag-rolling effects. Use over milk paint for special effects. Glaze Effects may be intermixed to create custom colors or layered for a deeper, richer look. Test on hidden area to determine the desired color and effect. This glaze is specially formulated to allow you more working time than conventional glazes. The semi-gel consistency minimizes running and dripping yet allows you to apply and wipe with ease. It can be applied with a brush, roller or sprayer. It can be topcoated with General Finishes High- Performance Top Coat to provide additional protection from normal wear. Covers 150 sq. ft./qt.

Gel Stains C

Beautify and protect all at the same time

Everybody knows buying new cabinets can be very expensive. So when you want to look like you have new cabinets but all you really want to spend is "sweat equity", spruce up your cabinets with Gel Stain. Gel Stains are formulated with a combination of pigments, oils, and urethanes to produce a durable and beautiful "hand-rubbed" finish. Gel Stains are heavy-bodied (thick and less likely to run and drip all over the place). Do not penetrate as deeply into the wood as liquid oil base stains do. Apply with light even coats, usually takes 2-3 coats, then cover with a top coat. Let the project dry thoroughly between coats. Go from old-fashioned to fabulously fashionable in no time! Available in all the popular colors, go light or go dark – you choose. **Cannot be shipped by air or through the postal system.**

B

Gallon Mixer Lid B

Waterborne paints contain less solvent, which causes paint residue to stick to the pouring spout, making dispensing difficult. To address this, we've installed an anti-adhesive shutter to the underside of the pouring spout to reduce dried paint residue and improve performance. Another complaint with waterborne paints is that they tend to creep upwards and 'ooze' through the central shaft seal, spilling onto the lid body. The problem can also adversely impact the strength of the toner if the paint isn't shaken before being installed on the mixing machine. X5 lids introduce a new central seal concept that will literally push paint back inside the can during the mixing cycle.

C

Hard Wax C

This is General Finishes' easiest finish ever and the best oil and wax finish on the market. Hard Wax Oil is a high-quality urethane-solids polymer in a blend of oil & wax that enhances the natural look of wood. The urethane gives Hard Wax Oil improved chemical and mechanical properties over standard oil & wax finishes. **Best used** with optional GF Hardener to substantially shorten dry time and provide **superior durability, and chemical and water resistance.** The recommended use is for interior raw wood furniture, millwork & woodworking projects. What results can you expect? It will not crack or peel, can be buffed to a slightly higher sheen, and is very EASY to use. This is a maintenance product. Reapply when wear becomes evident.

GF-WTF	Wood Turners Finish 8 oz.	$18.50

Oils I

Butcher Block Oil is a natural protectant for all wood surfaces that come in contact with food. Use this oil-based finish on wood cutting boards, utensils, bowls and butcher blocks. The mineral oils used in General Finishes Butcher Block Oil meet all the requirements for use on wooden products that come in contact with food. Orange Oil is General Finishes most popular and natural furniture care product. It can be used on any cured finish and does a superb job of removing everyday dirt and dust. Orange Oil is all-natural, non-combustible with a fresh orange scent. Designed for use on interior wood finishes. Orange oil is great for routine furniture maintenance, antique restoration and as a lubricant when buffing topcoat.

GF-PTBB-P	GF Butcher Block Oil -Pint	$19.00

3M® Cartridges for 6000 Series Full/Half Mask Respirators

P100/Organic Vapor Cartridge C

Organic vapor cartridge with permanently attached P100prefilter. Use for paint spraying (including paints containing isocyanates when cartridge-change-out schedule is in place, according to NIOSH approval) and certain organic vapors.

Part #	Description	Price
ERB-60921	3M Organic Vapor Cartridge/Filter 60921	$43.09

C

Organic Vapor Cartridge D

Use for paint spraying (including paints containing isocyanates when cartridge-change-out schedule is in place, according to NIOSH approval) and certain organic vapors. Use with N95 Prefilter (ERB-13543) to add protection for dusts and mists that do not contain oil.

Part #	Description	Price
ERB-13538	3M Formaldehyde/Organic Vapor Cartridge 6005	$21.52

D

P100 Particulate Filter E

(Replaces HEPA designation under new NIOSH standard.)

Part #	Description	Price
ERB-13594	3M Particulate Filter, 6000, 7500 and Ff400 Series Respirators	$89.95

E

P100 Flat Pancake Particulate Filter F

Has nuisance organicvapor layer for odors. Its has a low profile for fitting under welding helmets.

Part #	Price
ERB-13596	$17.93

F

N95 Prefilter G

For dusts, mists and fumes that do not contain oil. Cannot be used as a stand-alone filter; must be used with Item ERB- 13538. Requires ERB-13544 retainer, below.

Part #	Description	Price
ERB-13543	3M Particulate Filter 5N11	$27.60

G

Prefilter Retainer H

Use with item ERB-13543 to secure it to Item ERB-13538.

Part #	Description	Price
ERB-13544	3M Filter Retainer 501	$75.01

H

ERB Shop Apron I

Protect your clothing

Woodworking and finishing can be a messy business, so it makes sense to cover your clothing with an apron. This denim apron is heavy-duty at 10.5 oz. Dark indigo denim hides dirt and stains. It has a 4" divided chest pocket for pens and markers and a 5-¼" divided waist pocket for larger items. The apron measures 36" L x 24" W and features nylon ties.

Part #	Description	Price
213172	Denim Shop A	$10.07

I

Kinco® Heavy-Duty Leather Shop Apron J

This cowhide leather shop apron is so rugged it may be the last shop apron you'll ever need to buy! All seams are sewn with Kevlar® thread and are double-lock stitched for greater durability. Combination back and waist strap adjusts for a snug and comfortable fit and eliminates neck strain problems associated with traditional aprons with neck straps. The strap adjusts up to 16." Convenient chest pocket is perfect for storing tools or marking utensils. Measures 42" L x 24" W. Imported.

Part #	Description	Price
148009	Leather Apron	$35.25

J

3M® 6000 Full-Face Respirator K

When more protection is needed than the half-facepiece version, we offer the 3M™ 6000 series full-face respirator, which is also NIOSH approved and meets the requirements of the AS/NZS 1337 standard, high-impact level for face and eye protection. The facepiece has easy-to-adjust head straps and is lightweight – only 1-½ lb. with the combination cartridge/filter. Soft silicon faceseal comfortably conforms to the face. A full-size nose cup reduces lens fogging. Cool Flow™ exhalation valve makes breathing easier and reduces moisture build-up in the mask. Exhaled air is directed down and out of the mask. The cartridges and filters are replaceable. Specify size: S, M (fits 70% of men) or L. Order cartridge filters separately.

Part #	Description	Size	Price
ERB-13571	Full Face Respirator	Small	$266.11
ERB-13551		Medium	$266.11
ERB-13572		Large	$266.11

K

PERSONAL PROTECTION

A

3M® 6000 Series Half-Face-piece Respirator A

Wide selection of cartridges for application specific protection

Most woodworkers, contractors and do it-yourselfers find themselves exposed to a surprisingly wide array of airborne contaminants that they either don't recognize or fail to use adequate protection against. **Think about it:** do you use a respirator when working with fiberglass insulation, pesticides, lawn chemicals, spray finishes, or even when sweeping out the shop (that can raise a lot of dust!)? The 3M™ 6000 series half-face-piece respirator is economical, comfortable, versatile and available in three sizes to help ensure a perfect fit! Minor parts are replaceable (valves, straps, etc.) for long life, but major components, like the mask body, are not, which reduces the initial cost. The lightweight, balanced design has an easy-to-adjust head-strap for rapid removal and repositioning without strap adjustment. For best protection, select a 3M NIOSH-approved respirator cartridge designed for the anticipated exposure. Respirator does not include cartridges or filters – order separately. Available in Small (fits most women and those with smaller facial features), Medium (fits 70% of men) or Large.

Part #	Description	Size	Price
ERB-13535	3M Half-Facepiece	Small	$24.40
ERB-13536		Medium	$24.40
ERB-13537		Large	$24.40

B

FastCap® Skins Gloves B

Fit like skin

The name says it all – they fit like skin. You'll no longer worry about bulky gloves that keep you from picking up and doing what you need to. These gloves are lightweight, ultra thin and yet abrasion-, puncture- and snag-resistant. If you need even more dexterity and even more abrasion resistance, try the Skins HD or cut off the fingers of the regular Skins Gloves. Just take out your fingers first. The Skins gloves will not unravel after being cut. The back of the hand is made from lightweight, breathable material for both styles. The palm side of the regular Skin glove is nitrile, while the HD version is latex. Both offer excellent gripping, but the latex offers a better grip in dusty and oily applications. They can be machine washed and drip dried. Color-coded cuffs make it easy to grab the correct size. Sold in pairs. The red cuff is XL, green is L, yellow is M and blue is S. Imported.

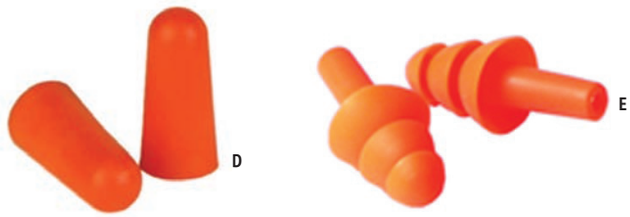

Part #	Description	Size	Price
FSC-6040	Regular	Large	$8.06
FSC-6041		Medium	$8.06
FSC-6042		Small	$8.06

Particulate N95 Respirators F

Recommended for light duty or short duration applications such as grinding, light sanding, sweeping or working in other dusty environments. Features nose clip with foam padding. This economical disposable N95 particulate respirator is designed to help provide reliable worker respiratory protection against certain non-oil-based particles. 3M Particulate Respirator 820%7023 (AAD), N95 is an economical, disposable particulate respirator that is designed to help provide reliable respiratory protection of at least 95 percent filtration efficiency against certain non-oil-based particles. This respirator is designed for particles such as grinding, sanding, sweeping, sawing, bagging, or processing minerals, coal, iron ore, flour, metal, wood, pollen, and certain other substances. It may also be used for liquid or non-oil-based particles from sprays that do not emit oil aerosols or vapors. This respirator can also help reduce inhalation exposures to certain airborne biological particles (examples: mold, Bacillus anthracis, Mycobacterium tuberculosis), but cannot eliminate the risk of contracting infection, illness, or disease.

- ERB-13513 - is recommended for light-duty or short-duration applications such as grinding, light sanding, sweeping, or working in other dusty environments.
- ERB-13515 – is recommended for lightweight construction
- ERB-13578 – is recommended for cake-resistant media filter - Suggested applications: lead, cadmium, arsenic

Propane Torch Holder A

Most everyone has a propane torch in their workshop, and it seems to always be in the wrong place. Add a bit of organization to your workbench with an ABS plastic torch holder to keep your torch upright, eliminating tip-overs and torch damage. The holder measures 8-¾" x 4-¼" and holds standard 14.1-oz. canisters (400g propane) with a base up to 3-¼." Mounting holes and screws are included, but the propane torch is not included.

Part #	Description	Price
KM-TS1	Propane Torch Hold	$10.46

Klein Tools® Leather-Bottom Bucket B

The Klein Leather-Bottom Bucket is a straight-sided, No. 1 thick canvas tool bucket with a leather bottom for durability. The leather extends 3" up the side of the bucket. An inside pocket measures 8" x 8." A rope handle is reinforced with leather for durability and water resistance.

Part #	Description	Price
140954	Leather-Bottom Bucket	$73.37

FastCap® Flex Screw Bag - Square C

If you like the round Flex screw bag, you'll love this one even more. It's larger and the "arms" fold in and close the top for secure carrying. Writable tabs let you identify what is in each of the compartments for better organization and quick removal. Made from ballistic nylon, so you know it can stand up to heavy daily use. Imported.

Part #	Description	Price
FSC-9038	Flex Screw Bag - Square	$36.53

FastCap® Flex Screw Bag D

Six different types of screws at your fingertips

Made from tough ballistic nylon, this screw bag identifies each of the six pockets with an identity tag. A drawstring pulls the sides over the screws for containment. A 9-½" center carrying strap can also be used to hang the bag. It fits perfectly in a 5-gal. bucket. Pockets are 4-½" deep. Imported.

Part #	Description	Size	Price
FSC-9011	Flex Screw Bag	39" Circ, 12" Dia	$29.22

Magnetic Tool Holder E

Powerful magnet holds heavy hand tools

Keep any metal tool: screwdrivers, pliers, wrenches or hammers, up and out of your way. This handy 13" magnetic tool holder keeps your work space organized and your tools at your fingertips. Equipped with a powerful magnet that is capable of holding your heaviest hand tools, it keeps your workbench clutter-free. Mounting holes and screws included.

Quantum Stack and Hang Bins F

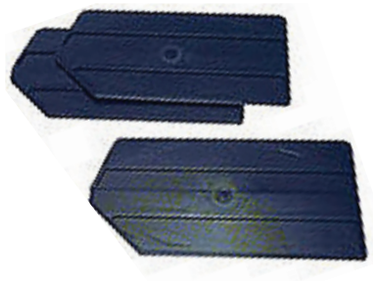

With 12 sizes, you'll have a hard time finding a bigger selection

These bins aren't just handy for screw storage. Virtually any loose part can be organized in one of these for easy storage. Comes in 13 sizes, so you're not going to find a bigger selection anywhere. These beauties have front, back and side grips and are reinforced for extra strength. Even better is the rear hanger that allows them to be hung from louvered panels or racks. They're made from high-density, FDA approved polypropylene/polyethylene and will not rust or be affected by weak acids or alkalis. Not all sizes available in all colors. Specify color: B (blue), BL (black), G (green), R (red) or Y (yellow). Note: Contents not included.

Quantum Tip-Out Bins! A

Turn unused wall space into useful storage space

We've touted the virtues of these for some time. There's no reason to let dust get in your hardware supply or deal with sweeping up broken glass from a jar knocked over by accident. You've seen the nine-bin-, six-bin- and five-bin-per-row configurations in our catalog for the last several years, but like all things storage related, we've expanded our selection! The larger three-bin- and two-bin-per-row configurations increase the usefulness of this concept by leaps and bounds. These modular plastic racks interlock vertically so units can be stacked. These also come pre-drilled with the holes you need for easy wall mounting (although hardware isn't included). The clear bin cups are made of a custom blend of resin and styrene, ensuring a long life of clarity and durability. Exterior housing is constructed from a high-impact polystyrene. **Note: Contents not included.**

Part #	Description	Overall Dimensions	Weight	Price
QTB-0309	Row of 9 Tip-Out Bins	2-½" x 23-5/8" x 3-1/8"	2 lb	$54.31
QTB-0306	Row of 6 Tip-Out Bins	3-5/8" x 23-5/8". x 4-½"	3 lb	$58.98
QTB-0305	Row of 5 Tip-Out Bins	5-¼" x 23-5/8". x 6-½"	5 lb	$88.87
92822	Row of 4 Tip-Out Bins	6-5/8" x 23-5/8" x 8-1/8"	7 lb	$143.19
92821	Row of 3 Tip-Out Bins	7- ¾" x 23-5/8" x 9-½".	9 lb	$152.95
92820	Row of 2 Tip-Out Bins	11-¾" x 23-5/8" x 13-7/8"	14 lb	$495.16

Quantum Heavy-Duty Color-Coded Shop Storage Bins B

These rugged bins are almost 50% heavier and have walls over 50% thicker than standard bins, making them sturdier and stronger. Available in red, yellow, and green, like the standard color coding for #0, #1, and #2 drivers. Label slots on the front allow for easy identification of the contents. The bins stack or hang on the (2) included wall-mounted support strips for easy removal. Bins measure approximately 3"H x 4-1/8"W x 5-3/8"D. Bins only**. Screwdrivers and product not included.**

Super Neodymium Magnet Discs C

All magnets are not created equal. Neodymium magnets are a permanent type of Rare Earth Magnet, made from neodymium, iron, boron and other transition elements. These are the strongest permanent magnets on the market today. Neodymium magnets have many uses, from a variety of industrial applications to an unlimited number of personal projects. They can be used in the manufacturing of motors, alternators, and actuators and also great for crafts, school experiments and DIY jobs. Use for practically any light, medium or heavy-duty project, where super strong pull force is required.

Part #	Description	Price
MM-7045	.315 in. Dia. x .118 in. Thk. (10 pcs.)	$6.92
MM-7046	.472 in. Dia. x .118 in. Thk. (6 pcs.)	$6.58
MM-7047	.709 in. Dia. x .118 in. Thk. (3 pcs.)	$6.58

Talon® Perfboard Hooks D

How many times have you taken a tool off a perfboard hook only to have the hook come with it? And why is it that the hook that falls off so easily is so difficult to re-install? Talon perfboard hooks not only lock in place, but they also don't require extra fasteners to do it. An expanding anchor is actuated by pushing on a self-contained pin. When the hook needs to be repositioned, the cross-slots in the pin allow it to be unscrewed for instant reuse. Made of tough nylon in seven different styles to suit almost any requirement, they are also easily cut or shaped to suit special applications. Try an assortment today and put an end to hooks that don't hold. Designed for ¼"-thick perfboard. The 32-piece assortment contains 6-As, 4-Bs, 6-Cs, 2-Ds, 4-Es, 4-Fs and 6-Gs. Black color.

Part #	Description	Price
TL-3500	32-Piece Talon Assortment	$31.71
TL-1015	(12) 1-5/8" L Straight	$11.64

INDUSTRY AWARD WINNING PRODUCTS

Confirmat / Firmit Connecting Screws

Ready-To-Assemble (RTA) and Knock-Down (KD) furniture can now be assembled with ease. Confirmat screws were developed specifically for edge-to-face joining of particle-based products like melamine board and MDF.
